Grand Monster slam was furry.

I'm not sure if it was ever ported from the Amiga, though.

Have Fun,

What's wrong with the DVI to ASCII viewer that comes with CS TeX.

It this new utility any better ?

For real portability between ASCII, TeX and everything else, I'd
reccomend UDO. (Just registered.)

Have Fun,
"Augeas"

I would leave it just as pub, as usual the FTP server is (I assume) more
than a single server and they use an Alias to the corrct server, this
may well change and using /pub/ does no harm. Quite a good site overall
BTW, I had to go there to get some stuff for my Mac too, lots of useful
software for all platforms by the looks of things.

3548. New OVL CAB for MiNTnet

Newsgroup: comp.sys.atari.st
Date: 1997-06-08 00:00:00 UTC
From: jdaddin9@airmail.net
Message-ID: <9D898EF655FA4C4C.31B55611D821DE4A.99E7F1C0958D194B@library-proxy.airnews.net>
Source record: 121291

In case everyone didn't read the UMICH weekly file update posted here, there is a new CAB for MiNTnet OVL v1.80 available. It can be downloaded from either http://www.umich.edu/~archive/Atari/Network/ or from http://people.delphi.com/~innovator/atari/ .

It works well with CAB 1.5 but it doesn't seem to like the 2.0 demo I have at all.

Mike Kerslake (publish@zetnet.co.uk) wrote:
: Hi all

: Simple question really:

: What's the best HTML doc to ASCII convertor?

: Er...is there one?

If you want to keep the formatting, you would simply load the HTML
document into text based HTML document display software such as Lynx,
then save the result (in Lynx, this would be accomplished with the P
command).

If you want to get the text out without the formatting, use search and
replace. Search for "<*>" replace with "". The * there represents any
number of any characters. If your software requires a regular expression,
it would be something like "<.>". This will remove all HTML tags.
You may have to do addition search and replace operations to get things
like the "&abc;" codes and what-not.

:
: >Are these results of CAB performance typical? Does anyone have a really
: >stable connection? Is CAB a viable WWW browser?
:

I've had very good luck with CAB 1.5 as compiled for the 030 processors.
I use Geneva, and STik 1.2 loaded as an ACC, and have found this to
be the most stable combination so far on my particular gear. I do get
an occasional crash...but then again, I get those running netscape or IE
on my Pentium too :(

Basicly, here's my set-up

Stock Falcon 030...120meg IDE, a couple of external SCSI drives, VGA, and
14meg of RAM. Sportster 33,600 baud modem.

c:/auto/jar10.prg
c:/auto/extendos.prg
c:/auto/sboot.prg
c:/auto/caf_fix.prg
c:/auto/floppy_fix.prg
c:/auto/hsmodem1 (I forget the exact file name)
c:/auto/hsmodem2 (I forget the exact file name)
c:/auto/NVDI.PRG
c:/auto/Diamond Edge shadow thinggy (name?)
c:/auto/geneva.prg
c:/auto/neoload.prg
c:/auto/stik_tsr.prg
c:/auto/sboot2.prg (name?)

c:/acc/control.ACC
c:/acc/NVDI.ACC
c:/acc/NEO_CLI.ACC
c:/acc/STIK.ACC

With this basic set_up, I've had great success with CAB/STik...
As for my TCP/IP settings...I guess I just got lucky, as the defaults
have worked for me since the first WWW package was released with only
the minor headache of getting the chat script configured properly.

Do you mean you want Speedo fonts for use with the original GDOS? If you do,
they won't work at all.

If you mean you want Speedo fonts for use with SpeedoGDOS, then you can also
use the wealth of Truetype fonts with Speedo v5 (though not with v4.x)

6-7-97 >>>>>> [][] ATARI Clearence SALE [][] <<<<<< 6-7-97

()()()()()

Item : Complete System
Computer : Mega 4 w/ 4mb RAM and TOS 1.04
Monitors : Monochrome (SM124) * AND * Color (SC1224) w/ Monitor master
Software : Over 100 original games (100's of disks!) plus
productivity software. Also MANY magazine disks
Comments : Also includes joysticks, Mouse, and a Modem
Comments : The Mega4 has the original box and manual!

Asking : $275 + shipping

I'll throw in whatever else you want (within reason) from the misc area
that your interested in.

()()()()()

Item : Complete External Hard drive setup
Host Type: ICD Link
Megabytes: 139mb formated
Type Case: Plus Impulse flat case
~ size : 13"(width) 2.5"(height) 14.5"(depth)
Comments : Includes DMA cable, Power cord, ICD software
Comments : Plug 'n Play - Autoboot w/ICD
Asking : $150 + shipping

I'll be happy to load the hard drive with shareware/pd software.

[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]
M I S C
[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]

If you want something listed below - MAKE ME AN OFFER!

Item : ATARI LAZER 'adapter' box. I can't remember what these are
called.
Comments: But they are the boxes that plug into the computer
and the lazer printer plugs into this box. Comes with the
Lazer printer cord. And 1 DMA cable (as it's built into the
box) This box also has a DMA pass-threw.

Item : 6 (?) MFM hard drive mechs.
Comments: I don't know what works, and what doesn't. They all did work
when I put them in the box, but I cannot test them at this
point.

Item : Blitz Cables
Comments: Allows you to backup your software fast and easy!

Item : ST Sound Digitizer
Comments: Made by Hippo, includes software and cartridge

Item : Video 1000-ST
Comments: Includes Cart and german (paper) docs. Screen rez enhancer (?)

Item : Video Key
Comments: Lets you hookup your atari to a TV

Item : Mouse Master
Comments: Lets you click over between a mouse and a joystick on 1 port
(usually 0)

Item : 1040 power supply
Comments: Needs plug put back on (which I still have)

Items : SwitchBack
Comments: Difficult to explain what this is. This lets you save anything
to RAM or a file. (Not the best explanation, but best I
can do)

If you have any questions, or your interested in one of the items
listed above, PLEASE Email me! All funds must be in US Dollars.
If you respond here, PLEASE keep the same title so that I can easily
find it.... I will ship ANYWHERE.

From: mhill@one.net
Message-ID: <865750452.7981@dejanews.com>
Source record: 121297

Hello all,

Ive been playing around with the Pacifist emulator and like it alot. Ive been trying to find some of my old favorite games to see if they work on it.

One game name escapes me though. It was a game where you kicked these little furry ball creatures across a soccer type field at your opponent. The goal was to get all the furry balls on your opponents side. You also had a bonus round where you kicked the creatures in the mouths of these monsters at different heights.

Anyone remember what the name of this game was? And does it work with Pacifist?

Some of my favorite ST games of old were.

Sundog
Shuffle Puck
Metrocross
The Pawn

Any help identifying the above game would be appreciated.

Hi Mike,

Yes, there is a prg called "Convert". It's author is Frank Vuotto. The prg was written in August 1995. I think I got it from U Mich about a year ago. It runs on Falcons and TTs. Is it the best? I have no idea. But it does work well enough. I'm just not sure where I found it ;)

>What jumpers do I need on what pins to upgrade a TT memory from 4 up to 16
>meg? I have inserted 4 x 4meg modules but it still only sees 4 megs in
>total.

Dennis Armstrong posted the following a few months ago and it worked perfect
when I upgraded my TT ram.

The atari TTFAST ram board (CA401058-xxx) uses 30 pin SIMMs.
The SIMMs may be 1M x 8 or 4M x 8 (9 bit SIMMs may also be used).
All 4 SIMM slots should have the same type (ie. 1M or 4M).
1M SIMMs give a total of 4Mb of fast ram, 4M SIMMs give a total of 16Mb.

The jumpers required are as follows:
SIMM type jumper W101 jumper W102 jumper W106
1M x 8 2 - 3 2 - 3 2 - 3
4M x 8 1 - 2 1 - 2 1 - 2

Starting RAM Address jumper W103 jumper W104
$0100 0000 2 - 3 2 - 3

Address Mode jumper W105
NON-BURST 1 - 2

Maggie 23 is what you want.. the editor has himself recently got a
Nemesis (I saw it in action, very nice) and he has penned a very long
and detailed article and review all about it in Maggie 23,
The ST version is available to download via my web page, or you can
find the Falcon version of the zine eeerm somewhere,

HTH :)

3568. Pine 3.96 - MiNT help needed

Newsgroup: comp.sys.atari.st
Date: 1997-06-08 00:00:00 UTC
From: apalmer@zapcom.net
Message-ID: <5nekqkiuo2@ultra.sonic.net>
Source record: 121311

I have been trying to setup Pine on my system. I am able to send e-mail and read news groups. The problem I have is pulling my e-mail from the ISP. I have set my inbox to {zapcom.net}/var/spool/mail/apalmer which should work. When I start up Pine it attempts to login but always fails saying the user name or password is bad. There is not enough information about imapd to configure it. I did enter the lines needed in /etc/services and /etc/inetd.conf but there has to be more to it. Anyone out there using Pine? I love NEWSie but need some of the features of Pine for e-mail.

Thanks,
al palmer

Hello,

We're looking for a memory expansion board for a 520STfm. We will pay up
to 50,-DM incl. shipping.

Offers via E-Mail to
becker@matheamtik.uni-marburg.de

Peter

3570. XURL 2.40 released

Newsgroup: comp.sys.atari.st
Date: 1997-06-08 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <41089611_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 121313
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

XURL version 2.40 is now avaiable from my web pages (see .sig).

New in v2.40 is support for the OLGA protocol. Thus enabling CAB2
to automatically reload the extraction page as soon as XURL
extracts URLs.

XURL extracts URLs from text files, emails etc. and places them in a html
file as links so that when loaded into CAB, they can be clicked on (saves
writing all those URLs down on scraps of paper).

For further info on XURL visit my web pages.

Regards, Gary

3571. CoSTa 2.20 released

Newsgroup: comp.sys.atari.st
Date: 1997-06-08 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <29939371_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 121314
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

```
CoSTa version 2.20 is now avaiable from my web pages (see .sig).

New in v2.20 is STiNG support, automatic handling of Bank Holidays, and
several bug fixes.

CoSTa keeps track of all phone calls made by:

NOS
ICE
MiNTnet
CoNnect
CixComm
STiK (via STiKtime and the STiK dialer)
Semper
TeddyTERM
STiNG.

For further info on CoSTa visit my web pages.

Regards, Gary

Go to hotbot and search for "true type font" and it will return a ton of
sites. Most of the ttf fonts I have downloaded work just fine. I have
stopped using yahoo and now use hotbot because not only does it return far
more hits, but it does a much better job of finding what I'm looking for.
A good site for truetype fonts is
<http://people.wiesbaden.netsurf.de/~kikita/>.
Use <http://www.hotbot.com> for you searches!

I've jus tried using CAB (under MagicMac) found the same situation, but decided, since it was my first real test, to wait a while. After a long time of getting "Resolving host. 0 bytes" the bytes then came through. After a further long wait the page appeared. Be interesting to know if this depends on the pages, and if so, how.

From: !ynoT
Message-ID: <33a8078e.42901868@news.airtime.co.uk>
Source record: 121327

I have some files with the extension *.obj and some *.3d2
I also have what seems to be an object viewer, however it does allow me to highlight sections of the 3d objects and change the colour, But nothing else ie: It doesn't seem to let me alter the size, shape or add to the graphics,

You can load a 3d2 file and save out as obj, when you do this, you also get filename.x filename.y and filename.z

I have a routine for loading and displaying these,

Ok what I need to know is as much info as possible, what they are, is there a true object editor, is it commercial, is someone out there already using it and can maybe make me an object... whatever?

Any ideas or information appreciated...ta :)

Ho yeagh!... if you have the software, is it Falcon compatable, this will help in deciding to use the objects in future software :)

Good. I'm planning on purchasing the full version of CAB soon, glad
to know that won't be a problem.

One other thing I noticed is that for some reason, after I exit CAB
when running the new OVL, I get a new entry in my ACC list that says
'CAB+MINTNET'. And half the time, I have some problems with the
scroll bars. But other than that, it is very nice!

I have a copy, of the dragon in both bmp and some other formats. y
daughter uses it as her favourite background on her PC. I beleive the
original was an opening screen from the game Rogue. (IN fact I am sure
thats where I first saw it).

If you're interested I can email it to you.

Tom McCartney

on a reelated note. What software will convert to x-image files that
magic will read correctly for it desktop pictures. My colours are always

3590. Falcon Games

Newsgroup: comp.sys.atari.st
Date: 1997-06-09 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <01bc755a$4d405760$aa3bd4cc@Primenet.Primenet.com>
Source record: 121133

Well, I was hoping a real gamer would respond to this, but I guess they are all too busy playing "Running," so I'll do my best to answer these:

In article <01bc71df$fbb01d40$d03bd4cc@Primenet.Primenet.com> you wrote:
:
: In the August '96 issue of ST Format there is an article describing
: some games on the Falcon, but it is not clear on the release status of
: them.There is Spice, a Defender 2000 type game, Willie's Adventure, which
: looks to be a really awesome Rayman clone, Radical Race, which seems to be
: a Super Sprint clone, Obsession Falcon, updated from the STe version I
: guess,and Road Riot 4wd, a 3-d driving game. Are any of these actually out
: and available?

I haven't heard of Spice. I have a playable demo of Willie's Adventure, which I d/l'ed off the Web. It is gorgeous, challenging and fun. I think you can find a copy of it (the demo) at ftp://128.120.234.42. I know a Super Sprint clone was just released, but it is called Power Up Racing. I've seen it in both the ChroMagic Catalog, and the System For Tomorrow Catalog (two US dealers), so I assume you can get it from most of the regular places. Obsession Falcon was never released, although the STe version runs fine. There was a Falcon specific pinball game released called Pinball Dreams. Road Riot 4WD is also available. Again, it is listed in both of the above mentioned catalogs, and if I had catalogs from other vendors I'd expect to see it in them.

: And if you have any other tips on obtaining cool Falcon games please
: let me know, I really want to collect all there is to collect, which isn't
: much I know, but as time goes on it will become more and more difficult to
: find anything at all for this obscure platform so I want to hurry before
: it's too late.

There are actually quite a few cool games around. I'd suggest, since you have Internet access, you e-mail your local dealer and ask for a catalog or listing. I don't know where you are writing from, but the e-mail addresses I have in front of me are:

ChroMagic = jimcollins@delphi.com
Systems For Tomorrow = sales@SystemsForTomorrow.com

Also, there are several games available, either the complete game or a playable demo, on the web. Try to get the "Running" demo. "Killing Impact" has a demo. There's a cool role playing / adventure game that I

forget the name of available at Joe Conner's "Interactive" web site
(http://www.cix.co.uk/~inactive/)

: Also what is a cool demo besides the Lost Blubb? And is there any
: software or demo or game that can show off 14 megs as opposed to 4 megs?I
: would appreciate any help.

Don't know anything about this. I only have 4 megs myself, so I haven't
pursued anything big.

H Julian,

best bet is a link 2 from System Solutions or Computer Direct. Also
buy HD DRiver much better then ICD drivers. There is another one from
system solutions that comes with HD Driver software.

I am having problems trying to load weather maps (.GIF) with
NVDI loaded. CAB can only display the weather maps when I disable
NVDI (version 4). I disabled all AUTO folder programs one by one but
CAB only displays the weather map when NVDI is not loaded.

Wensuite displays the weather map just fine with NVDI loaded.

CAB takes 70 seconds to display the weather map (with NVDI not loaded)
Wensuite takes only 10 seconds to display the map (NVDI loaded or
unloaded)

The .GIF was loaded from my hard drive for both tests.

My computer is a Falcon030 16 Mhz 4MB RAM.

Hi Ron,

Sounds like you got the one I had. I returned it as I was told more were on
the way. That was two years ago. I put the money towards another Falcon at
that time. A friend in Germany found me a ScreenEye that is in the mail
now. The Expose was an excellent unit, but alas it is not available now.
I figured that Floating Fish either took them in trade for the cost of
publishing the CD, or purchased them with the intent to debug the NTSC
problem and make a like unit for NTSC users. Shame, it would have sold
like hotcakes.

>
> I have some files with the extension *.obj and some *.3d2

The 3d2 is the Cyber Studio format for CAD-3D. The obj file
may be a NeoN Grafx file, or someother older type. Neon uses
obj as does another POV utility app for TT's and Falcons (forget
the name). Phoenix does save "objects" as well.

> I also have what seems to be an object viewer, however it does allow

I have a CAD-3D 2.0 package I had up for sale. It was a commercial
app, and some dealer still carry it. Dyna Cadd is also able to load
and save 3d2. I can load a DXF from the Mac or PC and save it to 3d2
for Phoenix (Zenomorph) or Chronos. The files can be edited under
Dynacadd or CAD-3D.
>
> Any ideas or information appreciated...ta :)
>
> Ho yeagh!... if you have the software, is it Falcon compatable, this
>will help in deciding to use the objects in future software :)

CAD-3D will run on a Falcon in mono mode, and under MagiC Mac in two
color mode as well. Phoenix will run on almost all Ataris, as does
Chronos and DynaCadd.

I think the manual details programmer information concerning the file
type.

All right, this is a loaded question(I am new to the Atari computer), but here goes:

Can only Atari hard drives be connected to the hard drive port? Are there any adaptors to let you hook other types of drives to it.

Did atari produce a high-density floppy drive for the ST(f,e)? Can a HD floppy drive be connected and used? Software needed if so?

I've seen mail about hooking a ZIP drive to a falcon, is it possible for an ST?

Please E-mail me at madcat13@planetc.com

Any help would be greatly appreciated. Thanx.

If there is, be forewarned that it's liable to be very, very slow. PC emulation on even an 060 doesn't hold a candle to a decent 486. On an 030, you're lucky to get 286-class performance. Very lucky.

All this is in the Atari ST Quick FAQ (URL in my .sig). Briefly:

1) Yes, SCSI adapters (most common, and easy to fit) and IDE (internal
mounting, a bit trickier)

2) There were Mega STEs with HD floppy drive. You can mount standard HD drives
to be used in DD mode. There are conversion kits for HD mode.

3) It will have to be a SCSI ZIP drive, with a SCSI adapter to connect it to
the ST.

Basically what would you need to upgrade an STF to an STE:

A blitter chip
A SIMM memory expansion card
A DMA Sound card (whatever that would be)
A TOS upgrade

Certainly not worth it. You can sell your STF for nothing, and buy an STE
nowadays for next to nothing.

>Thanks.

Create a mix track, double-click to get the map visible, then change the pointer to an arrow and double-click a fader (or any other object in the map).

You will probably find that the 'output' is set wrongly to MROS or Atari - hold down the ALT key and change this to 'DSP'. Still holding the ALT key, click OK.

With luck you should get the 'apply changes to all objects?' message, to which you should click OK. This directs all audio effects to the DSP - the best place for them ;-)

Now you've got to go and save the map - or you'll have to do this every time you use it!

HTH,

Jim

Cyber studio? great...this little prg I have loads 3d2 files and converts them to obj and also saves small x,y and z files,

YBH I am no artist and don't need an editing package to draw or make objects, I just want to add them to programs, I know people with Cyber so they can make them for me :)

>I have a CAD-3D 2.0 package I had up for sale. It was a commercial
>app, and some dealer still carry it. Dyna Cadd is also able to load

Well hopefully a Cyber package user can edit and send me a file:)

>> Ho yeagh!... if you have the software, is it Falcon compatable, this
>>will help in deciding to use the objects in future software :)
>
>CAD-3D will run on a Falcon in mono mode, and under MagiC Mac in two

So there should be no problem with displaying the resulting objects:)

>I think the manual details programmer information concerning the file
>type.

I have all the information and examples for displaying them in my program, in fact already implementing that side of it.. it's just that I only have a couple of example objects and would have liked a dedicated object for whatever softwqare I am using it for.. now I have an idea how to get one :)

Many many thanks,
Yours was what we commonly term as "Good Answer mate".... :))

Thomas Main (main@conrad.appstate.edu) wrote:
: Are these results of CAB performance typical? Does anyone have a really
: stable connection? Is CAB a viable WWW browser?

I never have problems with CAB, except when I run out of memory, but that
is entirely understandable.

CAB 2.0 beta seems to be very stable, and the new CAB-for-MiNTNet overlay
is brilliant, allowing data transfer to occur in the background while
other CAB functions can still be used as normal.

I virtually never have CAB 2.0 beta crash. I haven't used 1.5 for a while,
but from what I remember, 1.5 seemed to be fairly stable too.

: It works well with CAB 1.5 but it doesn't seem to like the 2.0 demo I
: have at all.

This is due to a bug in CAB 2.0. I understand it is fixed in the latest
release.

And BTW, the new overlay is _brilliant_! Just about all operations still
work while data is being transferred, so you can scroll through a document
reading it while you still wait for the pictures to come down, and you can
abort simply by clicking the stop button and so on. (It runs the data
transfer in a separate thread.) Highly recommended.

>font IDs, filesize wrong (or whatever) and a bunch of other things...
>(Does anyone know how I can get the error messages saved to a file?

Have a look for a file ASSIGN.ERR - it might contain them.

>I don't even have the possibility to do a "screen dump" since this is
>at the bootup phase).
>
>The funny thing is that the fonts are loaded and work!

I've a suspicion that the ones I got were not correctly built, being
PC ones. NVDI seems to be rather clever. It complains when it first
comes across them but will shut up about some of them on subsequent
boots. All I did was remove the fonts that it was still moaning about
after the second reset.

>But I can't say I trust the system when I get messages like this- all
>of a sudden the whole thing might crash, and I'm getting sick and
>tired of wasting time downloading/trying out stuff that won't work
>properly.

I've found the ones that NVDI stopped complaining about to be totally
reliable. I've a feeling it resolves some conflicts like similar ID's
by changing the ID's to something else - well they have some really
high id numbers, in the 32000 range iirc. Heck, they've worked ok for
months though!

Panasonic, Roland and Raven are all the same printers, and all use Epson drivers as default. I've had several, and used them on Ataris (Calamus 1.09n) and PC's (Windows 3.1 & DOS 6.x) with good results, using the Epson LQ drivers.

PC-Ditto was a software PC emulator. Slow, though useable for
basic utility programs and tightly-coded DOS apps.

There was also PC-Speed, which had an NEC V20 (an almost-286) on
a board piggybacked to the ST's motherboard. That gave good 286
performance and CGA screen. Had a very slight compatibility
problem though - Turrican doesn't run with it installed :(

Hello.

Can anyone describe the pinouts of an ST colour monitor, and how to
make up a cable for it ? An ICTARI reader needs to know...

Have Fun,
"Augeas"

> Is it:
> a) similar looking fonts in different sizes with the same IDs?
> b) same as above but also with the same font names (not file-name for the
> font, but the full name of the font)?
> c) similar looking fonts, but also in bold, italic, super/subscript format
> etc?

c) is the closest. :^)
A font would be a typeface in a point size.
They are called a font as they used to be set in lead type, and so a
font
would be, for example, Garamond 8 points Bold. Another font would be
Garamond 8 points. Yet another font would be Garamond 8 point Italic.
A typeface is Garamond. A Font family is according to the style of the
typefaces in it. Sans serif are all those fonts without serifs.
Serif are all those fonts with serifs. That's how most body
text fonts break out. Then you can break fonts down according to
Cursive(handwriting, calligraphy, ...), Headline(Decorative,
Oublique,...)
Most body text fonts(like the kind you see in a book) can also work
as Headline text for example, but headline text fonts, cursive fonts,
special fonts, etc do not work as body text.
My favorite type of body text are serif fonts, something like Garamond
or
Goudy- the older ones.

> Should I give the same looking fonts (in different sizes) the same ID?
> Should I also give the same ID to those in bold/italic etc. or are they
> to be looked upon as a different font entirely? What about in "Papyrus"-
> are they to be put in the same family?
> Any help/hints regarding this subject greatly appreciated.

Well technically speaking, those would all be different fonts, but you
are also talking of font ID as seen by Speedo or NVDI, non?
And as to that I don't know what would happen if you gave different
fonts the same ID. I would give each font different ID, so that
Casablanca Bold would have a different ID than Casablanca Normal.

The correct URL is
http://www.umich.edu/~archive/atari/Mint/Network/cab-mintnet-180.tgz

>or from http://people.delphi.com/~innovator/atari/ .

>It works well with CAB 1.5 but it doesn't seem to like the 2.0 demo I
>have at all.

Which version of the demo do you have? I have tested with the current demo
as well as the latest CAB 2.0 beta's, with no problems.

To everyone - email me with the details of any problems you encounter while
using this overlay. That's the only way I'm going to be able to find about
problems that need fixing. (Makes sense, doesn't it?) If you don't give
meaningful feedback, then there's nothing for me to go on in regards to what
needs improvement. Yes, it's freeware, no, you don't have to register it or
pay for it, but if you use it and want to see it get better, you *do* have
some responsibilities to fulfill.

Don't make me come after you... }-) After all, the only reason you're using
this overlay is because you're on the internet. I could very easily have the
overlay automatically email me a registration notice the first time you start
it up...

Fontkit can convert Calamus vector fonts to bitmap fonts and Fonty (also
from the FaST Club UKP 11.95) can convert Postscript Type 1 fonts to
Calamus fonts.

Many TrueType fonts knocking around have PS equivalents often on the same
disk or the same site.

3640. Bad Mood - Doom Clone !

Newsgroup: comp.sys.atari.st
Date: 1997-06-10 00:00:00 UTC
From: Simon Yardley <si@zetnet.co.uk>
Message-ID: <339DCEFB.53D2@zetnet.co.uk>
Source record: 121088

Hi Guys n' Gals,

Just in case there are some of you not following the Bad Mood mailing list ...

In the last 2 weeks or so there has been a flurry of versions released.

These include additions for the Collision Detection (now 95% complete), full ambient sound (beta but very nice), new Warp effects for the water bitmaps (very nice effect!), map improvements (on the TAB key). Plus good improvements in the 3D engine ...

You need to have a full Doom1/2/Heretic WAD file to test the game though ... but the Doom1.wad (shareware) is on my site in ARJ format ...

Grab the latest ZIP files from my site at :

http://www.users.zetnet.co.uk/syardley/files/bm/

The bm221wrp.zip file just has a binary file for this lovely warp effect!

BTW for speed freaks the latest version (with Nemesis) starts off in the Doom2.wad file (on Map 01) at 7.92 Frames per/sec, full screen. Kewl !

Send me an e-mail if you wanna know more or join the mailing list with the subject: subscribe

mailto:bad_mood-request@rand.thn.htu.se

If you want to help out as well then feel free to do so !
Either sound/graphics/coding/sprites/artificial intelligence ...

Cheers,

Simon

No. I've seen various programs that claim to be MULE clones, but none of
them comes close to the original, in my opinion.

You can emulate the 800 on your ST, and play the original :-)

Message-ID: <339E025D.182B@cadvision.com>
Source record: 121093

Matthew! I have Fonty - terrific stuff - I use Fontmonger on the Mac to convert True Type fonts and Mac PS fonts to PC fonts and then use Fonty to convert them to CFN. Also, I get to use the PC True Type fonts with NVDI! Speaking of which, is there a conflict between Fonty and NVDI? I can't run Fonty with NVDI running - all I get is a screen in Fonty that looks like a corrupted TIF file ro something like that. If I reboot without NVDI, Fonty works fine.

Are there some kerning tricks I could use in Fonty when converting PS files to CFN as I find some fonts don't have proper kerning when I open them in Calamus even though I've told Fonty to kern the whole font. Also, are you going to implement the typeface bit image function? Presently I have to run all my fonts through the Calamus FontEdit accessory to get the display I want in Calamus.

Thanks for a great program Matthew!

Keith Brooks

3646. Another CAF2.06 Question

From: guitarmn@earth.execpc.com
Message-ID: <5nl4mo$2ag$1@earth.execpc.com>
Source record: 121094

Boy, the answers to my last query sure helped, so here we go again:

How do I record effects fader movements?

And another:

Are there any other modules except for studio and cue trax?

Another:

The "import" function in cue trax makes the machine bomb out. Is this a bug or just my bad luck?

Finally:

To use adatrec.prg do I need the adat hardware piece or can I use the FDI? I don't have an adat, but will need to grab tracks from one in a few months (I can edit at home and save on studio costs).

Thanks in advance. As an Atari lover I find this type of constructive interplay invaluable, and rare in a lot of other platforms.

Have a look to a part of DOITF030..

You can use the following 'standard' 2.5" ide devices.
They all works well.

----cut--------

Hersteller Bezeichnung Kapazit&#65533;t Bauform

Hitachi DK222A-54 540 MB 2.5"
Hitachi DK212A-81 810 MB 2.5"
Hitachi DK212A-10 1.0 GB 2.5"
Areal MD2085 80 MB
Fujitsu M2637T 240 MB
Conner CFN250A 250 MB
Conner CP2064 64 MB 2.5"
Quantum Daytona 500 MB
Seagate ST9077A 2.5"
Quantum Europa 1.08 GB 2.5"

----cut----------

And i'm sure we found a lot of drives with more as 1 gig
Also i have a complete description to replace the internal ide, but it is in german..

My girlfriend made an interesting observation on Sunday. She compared Atari
owners to Harley Davidson owners. I asked her what she meant, and she said
she was referring to the dedication of Atari owners to their machines, and
and how in-depth their knowledge of their machines was.

I realize that that's off on a slight tangent, but I thought I'd throw
it in.

I just got my issue 4 at the end of last week (I subscribe through Systems For Tomorrow). So it looks like we are nearly an issue behind, thanks to postal lag. I suspect you'll get your issue four shortly, and your issue five will be some weeks off.

Ah... anticipation.

I've got an old soft case for the portfolio. You can have it for free,
but you'll probably have to give it a thorough cleaning :) It has been
in with a lot of miscellaneous junk for about three years-when someone
stole my Portfolio.

>Oh... that someone is crazy enough to buy the stocks? :-)

Well, you could add stupid, mislead, misinformed, or manipulated. Still,
no one WANTS to lose. The problem with these dollar stocks is they are
usually controlled by a few players. When you "roll the dice" they may
be "loaded", in which case, you crap out ;(

>On the other hand you can't realy lose at 1 dollar a share, atleast not
>much. You can on the otherhand makes lots of money if the mange
>to sell those drives.... but I realy wonder if they will mange to do it
>atleast as long as the Tramiels are involved. Maybe they have left?

Competition in the HD market is fierce. If JTS does show results, they most
likely will be acquired by Seagate, Toshiba, Fujitsu or someone else.
IMHO, JTS, because of it's stock value, is on shaky ground, but not because
it's located in earthquake prone Calif. If I could visit the facilities
in Madras, India, I might could get a better understanding of truth/fiction.
Any Atarians in Madras, India? As far as I know, the Tramiel's are out. Out
on a yacht smoking Cuban cigars and sipping Chevas Regal.

>BTW. Can I buy stocks for sweden?

Magnus, you can do anything you want :)

>Maybe you will be able to buy Atari from JTS if you mange to make lots
>of money? THAT would be so cool. :-)))))

No-no-no. I'm just a "flea" riding on the Dog's back. I don't want to OWN
the Dog. I just want to hitch a ride without getting squashed :) Besides,
I think JTS should give all things Atari to a few Universities, Europe and
USA, as a tax writeoff. It would give'em free publicity, etc. which could
give the stock price a bump up :) They never had any intention of develop-
ment. The merger prospectus confirmed that.

Charles

rp> How to format a IBM HD-80mb SCSI on an Atari Mega STE4. HDX 2.0
rp> doesn't do the job. Can Supra Format do it?

Funny!! Formatting should be the simplest operation.

What adapter/driver are you using? Does the IBM identify itself correctly
when the driver loads? It is possible that the IBM has parity enabled and you
host adapter cannot support this.

By all means try any other formatter.

I would like to first off thank EVERYONE who helped me get my SpectreGCR working fine. I have it set up now and I can get on AOL and other services that I was unable to before. Anyway...does anyone know if I decided to hook up the cartridge to a Falcon or TT it would emulate something else besides a Mac Plus? Or would I have to get a newer version of the software? I am wondering would it be a Mac II or better if I had a better processor than the 68000 that the STe has?

AFIK you can't plug a ST cart into a Falcon. The two ports are different.

You can use drives of any capacity with the Falcon IDE interface. You
won't have to format your drive, partitioning is sufficient. SCSI and
IDE drives are already factory-formatted. Note that some IDE mustn't be
formatted at all, they may be damaged when formatting them. (This is no
joke!)

Source record: 121151

On Mon June 9, Jo Vandeweghe wrote:

>Is it possible to convert icon files .NIC to .RSC ?

To get my NeoDesk icons over to Ease (which imports RSC) I did screengrabs of them while in the NeoDesk icon editor, which were then imported into the Ease icon editor as X-IMG files and clipped. If I remember correctly, for me anyway, Icon Juggler and one other editor had trouble converting the colour NIC icons to colour RSC format, hence the screengrab workaround.

>It's really just a question of trial and error as I see it. Not ideal, but
>even MAC and PC owners have these problems, so we are not alone!

So true... a great deal of the problems experienced with CAB comes down to its OVL and how it communicates with various HTTP servers and the browser itself.

The biggest problem seems to be the odd site where no graphics come in. Recently I changed the hosting site of my own Web pages. Ends up the graphics don't come in now. Other sites illicit this problem, too, notably www.atari.com. Having this problem hit a little too close to home, I looked into what was different about the new site. It's actually a virtual domain running under Windows NT 4.0 webserver software. The CAB.OVL misinterprets an HTTP message sent out by this server. Even NEWSie's Open URL has trouble fetching a GIF from this HTTP server (like CAB, HTTP error 406 is generated). Only 8-bit files are affected, though (like GIFs and ZIPs, etc.); some form of encoding problem.

To see how robust your CAB.OVL is (all flavours) go to the URL www.excelprinters.com/406.htm and try the links. Some of them -- which were compiled by Charles Silver -- may actually crash CAB (for me and him anyway). Also on the page is text with an explanation of this somewhat mysterious problem.

From an offline perspective, CAB 1.5 and 2.0 are very robust. It's that darn 'connectivity' that gets in the way sometimes.

Bless Dan Ackerman's work -- I'm sure he'll fix this problem soon.

Hi,

Has anybody experienced problems with ordering goods from ICD in the US. Over 6 months ago I ordered and paid for a new AdSCSI+ card for my Atari, and despite many Emails and phone calls I am just getting the run around. I have had so many excuses, that I am unable to recall all of those given, but regardless of my chasing I still have no delivery date, and just a promise that I will get it soon.

I would like to try and circumvent the Anti-Sales department and talk directly to their CEO about this, but I can not discover his name.

If anybody is having similar problems or can help I would be grateful.

Many Thanks in advance

Don

The clipboard in the NeoDesk icon editor uses XIMG format (the mask is stored in ICON.MSK, IIRC, though it is an XIMG file). So you can copy them from one program to the other this way as well.

No, there is only one server with 2 CPU ;-) but with several disks....
and the directory can change from one disk to another (for example, now atari has moved from pub4 to pub6). So, you must use ONLY /pub/atari.

Maybe you ran out of memory. If there is not enough memory left CAB just
leaves out the pictures.

3688. For Sale

Newsgroup: comp.sys.atari.st
Date: 1997-06-10 00:00:00 UTC
From: All@Sea
Message-ID: <1413_All@Sea>
Source record: 121173

The following items are for sale. If you would like to make an offer, please do. I can be contacted by e-mail at algy@allatsea.demon.co.uk or by Netmail. Also by BBS/Fax on 01203 601448 24hrs a day.

1) Epson Stylus Color 200 Printer.
Includes Mono and Colour Ink cartridges and boxed with manual. Only a few months old but I have bought a newer model so no longer require this one.

£100 o.n.o

2) Atari Falcon. In a Tower case with external keyboard and includes the following: (PLEASE NOTE: I will not be splitting this package unless someone wishes to buy it without any of the following, so please don't ask for individual items because the answer will be no.)

14Mb RAM
PowerUp 2 accelerator (to 32Mhz)
ScreenBlaster (screen resolution expander)
Double Speed SCSI CD ROM
65 Mb original Internal IDE drive
170Mb SCSI Drive
1.44Mb Floppy drive
68882 FPU
14" SVGA Colour Monitor

Also included in this package:

Hardware:
USRobotics 14,400 Sportster Modem
Tabby

Software:
Extendos Pro
Magic 5
NVDI 4
Ease 3
DA's Picture
TruePaint
Studio Photo
Apex Media
Fonty
Calamus S (German version)

I am looking for £1000 or the very nearest offer to it, offers are invited provided they are not ridiculously low, higher offers are very welcome of course ;-)

I have most of the manuals and original documentation for the above,
including the Falcon itself.

3690. Help ST ROM

Newsgroup: comp.sys.atari.st
Date: 1997-06-10 00:00:00 UTC
From: lector@colomsat.net.co
Message-ID: <865959041.14047@dejanews.com>
Source record: 121175

Hi fellows!

I recently fryied my ROM chips (don't ask how!) However I sort of backed them up using a rom downloader. So I've got this file rom.img and I'd like to know if I can make a bootable disk with this image. I once had a very old 520 ST no rom chips that booted from disk, so I think is possible.

Any help appreciated.

Thanx a lot.

It is important that the last SCSI device in the chain is terminated.
If the ZIP is the last device in the chain you have to remove
the termination resistors on the harddrive and
have termination on the ZIP-drive active.

3698. Good News For RGB Users!!!

Newsgroup: comp.sys.atari.st
Date: 1997-06-11 00:00:00 UTC
From: ab453@cleveland.Freenet.Edu
Message-ID: <5nn6eh$dbf@alexander.INS.CWRU.Edu>
Source record: 121033

Good News For RGB Monitor Users!!!!

A new product, the VideoTurtle from Turtle Enterprises, is now available!
This product converts RGB known as TV RGB, into S-Video signals. Replacing
the need for an older TV RGB Monitor.

ANY SYSTEM, that outputs TV RGB, can use the VideoTurtle. Some of the
many are:
Sega Genesis/32X/CD-ROM
SNES
Amiga
Atari ST
Neo Geo
Apple IIgs
Laser 128
MSX II/MSX II+
Adam
Commodore 128
TV RGB Monitors(for uses other than computer/video games)
Video Arcade Games, ones that output RGB.
IBM CGA

Also, all of your video modes are supported too!

Please, no flaming! If interested in the VideoTurtle from Turtle
Enterprises, please email me-ab453@cleveland.freenet.edu

Thank you!

That's funny, you're the first person to report problems with 1.5 and
success with 2.0. Everyone else who had problems went the other way around...

>>And BTW, the new overlay is _brilliant_! Just about all operations still
>>work while data is being transferred,

>For the moment I can't say that. Maybe my mint.cnf and/or stik.cfg is
>wrong. Are there special things I must keep in mind?

The overlay uses MiNTnet, stik.cfg has nothing to do with it.

****
MAJOR MISTAKE in 1.80
****

I compiled for 68000, but linked against 68030 libraries. The currently
distributed binary will not work on regular STs. Sorry, I had completely
forgotten that I had changed my default libraries a few months ago. You
can always rebuild the source yourself, since it is all provided, and link
it properly.

Also - I've tracked down a few more of the bus errors people have been
reporting; expect a proper 1.81 release fairly soon. I will be deleting
the 1.80 file on atari.archive.umich.edu and replacing it with 1.81.
The 1.81 release is also more compatible with HTTP 1.1 servers, although
I don't think I've reached full 1.1 conformance yet. The 1.81 release
uses Accept: and Host: headers now. I will also be adding Accept-Encoding:
headers, so that URLs can be downloaded in gzip and compress format, for
even faster network downloads (at the expense of CPU time to uncompress.)
To use it, you will have to set an environment variable GZIP pointing to
the full path to your gzip binary. The overlay will fork/exec gzip when
it needs it.

I have been considering adding support for Cookies, since a lot of these
search engines and other sites tend to use them a lot. Any thoughts? My
only reservation about this is that it introduces extra file handling that

I didn't want to do.

Should the overlay use a text config file for options, instead of
environment variables?

The now defunct German death metal band Pestilence also apparantly uses
Atari. On their last album, Spheres, the say:

Pestilence uses in the studio:

<long list>
Atari 1040st computer
Steinberg Cubase sequence

I thought that was really cool when I read it.

3709. ** FS (US): Atari STe **

Newsgroup: comp.sys.atari.st
Date: 1997-06-11 00:00:00 UTC
From: quantum@sunlink.net
Message-ID: <5nmen3$r61@mars.sunlink.net>
Source record: 121044

Hi! I have an Atari STe rotting away in my sister's room after I upgraded to my new Falcon. I'd love to get a VGA monitor for it, but dammit I just don't have the money :(However, if some brave soul would like that STe system, we will be very happy campers. Here's what the setup includes:

Atari 1040 Ste w/ 1 (maybe 2) Megs of Ram
Atari SC1224 Color Monitor
If desired, I have a 2400 baud modem I'll be happy to throw in free.
Good amount of software that my Falcon can't run, including:
Hard Drivin'
Ballistix
Populous II
Stereo Master (digitizer)
Laser C (w/ manual)
HiSpeed Pascal (w/ manual & my old Pascal book from Intro Programming my first year at college (only 2 years old))
Warp 9 Registered Version (excellent speed up program!)
Plus other little shareware gems I've picked up if desired..

I'm asking $350 (obo) for the entire package plus shipping and handling from the Poconos, Pennsylvania, to wherever the heck you live. The computer and all software includes original docs, software comes with original covers. Computer is in perfect condition except for the right shift key is broken. Other than that, it has been an excellent and dependable machine over the years.

Please email all responses to the same address as this letter is from, quantum@sunlink.net. I wish I had time to read this great newsgroup for responses, but alas, I cannot... :(

Thanks in advance, look forward to talking to you,
George Garner

Sorry me for using a reply, but I didn't know how to enter on Calamus discussion
by better way...
I'm a registered user of Calamus in Spain. I have a long time problem with hipe-
nation, and the only way I have found is to build a SPANISH.CWB dictionary by
myself, but using a FRENCH.CWB dictionary for the rules (I think they are commonbetween
Spanish and French). I've been trying to contact with a French dealer to
ask for a FRENCH.CWB even If I had to pay for it, but had no response. :-(
Can anyone give me a way to get that French dictionary?
Best Regards to all. Alberto.

: wrong. Are there special things I must keep in mind?

STiK has nothing to do with this, since you are using MiNTNet. For me,
installation was straight-forward. I just copied the new overlay into the
CAB modules folder and it worked easily. I did not have to change any
other files, although if you use memory protection, you must ensure that
CAB is set to "global".

Not being able to boot from copy protected disks or disks that use the
bootsector to load.

Did you reformat/partition the disks? If you use a PC formatted disk,
it appears to work for a time but the data seems to just get lost.

Not without special ROMs. I serviced many ST machines and know for sure
that every ST has ROMs in it. Ones that needed bootable disks were
equiped with small ROMs with boot rutine instead of TOS. Without any
ROMs in it, ST will remain unconsious, with or without boot disk.

>> Any ideas on what the problem could be??

I'd suspect that there is some oxides on the connector - either on the
cartridge or in the computer's connector.
Another possibility would be if the small fuse for the cartridge port's power
has blown (that is, if the scanner has an external power supply and doesn't use
power from the port).
Still another possibility would be if your 68901 chip has blown. I've stumbled
on this in one machine where all programs worked except Cubase - which gave the
"no key" message...

I hope this helps - best regards,
Claes

On 10 Jun 1997, guitarmn@earth.execpc.com (Cory Bonnett) wrote:

>Boy, the answers to my last query sure helped, so here we go again:
>
>How do I record effects fader movements?

I've snipped the rest 'cos I can't answer them, but I'll take the easy one! Here we go.....

To record effect fader movements you need to change the box at the top-left in the mixermap to "Write" instead of "Local" (I think the maps usually default to "Local" so that you don't overwrite your precious settings).

Once you're in "Write" mode press PLAY (not RECORD as you might expect, mixermaps work differently to the other types of track) and move the faders about. Stop the piece, REWIND, press PLAY and watch the faders moving in a spooky way :)

There's another option, "Replace". I find this one a bit tricky to use successfully so I don't often use it. I prefer to edit my mixes using list-edit as explained below. BTW - If anybody has good tips for using "Replace" successfully I would love to hear them!

You may now want to tidy up your mix for all or some of the following reasons:

o You accidentally moved faders when you didn't want to
o Some of your fade-ups are too slow
o Some of your fade-ups don't reach the correct level
o Old 'fudged' attempts keep showing up erratically in your new mix
o You want to have all volumes on zero until the track starts

Come out of the mixer screen, keeping your changes, make sure the mix track is highlighted (it should be already) and go up to the EDIT menu and click LIST. You will then see your efforts at mixing displayed as events in a list - this also brings home the importance of using sensible names for mixermap objects. These events can be edited to take out incorrect fader movements and adjust the timing of those that fade up or down at the wrong place. You can also highlight an event (ie. main volume) and then mask the list so that only the highlighted event is displayed - very useful if you want to drop one track (ie. guitar) down for a middle 8 and then bring it back up afterwards. List-edit for mix tracks is very useful for doing accurate fade-outs, too.

Hope that helps!

Jim

PS. I had been using CAF for about a year when I accidentally
discovered that you could list-edit mix tracks. RTFM indeed ;)

Hi, does anyone know about an old Atari ST strategic game called "War in Middle Earth" and if it is available somewhere? I think it was the first tactic game I ever played but I don't remember the company or if this company still exists. I would like to try it on Pacifist (or does a PC version exist?).

As far as I know SoftPC runs only on 68030, so it will run neither on
STFM nor STE.

A lot I should hope, you should have a look at how much a brand new STe sells for and the amount of software for it, and YES there still are brand new STe's that have never been sold but some have been upgraded.

It certainly won't. IDE is a different type of connection altogether -
how do you intend to connect an IDE drive to a SCSI chain? You need an
IDE interface to connect an IDE drive to an ST.

Yes, but that doesn't mean you can't create a program that will boot TOS
from disc instead of the one from ROM - there are, in fact several such
programs - one is called KAOS. This one boots its own TOS 1.2 clone, but
there were also TOS 1.0, 1.4 and 2.6 booters.

I've never managed to get any of these programs to run on my STE, with any
version of TOS.

But I beleive that there has to be at least some code in ROM telling the ST
what the boot sequence is, that it has to load TOS from a disk, starts
spinning the disk drive, how to read the disk, how to read the bootsector,
etc...

If you have no ROM at all, your ST will probably just sit there with a blank
screen. It won't even start spinning the disk drive.

>is the firm still alive, are there some projects of new atari computers
>?

Atari is dead. The name was bought by JTS (a half-dead hard drive company) as a tax payoff. JTS is about to die and there are no plans whatever with atari.

The last computer was the Falcon030, that they stopped supporting immediately after launching the product. Then they launched the Jaguar games console, and failed, and went bankrupt.

However, the machines are far from dead. They are still strongly supported with a great user base. There are modern WP packages, internet tools, web browsers, multi-tasking OS, Hardware expansions, etc... Some companies are building TOS clones such as the Hades or Phenix, with 68030, 040 and 060 processors.

So, in sense, there are new computers, but not from Atari.

Being french, you might want to hang about the fr.comp.sys.atari newsgroup, although it carries more disputes between atari vendors than real information.

And you can always take a quick look at my Quick Faq.

>put you in a text adventure!

Time Bandit was one of the very first games released for the Atari ST and one of the best. One space sector was actually a Star Trek game, with some adventure/text elements involved. You had to interface with the computer to determine just what the heck was going on in the ship. You had to then use the transporters to go down to the planet and mine dilithium crystals. I won't give away any more.

One of the sectors was a Pac-Man type world. There were several outer space related sectors, some dungeon & dragon sectors, western and pyramid areas. That's all I can remember.

Another great element of the game was split screen 2-player mode. You could work together or against each other. If your opponent wasn't alert, you could lock him in the jail cell in the western sector and he'd be stuck there forever! And the 2-player game didn't end if you or your opponent died. Whoever was alive could continue with his game, and the dead player became a ghost who could still be involved in the game.

Man, I have to play this game again when I get home! This is truly one game that should be considered a 'classic'! It's a shame it wasn't ported to more systems.

I don't know if it is the cartridge port, that should theoretically be
the
same to keep backward compatibility. But there is no floppy port on the
Falcon, and probably there are other reasons as well. In any regard I
have
hooked up my GCR to my Falcon, to no effect. :^)

I have fixed this and now the recent versions of Fonty work fine with NVDI
I improved the kerning routine and speeded up the curve drawing a while
ago.

>Are there some kerning tricks I could use in Fonty when converting PS
>files to CFN as I find some fonts don't have proper kerning when I open
>them in Calamus even though I've told Fonty to kern the whole font.
>Also, are you going to implement the typeface bit image function?
>Presently I have to run all my fonts through the Calamus FontEdit
>accessory to get the display I want in Calamus.

I improved the kerning routine and speeded up the curve drawing a while
ago, as well adding a filled character view option. Now on conversion from
PS the font has the basic character width it had in the PS font without the
kerning pairs. The auto kerning routine sucks the kerning outline to the
character outline plus any figure specified.

I should really generate a proper bit image writing for the label.

>Thanks for a great program Matthew!

Thank you for buying it.

1. Works fine with Falcon,
2. 4 full size slots,
3. 200 Watts power supply,
4. 3 fans (one inside the power supply),
5. SCSI ID switch on the back,
6. Resistor built in (to start the power supply even if the load is small)
7. Cream color, AC power cable, good condition, LED on indicator.
8. All you need is a 50 pin Centronics to SCSI 2 cable.

Price: $85 obo Buyer pays shipping. Send COD.

Hmm, this doesn't sound like the Time Bandits I played on my Coco. It
sounds a lot more robust. Time Bandits on the Coco was much more
similar to Tutankham, but with four "worlds", like Western World,
Hyperspace, Medieval World.

>Man, I have to play this game again when I get home! This is truly one game
>that should be considered a 'classic'! It's a shame it wasn't ported to more
>systems.

There is a clone available for Windows. It sounds much closer to the
Coco version than the ST, however. It came with one of those
WizardWorks Game Packs (now available on CD). It's called "Time Warp".
I did a search for the author, wondering if he ever did an update, but I
couldn't find anything on him. Here he is from the About box:

Hi All,

I currently have two Atari's connected together via a serial cable. I have been playing around with a Client/Server setup. I have MiNT, MiNTNet and MinTOS running on the Server, and STiNG running on the client. I use the 'slattach' program to connect the Server to the Client via a SLIP link. I know the connection works as I can quite happily PING each machine. My problems start when I try run Client applications that connect to the server. In any of the application if I select open host and enter a different IP address to that of the server the application will just sit there an eventually time out as expected. But, if I enter the IP address of the server the server's Hard Drive whirs, and a connect message appears on the console screen, but then the Client application crashes out with a bus error. So far I have only just managed to get Telnet working (allways on the second attempt), but FTP, Mail and Http (CAB) all crash out. FTP reports that it has connected but then crashes, CAB says receiving data, but then crashes and Mail simply crashes. Does anybody out there know what I am doing wrong, or can offer me any suggestions as how I could fix this problem?

Thanks,

Ben Hills.

From: ben@imperial.co.uk
Message-ID: <866096892.20921@dejanews.com>
Source record: 121050

Hi All,

I have recently installed a copy of Geneva on my Hades and I have
now found that I can no longer run applications with the Ease
desktop. Running Geneva and Ease on there own causes an alert box
with "Cannot run program" do be displayed when launching applications.
With MiNT runnning as well, launching applications causes the whole
system to crash. I have tried other desktops such as Thing without
any problems, but as I have spent money on buying Ease I would like
to use it. I know that release 6 will be out in a few days, but I
don't know if this will resolve the problem.

Does anybody have any ideas?

Thanks,

Ben Hills.

> it compare to Expose'? Thanks...! :)

Overscan in Germany carried the Screeneye when it was in production.
There was a thread in the maus group about the "Last Screeneye" that
Patrick had found in his shop. That was it, and no more are being
manufactured. Shame about both of the units.....
I was lucky enough to have Robert keep a watch for one to come up for sale.
I don't know how it will compair to Expose. It would have to be pretty good.

You must configure you Net$cape to send mail address as password when you
log to the ftp server.
But use a *REAL* ftp program, because Net$cape make a ftp connection each time
and the number of user is limited on ibp.

Try the latest version of GrafTool -- it's supposed to have a slideshow feature now. Do a search for GT970601.LZH. You'll have to get by its German-only docs, though. It's registerware (via e-mail) and is very fast.

Commercially, Imagecopy has a great slideshow feature.

It does the same thing to me with MSIE, and I can't use a real FTP connection
because of my employer's firewall. What I liked with CNAM was the http
interface. Will this be updated or is that gone for good ?

3768. Pacifist Unsynced?

Newsgroup: comp.sys.atari.st
Date: 1997-06-12 00:00:00 UTC
From: Gary Wheaton <snapper@dial.pipex.com>
Message-ID: <01bc771e$0bc02fc0$LocalHost@snapper.dial.pipex.com>
Source record: 121058

Does anyone know why pacifist, even though the author
claims it's over 2x faster than a real ST, runs jerkily?

e.g. If running a scroller that should be very smooth on a
real ST, it goes jerking by on Pacifist!

I think it may be due to the fact that the PC monitor is
refreshing at say 70HZ and the ST video is 50 or 60HZ.

Any ST music is playing at the correct speed, so I think
Pacifists VBL interrupt is going at 50HZ.

Does this jerkiness happen on everyone's PC ? Or is it
my video card/monitor?

Incidentally, I have a PC engine emulator, running on my
PC (P130 16Meg) and that runs/scrolls very smoothly.

The PC engine was designed to run with a PAL 50HZ TV
set (the euro vsn anyway), so it's similar in video output
terms to an STFM.

So, is it that Pacifist doesn't set the pc video mode to
an ideal (50HZ refresh) mode, or what?

Pacifist is a really great emulator and it's getting better
all the time, but this jerkiness is annoying.

I hope someone mentions this problem to the author
as it would make pacifist immediately look 100% better

I mailed him and emailed him a couple of months back
but got no reply... Even though I sent some cash. I didn't
mention the above points at the time.

If anyone has any ideas, please mail me as I will not be
online for a few days.

Gary.

I tried for quite some time to get Ease to run under Geneva, with the same results as you (except for the MiNT part, which I don't use). The Ease manual has a section on using it with MultiTOS (as I'm sure you know) but the inclusion of 'shell C:\EASE\EASE.PRG' in the GEM.CNF got me nowhere. I'm a happy NeoDesk user, though, so this wasn't a big loss. Still, I'd certainly like to know if Ease/Geneva can co-exist.

t> a Zip have similar problems?

I don't have a ZIP but this sounds like a termination problem.

Is the ZIP the last device on the SCSI bus? If so the termination on the
preceding device(s) should be removed and the ZIP terminated.

Termination is usually done by resistor packs (near the HD SCSI port) or by
jumpers.

3780. Papyrus5 from HiSoft?

Newsgroup: comp.sys.atari.st
Date: 1997-06-12 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@sunderland.ac.uk>
Message-ID: <33A019D8.7B50D645@sunderland.ac.uk>
Source record: 121070

Hi,

Has anyone managed to buy Papyrus5 (english) from Hisoft? It is
mentioned on their Bargain page:
http://www.hisoft.co.uk/bargains/

"Atari Productivity Pack - Not Yet...
Yes, we know you're out there! And this one's for you... The
only-just-released Papyrus 5 document processor plus the renowned Twist
2 database; perfect companions at the right price. 2.5MB plus HD
needed."

I don't know how the Bargain Shop works - it seems to be only open at
the weekends. I can only access the web during the week, so I can't
prove this.

I've emailed sales@hisoft.co.uk but had no reply. So if anyone has
managed to obtain Papyrus5 either from Hisoft or anyone else could they
let me know where they got it and how much they paid for it.

Thanks,

Michael

Has anyone heard of Atari Teenage Riot? They are a heavy industrial type of band.. some really wierd but cool stuff! Do they use Atari? Or did they just wanna use the name? The singer is always wearing some kinda of Atari shirt.. He has quite a few different ones too! I'd love to get a few of them! :)

>/Mirrors/ftp.uni-paderborn.de/atari/tools/util. Well, the description is
>German, but the TTP program does exactly what you need.

Thanks for this info but I have already cleaned up my newdesk.inf file. I
did download niu086bs and it did confirm that everything was clean. My
system is a TT with 3.06. Searching the web, I did find a site that pointed
me to shbufxxx.prg. This program reads the TT (or Falcon) roms and does a
patch to increase the newdesk.inf size to 16k. It then writes this out as a
file. Can someone tell me how to boot this file and not use the roms.
Also, will this do any good with MultiTOS. I would think the patch would
have to be done on gem.sys. HELP!

3792. FS: 1040 STf w/colour mon. package

Newsgroup: comp.sys.atari.st
Date: 1997-06-13 00:00:00 UTC
From: pss@bigfoot.com
Message-ID: <pss-1306971438060001@cmodem135.lancite.net>
Source record: 120932

I've got the following items, all in perfect working items for sale, as a package only:

Atari 1040STf w/1MB RAM (of course), in original box: this comes with an external power supply connected, as the internal one always got too hot -- this external one works great and the machine stays perfectly cool.

SC1224 Colour monitor, in original box
Alpha Systems DigisoundST sound sampling cartridge, lets you record sounds and map them to a MIDI keyboard for a real cheap 4-voice sampler.
Joystick
Mouse
Manuals
Lots of software and games on about 100 disks, including word processors, boot disks with tons of utils, communications, etc.

Tried the computer, monitor, floppy and mouse a few days ago and everything still works fine. Haven't tried the DigiSound, but it should work fine too, as it's been very well packaged and sealed...

Make an offer! I'll even consider a trade for a decent PC sound card! I'd prefer to ship to a Canadian address, but I can ship to the US too, although it will take longer for me to get the US to ship from there (I don't want to ship across the border, it will be too expensive and complicated).

>(sp:)the T060 was great machine.

Ooops. What have I started ?

I plumpled for a Mark X in the end. -Should arrive soon.

In the end, I just needed a machine with more memory and HD space, and
some better video modes. I think I'd miss the DSP if I went for the Hades.
A TT clone might be nicer for Linux, which I intend to use, but all I seem
to run these days are UDO and LaTeX. I gety an Afterburner, then I'm most of
the way to a Hades040, but supposeI upgrading a Hades to and 060 is even
easier. I might have managed a T40, but then I don't need that much power.
This 8Mhz ST running single TOS is a good deal less painfull than the 486's
at work.

Anyway,
Thanks For The Help,
"Augeas"

My connection's pretty stable now, all things considered - just deathly slow
(but I guess that's the fault of the Net itself...)

m> I never have problems with CAB, except when I run out of memory, but
m> that is entirely understandable.

This shouldn't happen. There's a minimum RAM setting in CAB and if you allow
for the RAM space required when JPGs are expanded before dithering and
display you ought to have your RAM cache flushed to disk before you run out
completely.

Nostrodamus phrophesised this from tparrett@parrett.fast.co.za to All...

Hi Ted!

t> I posted a question here about two weeks ago asking if there is a prg
t> to convert vector fonts to bitmap fonts but didn't get a reply. Does
t> anyone know if the latest version of Fontkit can do this ?
You can convert Speedo fonts to Calamus and Calamus to bitmap with the aid of
Fonty and Fontkiet (both from the FaST Club), AIUI you require SpeedoGDOS for
the Speedo-CFN utility to work tho'.

I don't know of any TTF to bitmap converters.

Have you removed the termination on the hard drive? There should only be a
terminator on the last drive in the chain, which sounds like the Zip from
your description.

Speak to 'ya later!

3808. Organising GEM fonts: how?

Newsgroup: comp.sys.atari.st
Date: 1997-06-13 00:00:00 UTC
From: DCroker@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <1082_DCroker@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 120998

Nostrodamus phrophesised this from hallvart@sn.no to All...

Hi Hallvard!

h> I've got loads of fonts and I'm trying to organize them properly, both
h> for the usual GEM programs, and for the "Papyrus" word-processor.
h> Papyrus organizes fonts by families, but what makes a font family?
There is some confusion over the terms used by traditional typographers and
those used by us, so my answer is only AIUI.

So, a font family would be all the (say) Swiss fonts in all their styles,
italic, bold etc and in all point sizes that have been implemented.

h> Should I give the same looking fonts (in different sizes) the same
h> ID? Should I also give the same ID to those in bold/italic etc. or are
h> they to be looked upon as a different font entirely? What about in
h> "Papyrus"- are they to be put in the same family?
Each font needs its own unique ID

I can't recall the exact sequence of events required to get Papyrus to put
fonts into families as I quickly moved on to vector fonts only, but I do
recall that it was a painless operation. You'll have found that all the (say)
Swiss fonts have their names embedded in the files, eg Swiss Bold, Swiss
Italic, etc which probably helps Papyrus.

Have you seen the GDOS FAQ BTW?

Speak to 'ya later!

Hi Mark, on 12 Jun 97 you wrote: ...respect, brethren
mf>
mf> I'm looking for a .jpg slideshow viewer for the Falcon. What's out
mf> there? Shareware is cool, or not if there's a good commercial
mf> program out there that's not too expensive.

Imagecopy does this pretty well. Even if you have JPGs that require more RAM
to display than you have available IC will skip the file instead of holding
up the show.

Hi,

I'm wanting to update my printer.

I want more than 300dpi, 720 maybe?
Color is also desireable.

For use with:

Falcon/NVDI/Pagestream/Positive Image/APEX.

Any advise is greatly appreciated.

Steve.

3814. need help with newdesk.inf

Newsgroup: comp.sys.atari.st
Date: 1997-06-13 00:00:00 UTC
From: apalmer@zapcom.net
Message-ID: <5nqki4hgi1@ultra.sonic.net>
Source record: 121004

I can remember a thread a few months ago about increasing the size of newdesk.inf. I never had a problem so I did not save the info. I have been adding icons to my MiNT/MultiTOS system and ran into what appears to be a 4096 byte limit on the size of newdesk.inf. My file is bigger than 4096 but AES4.10 doesn't seem to read anything past that point. Is this what is happening? How can I fix this? HELP!

al palmer

ps: I did check the FAQ before I posted this to CSAS.

I ordered Papyrus 5 two weeks ago. Only four days later I got it.
An update from 4 to 5 with shipping costs from the UK to Bemgim was 30
UKPounds. If you want an update you have to send your Papyrus 4 update
disk to hisoft.
The new Papyrus 5 update is delivered on 2 disks. Their are no printer
drivers (it is an update for something) on it but it contains a few new
example documents.

I hope this helps.

Just a question: Does it really converts .tex into plain ASCII, or .dvi?
I know both types of programs exist, but for the Atari, I only have
dvi2tty, but not detex (which is a utility to strip TeX commands from a
TeX source code).

Ciao

> Still, I'd certainly like to know if Ease/Geneva can co-exist.

I once wrote a little Auto-folder/desk accessory combination which
allowed the use of Ease together with Geneva 3. Since then, I haven't
used Ease any more (some may know why ;), but I still have it and could
check if my hack still works with Geneva 5 and the latest Ease (IIRC 5 as
well).

Ciao

Thomas

Can someone, anyone, anywhere in the world, Convert CYBER.SEQ files
to *.3d2 or *.obj

Can you either inform me how..or if it needs a commercial program
then can you convert some for me?

Cheers !ynoT (ATARI Programmer)

Yes, there's a limit to 4096 bytes (before TOS 3). You should cut out
the unused rules/lines. To do this comfortable, get the Newdesk Inf
Utility niu086bs.lzh at sunsite.doc.ic.ac.uk in
/Mirrors/ftp.uni-paderborn.de/atari/tools/util. Well, the description is
German, but the TTP program does exactly what you need.

> The .GIF was loaded from my hard drive for both tests.
> My computer is a Falcon030 16 Mhz 4MB RAM.

It doesn't sound like memory is the problem here!
Assuming these tested configurations are correct, this would need
rebooting to test with and without NVDI, and thus likely to be clean/
clered memory.
If Wensuite loads in 10 seconds, and CAB not at all, when NVDI present
AND
If Wensuite loads in 10 seconds, and CAB in 70, when NVDI _not_ present,
THEN
it looks like Wensuite bypasses NVDI altogether
AND CAB has a conflict with NVDI which may be NVDI's problem or CAB's
problem.

>There's another option, "Replace". I find this one a bit tricky to use
>successfully so I don't often use it. I prefer to edit my mixes using
>list-edit as explained below. BTW - If anybody has good tips for using
>"Replace" successfully I would love to hear them!

The point is this: when you use the write function, events are added
to your file. With the replace function, values are changed, not
added.
Example: Make a volume change from 50 to 85 in the write mode. Later
you decide that 85 is too much and should be 79. You play the song
untill you are after the point where this change took place in
replace mode you can now set the volume to 79. Next time you play the
song, volume will change from 50 to 79.

Replace changes the most recent value of the parameter that you
operate. It doen not affect the position of the event. It doesn't
matter if this is at the beginning of the song or somewhere half way.
Replace is very handy to edit initial settings of a song, or to fine-
tune dramatic changes somewhere in the middle of the song.

Hello fellow Atarians!

Topics:
1 Need to print in Color / Using HP540 with interchangeable
cartridge B&W and color.
2 Can pagestream import Color graphics and Print them?
3 I colored/painted the graphics in color using True Paint/
Image...so I know the graphic is in color.

When I upload the graphic it doesn't accept the graphic saying it is not
a known file (the one after I painted).

I notice that in True Paint and IMage that I cannot print from that mode.

Can Imagecopy print color? etc.
Help...

Why do people always forget about FreeWare?
Some of the best software out there is free!

When you want to do something with graphics that doesn't involve drawing
or loading lots of non-standard graphics formats, there's a good bet
that MGIF can handle it.

MGIFv5 can do slideshows (at least the betas and v5.10 which is coming
RSN(TM)) among lots of other things.
Some features that might be interesting in this case:
- Sequential or random image loading
- 'Single shot' or looped slideshow
- Image selection via wildcards or from a file
- Selectable time delay
- Scaling on load to screen size and/or aspect ratio
- Interpolated scaling for really nice results
- Greyscale, mapped or 24 bit loading
- Display in the current graphics mode, which can be anything from mono
to Falcon TC, including 256 colour modes on graphics cards
- JPEGD is used if available (only in post-5.01 versions)

I've probably forgotten a few features here and if anyone has any other
bright ideas, there's still some time before the v5.10 release... ;-)

You don't say if it's an STF or STE.

If it's an STE, just pop in 4 30pin, 1Mb SIMMs and you've got 4Megs.

If it's an STF or a plain ST, you'll need a special memory (usually max
4Mb, SIMM sockets) board. There are quite a few of these available. Try
Systems Solutions or Titan Designs in the UK. The new Magnum ST allows you to
have 14Mb on a plain ST, but unless you really need it, 4Mb is plenty for most
applications.

I can't remember my of one lost bit!
I take macintosh and dos disks.
My drive is used by a mac and some ataris via scsi.

It's enough to partition ANY disk to have the right access by mac/atari.
(But atari AND mac are ready to read a dos disk format)

It's not only Depeche Mode who uses Atari.
To just name a few, Klaus Schulze, Tangerine Dream, George Dipching,
The Real McCoy, King Rollo they all uses Atari's. I don't know if
Fleedwood Mac still uses Atari. In the past they surely have make use of
Atari.
From time to time one can see on MTV-Europe a clip showing a SM124 monitor
displaying the arrangement window of Cubase.
Furthermore the members of the group named 'Teenage Atari Heroes'
wearing T-shirts with the Atari-symbole on it.

>Is this where i send the faulty disk and the threatening letters. 8~))

Did anyone receive my follow-up to this posting some days ago?

I haven't seen it appear in csas, so I'm wondering if it got through.

In case it didn't, I'll repeat that any duff disks should be returned to AC
at 65 Mill Road, Colchester, Essex, CO4 5LJ, UK.

Make sure you include your full name and address, and we'll be happy to
replace the disk - no hassle :-)

It is only a small proportion of disks that are affected and we know
exactly what the cause was - basically a badly written commercial copying
program!

Steps have been taken to prevent this happening again I can assaure you :-)

Best regards
Mike Kerslake

3841. Atari stuff for sale

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: Sherri Cross <scross@tir.com>
Message-ID: <01bc7906$c0db6660$8f7865ce@default>
Source record: 120881

I am clearing out my attic and garage of all my Atari stuff. Anyone interested let me know. I have tons of stuff to sort out and it will take me a couple more weeks to get a list.

Here is a partial list of items ready for sale. If you drop me your Email address I will send you updates until it's all gone.

First, it will take me a while for a software list. I estimate I have over 5000 disks. Over the past several years I've bought people's systems and they came with lots of disks that I hardly even looked at. The software I have falls into one of these catagories:
NOTE that all prices are negotiable, make me an offer.

Blank disks or disks that have junk on them. Will sell in boxes of 100 for $10.

Various p/d. Too many to sort through, will sell in "grab bags" of 100 disks for $15.

GAG (Genesee Atari Group) disks. This is p/d software that our group put together. Those who are long time die hard Atarians probably heard of our group and our disks, as we sold a lot around the country. These are my old masters and copies made for sale. Again, will sell in groups of 100 and will TRY to group them into sets of graphics, games, utilities, etc on request, but I can't give you a list. $20 for 100

Backups/pirated of commercial programs. No guarantee if they even work. No manuals or docs, may need manual for copy protection. 50 disks for $25.

I will be coming up with a list of original commercial disks. Many do not have docs. Not sure how I will price them, but they will be cheap. The more you buy the cheaper it will be.

OK, now the hardware. Again, this is only about 1/2 of what I have available.
MAKE ME A REASONABLE OFFER!!!

Hardware items I can tell you about now include:

7 color sc1224 monitors, all work fine.
1 color monitor (the newer one can't remember the number, 14-something).
1 dead and 1 working sc124 mono monitor
If you are interested, I have a custom made cloth padded carry case for the sc1224 or sc124 monitor.
Has some Atari patches sewn on. Used it to carry my system to club meetings and AtariFests.
1 STE w/4 meg and ADSpeed accelator

1 Hard drive, my first attempt at putting one together. Half tower case,
2-240 meg Maxtor drives (I think,
(I think, they were big reliable drives when I got them), and ICD Host.
Yup, the Half tower case was
an overkill but it only cost me $5 at a computer swap. Who cares if
it's only 1/4 filled?
1 mega-4 original. Something loose in the video, needs to be dropped
occasionally.
1 dual 3 1/2" disk drive (two drives in one case great for ST's with no
internal drive
1 3 1/2" drive modified to work with either a PC or ST by flipping a switch
1 3 1/2" Atari 314 drive (Single sided?) Power supply may be bad, still
checking things out with this.
1 Indus GT 3 1/2" drive, works great. Very reliable drive.
1 120meg hard drive. Supra shoebox case, ICD host, Quantom 120meg drive.
1 Syquest 44meg removable hard drive (Atari Megafile 44) w/3 cartridges
1 ICD tape backup w/120meg hard drive. This worked a while ago but for
some reason it's not
getting power now. Posslbie bad power supply. Comes with 4 tapes.
Should be easily reparible.
1 Supra host adapter. Don't know where it came from, just a card that was
probably hacked from a drive.
Spectre Mac emulator cartridge
Discovery disk backup cartridge
2 hand scanners (mygraph I think). I have software for it, like Touch-up,
Scan-it, Merge-it, etc..
DVT Cartridge. Goofy idea where you connect it to your cartridge port
then to a VCR. You do tape
backups to a VCR. Works, but it's slow and not extremely reliable.
(poor mans tape backup)
Monitor master
Video master

DC-Port cartridge. What? Never heard of it? Plugs into the cartridge
port and lets you run 3 additional serial portts. Add Michtrons BBS
program and you have a very nice multi-line bulletin board system. Sad
part is that nobody came up with software to support this cartridge. Only
one I could find was a terminal program (can't recall the name but I can
add it to the deal if I can find the disk). The program let you connect to
4 bbs's at the same time. You had a window open for each one. Sure it was
confusing as hell, but the IBM couldn't do that back then, and I loved to
show them my system!

Nitelite Interface. Yet another multi-line hardware device. This one
plugged into the serial port and controlled 4 modems. Sadly the developer
never supported it, no software companies wanted to touch it, and the BBS
software that came with it sucked big time. But it did have some use for
those who knew how to program and had patience to deal with the limits.

Atari trackball rewired to work as a mouse.

Several Blitz cables. Lets you do super fast disk copies through the parellel port, even handles some copywrite protection software. Software included, but I don't remember if this is the older version or new. Should still be available for download in some places.

I also have several joystick extension cords, and some Y-joystick cords.

I still haven't unpacked them yet, but I believe I have a couple of ST's, some work and other's are dead. Interested in parts?

Haven't unpacked my 8-bit stuff yet. Most of it is promised to a gent over in England, but if you are looking for anything let me know. I do have a Commodor composite color monitor for sale. This was a hot item in my 8-bit days and was hard to find. Still in good shape too! Also have a couple of MIO's and 810 interfaces.

3842. atari st emulator

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: Mike <lpg@dsv.nl>
Message-ID: <01bc790b$dc28e500$e98d4fc1@Pmbarney>

Does someone know, if there is a Atari ST emulator available for the PC(
e.g. for Dos , or for Win 95), so I can play my Atari games on the PC.

Thanks,

Mike.

Hi Gus.

I was looking at Floppyshop's PD catalogue (based here in the UK) and
one of their disks, F.5651 contains the following program

"CHOPPER GLASSES DRIVER V1.0 by Glen Sescila - A DIY project which
allows you to use 3D Sega Chopper Glasses on your ST. It involves the
building of a PCB (diagram on disk) and the use of the supplied
software driver. The hardware is identical to the PC version of this
project and interfaces via the serial port. This will work with all
software written for the StereoTek glasses and has been tested on CAD
3D2 and MOLECULE from the CyberStudio series."

If you can't get the original glasses, it may be possible to alter a
pair of Sega ones which are probably easier to find. If you are
interested, Floppyshop have a web page at
<http://www.netkonect.net/tachyon/flopshop/index.html>
(they are based in the UK>

You can either use the EXPORT driver to save a graphic as a TIF or you
need the Bridge module to do it for you.

Get Analogic's TOS switcher (available from Best Electronics) so that you can use both TOS 1.62 and TOS 2.06. Its only about $49 and is very easy to put in to your STe... That way you won't lose any software (you won't lose much from 1.62 to 2.06 but some games won't run-Chaos Engine for example) and you will still get all the benefits of the newer TOS. You'll love TOS 2.06/1.62 on your STe--I love it in mine! (in fact, I liked it so much I wrote an article about the switcher/TOS 2.06 in Current Notes a few years ago!) <grin>

Ok, first of all, bear with me a moment... I also own Amiga's as well as my beloved Atari's and I get info from the Amiga world too... (hold back them ropes and daggers!) <smile> Anyways, I just read in Amazing Computing that most of the popular Amiga models will have PowerPC accelerators available starting this month... So here is my question: is there any (reliable) news of new PowerPC or 68060 based accelerators available for our Falcons and other Atari models? I'd really like to see a competitively priced PowerPC option for my Falcon... Thanks in advance for any info! :)

I recently installed an FX card and 8 MB of RAM in my Falcon. (The rest of the hard part I am getting computer direct to do next week). After I add the card I started to have prolems with my telecommunivcations software. I would have troubling logging on to my ISP, trouble logging on to the local atari BBS. I would get a connect - sometimes and others gibberish. Furthermore all of my downloads would be corrupted. I tried turning off different auto folder software, HSmodem, NVDI Magic nothing made it better untill I disconnected the FX drivers and went back to straight ST ram. Problem solved.

Does anyone have any idea what is going on? I would really rather use the RAM on the fX card. It makes magic and MINT run Soooooooo much better. Is there an updated driver for the FX? Is it necessary to change some program flags? What?

Any suggestions would be appreciated.

Setup - Atari Falcon 030

I (and Mike) still have one. You can't get a new screeneye.
It's more as one year out of stock. (www.overscan.com)
I don't have an expose', ask mike ;)

You found the technical data of the screeneye in doitf030.
Most pictures in doitf030 are done by a screeneye.
(Converted down to 256 colors)

Hello, Richard.

I am afraid you'll be stuck with a Mac Classic style Mac.
The 030 is not explicitly supported by Spectre 3.0. The manual
talks about upgrades, but I think Dave Small ended business soon
after releasing 3.0.

I *had* it running here...I'm trying to get it to work again here.
Regards.

PacifiST, an excellent (freeware!) ST emulator, currently in version 0.44.

It's a DOS program, and runs flawlessly on my OS/2 machine. I don't
know, but I guess it will run on Win95 machines as well.

Sorry, i do not have a direct URL address for you. But if you use
one of the search-engines for Pacifist, I'm sure you'll find it.

Well, first we'll have to be sure if it is a Pacifist problem or a
problem specific for this game.

I suggest you switch on the TRAP tracing feature of Pacifist (see the
docs), and then see if it records something when your screen has gone
haywire.

3859. WTB: Hand Scanner for ST

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: ws96ag@badger.ac.brocku.ca
Message-ID: <5nunm1$ipg@butler.ac.BrockU.CA>
Source record: 120899

I am looking for an old fashion Hand scanner (low res, no colour, nothing fancy) that would work on an ATARI STE. I am willing to pay about CDN $30 + shipping (if this is appropriate, I hope). I need it to be plug-and-play (with software) or instructions on where I could get ANY software (PD or shareware) that will work. I do have MIGRAPH and Calamus (it came with the computer I bought used). Migraph and Calamus seem to have some ability to communicate with hand scanners.
Also, could anyone tell me what kind of scanners will work on the ST? Do they have to be specially designed? Do they plug into the cartridge port, are parallel and/or serial port one's available? Can I buy one at a normal electronic/computer store?

Thanks,

Source record: 120900

I was hoping I could get some help regarding Gemul8r Classic v3.6.
I have the program up-and-running using a TOS 2.06 ROM disk version. I have tried it on several computers (486 40Mhz & on several pentiums). I have some questions.

Q: I can use the virtual drives (C thru F) but would prefer to be able to run hard drives like in PaCifiST (where by the ATARI drive C: is simply a folder anywhere on the PC hard drive). This way I could interact with the PC directly. (ie. make a homepage in HP Penguin, then access it directly from Windows 95, without having to copy to a floppy disk.) The gemul8r FAQ hints that this method of hard drive access *does* exist, but does not explain how to use it.

Q: In gemul8r classic some of the keys on the keyboard are not mapped properly. For example Shift+2, which should give the @ symbol gives the " symbol. I also have a problem with one of the slashes (forward or backward, can't remember). Does anyone have a list of the keyboard mapping?

Thanks in advance.

J > He was using the thing when all of a sudden the monitor went
J > black,

Well, you can crash the ST and get this effect. Try a hard reset.
But, chances are, this monitor (like so many SM124's) has gone flat
because a couple of small components died. Look for a text file
named deadmon which will tell you what happened and how to fix it
for cheap. The fix isn't difficult. If you can't find it, I have it
around here somewhere and will send it to you if necessary.

>Thank you, JW.
>joewilson@tenforward.com

Well, you could always boot load TOS4.92. However, it has more bugs than an acre of Iowa farm fields. Many have tried and passed. Why? It has many auto folder conflicts with prgs like LED and SilkMouse. No wonder Atari never released it. It does update AES to 4.10.

The best thing you can do is buy NVDI v4.11. You get most of the benefits and a LOT more. IMHO, it's the best prg you can buy for the Falcon!

When I'm bored, I load TOS4.92 so I can see color Stop/Caution signs in the dialog boxes. That's about it.

Hi

There is a package called ICDRAW which includes plenty of Falcon
colour icons plus the ability to convert PC windows(spit) icons into a
format for the falcon. It is on the cd rom All things Falcon
/utilitiies/system/icdraw.

bye for now
Pete.

3867. For Sale

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: All@Sea
Message-ID: <1474_All@Sea>
Source record: 120950

Can anyone tell me if this is getting out and about please?

The following items are for sale. If you would like to make an offer, please do. I can be contacted by e-mail at algy@allatsea.demon.co.uk or by Netmail. Also by BBS/Fax on 01203 601448 24hrs a day.

1) Epson Stylus Color 200 Printer.
Includes Mono and Colour Ink cartridges and boxed with manual. Only a few months old but I have bought a newer model so no longer require this one.

£100 o.n.o

2) Atari Falcon. In a Tower case with external keyboard and includes the following: (PLEASE NOTE: I will not be splitting this package unless someone wishes to buy it without any of the following, so please don't ask for individual items because the answer will be no.)

14Mb RAM
PowerUp 2 accelerator (to 32Mhz)
ScreenBlaster (screen resolution expander)
Double Speed SCSI CD ROM
65 Mb original Internal IDE drive
170Mb SCSI Drive
1.44Mb Floppy drive
68882 FPU
14" SVGA Colour Monitor

Also included in this package:

Hardware:
USRobotics 14,400 Sportster Modem
Tabby

Software:
Extendos Pro
Magic 5
NVDI 4
Ease 3
DA's Picture
TruePaint
Studio Photo
Apex Media
Fonty
Calamus S (German version)

I am looking for £1000 or the very nearest offer to it, offers are invited provided they are not ridiculously low, higher offers are very welcome of

course ;-)

I have most of the manuals and original documentation for the above,
including the Falcon itself.

Message-ID: <EBr8DE.Mr8@cix.compulink.co.uk>
Source record: 120951

In message <5ne9ek$ha5@preeda.internex.net.au>, julian@connexus.apana.org.au said:

>What jumpers do I need on what pins to upgrade a TT memory from 4 up to 16
>meg?

If it is an Atari 4/16 TTRAM board, for 16MB you set jumpers on:

W101 1&2
W102 1&2
W106 1&2

If the SIMMs are non-burst mode put a jumper on W105 1&2.

If it is an Atari board with no W104 or W105 or W106 it is only
designed for use with 1MB SIMMs.

How can I extract a .TGZ file so that I get the seperate files .
Is it possible to do this kind of extraction under single TOS? When I
use gzip.ttp I get a TAR file, which seems to be all the
extracted files glued together as one. How do I seperate them?

>AES4.10 doesn't seem to read anything past that point. Is this what is
>happening? How can I fix this? HELP!

I ran into this problem, too, during the days before NeoDesk and Ease,
which have no equivalent size limits. What I found in the newdesk.inf,
after a couple of years of adding and deleting things on the desktop,
was a great deal of redundancy in the file. By that I mean duplicate
lines and lines left over from previous icon deletions, installed
applications, etc. If you're very careful, you can get rid of these
things with a text editor. The safest way, though, would be to re-create
your desktop right from scratch. There's a good chance you'll knock off
a couple of hundred bytes without losing a thing from the previous one.
If that doesn't work, you'll need to find a patch to increase the shell
buffer or move to an alternate desktop.

3871. FS: Atari stuff

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.061497.135032.96@wxs4-3.worldaccess.nl>
Source record: 120954

This is the June 1st version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
Deep Space (2 disks, Psygnosis)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
Jambala, the Seven Gates of (Thalion, DS disk version)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect
printer to
get it to work, does not work on Falcon, alas)
Monster Business (platform game, Eclipse design)
+Obliterator (2 disks, Psygnosis)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by
Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the
ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE

FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten label by ES of TEX, ST only): 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1

Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

FOURTH CATEGORY: MISCELLANEOUS

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Ninja Gaiden
Rampage

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

3873. HELP! Junior Office

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: allmidd@xs4all.nl
Message-ID: <5nu1eblpo1@news2.xs4all.nl>
Source record: 120956

I tried to install Junior Office (reg) but it won't work.
The problem is it simply will not dial.
I know the modem has class 2 and is able to send at 14k4, because
STARFAX works fine.
I have:
* Magic 4.02 (and consequently set JOffice to multitasking)
* a upgraded modem 1 port (RSVE) to get higher speeds (works fine)
* HSMODEM07 installed

any idea's?

: All right, this is a loaded question(I am new to the Atari computer), but
: here goes:
:
: Can only Atari hard drives be connected to the hard drive port? Are
: there any adaptors to let you hook other types of drives to it.

You can hook SCSI drives up no sweat...
You'll need a SCSI host, such as the "ICD Link", or the AHDI cards
also made by ICD Inc. I suggest the latest Link module you can find,
as it's a simple little plug about the size of a cigarette pack that
plugs into the Hard Disk port on the ST, then you plug your faviorite
external SCSI devices into the Link. They cost around $100.00 new.
One place that usually has some in stock is Toad Computers, who's
email is info@toad.net.

: Did atari produce a high-density floppy drive for the ST(f,e)? Can a
: HD floppy drive be connected and used? Software needed if so?

Not exactly...
But, third party outfits put together a kit called Ajax that allows
you to do this. Once again, check with Toad and other dealers for
avilability.

: I've seen mail about hooking a ZIP drive to a falcon, is it possible
: for an ST?

Yes, but with one minor catch...
It must be a SCSI version of the Zip drive...not parallel..not IDE.
If you have a Link SCSI host, and the Zip drive is the only drive
connected, then you'll need to build some kind of cable to leech power
for the Link adaptor, as it uses SCSI termination power that the Zip drive
does not provide. It's not very difficult to do...you simply determine
what pin on the Link needs power, and run a 5V line from your ST power
supply, or from the 5V pin in the joystick port of the ST.

If you have other SCSI devices connected that DO Provide SCSI termination
power, then you won't need the line, just plug in the Zip and go. I.E.
if you have another hard disk, or a CD ROM, etc...

Also, consider the EZ 135 drives over the ZIP. They are cheaper, bigger,
faster, and have a better warrenty on both carts and the drive itself.
They also provide termination power :) Carts are about the same price
as ZIP carts.

I remember an older sound card that had a digital joystick connector
(which would probably work for your trackball). Maybe someone else here
can identify one like that. If you can find one, it shouldn't be more
than a few dollars. If I can track down the name of the soundcard I will
send it to you.

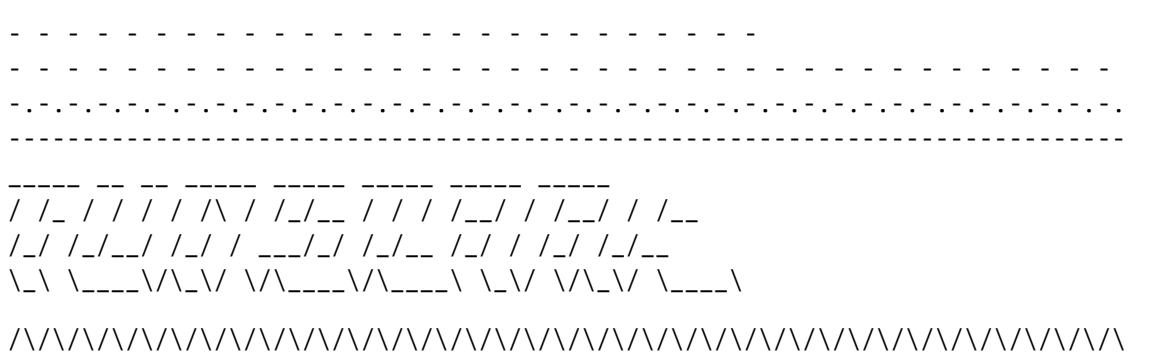
3880. Fun magazine

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: Hans Wessels <mr_ni@mbh.org>
Message-ID: <866276712@p24.f101.n323.z205.mbh.org>
Source record: 120963

Hi!

DBA magazine is now called FUN magazine. It's available at:
www.xs4all.nl/~bonus
Althoug it's a Falcon magazine ST users can read it by depacking the ICE packed
text files.

The contents are:
----------------------->8---



FunScape 1.5

Yep its ready, don't ask us how long it took (WAY to long) but we think
it was worth it. So what is FunScape ??? FunScape is the new version of
the official dead DBA magazine. We though it was a shame to let this
"shell" rot on an old forgotten harddisk so we made some new graphix for
it. Some new articles, some good tunes, great fills and a new look fitting
by the Internet Age. And so here it is !!!!!

What can you expect ????

*) Report of the Siliconvention'97 with reviews of the 96ktros, screen
shots of the demo's, party report and a realtime article (made by TNB)

*) The results of the Symposium'97 and the never released realtime article
of the Symposium'96 party.

*) The truth about Richard Karstmakers(!) and his talk about the Macumba
virus and what the MAKER of this virus thinks about that. (very good
read stuff and very intresting !!!!!!)

*) Loads of URL's for good Atari sites, Scene groups and places for Atari
software.

*) Some nice goodies, great playable version of Crapman, the better then
then original Pacman, clone. A Snake game esp. for Falcon and a
listing for an GFA demo that competed at the Symposium'96.

Even the macumba virus/antivirus sources (try and find them !!!!!)

*) Great music (.DTM) while you're reading: Funkmix by Effect.
Sad Song by FUN
and Dream X by TSCC
and extra...
(Competition mod!)

*) and loads of stuff for you to read.....

So get installing and reading....

Have FUN, we have

The FUN Magazine team..

P.S. never expect anything to be dead unless you can proof it !-)

----------8<----------

Bye, Hans Wessels

3885. FS: CLABS MKI Atari Falcon + Extras

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: David Butler <dhbutler@tiac.net>
Message-ID: <5nufdu$bnd@news-central.tiac.net>
Source record: 120968

For Sale As Bundle (In the United States only):

C-Labs Atari Falcon MKI with:
14mb ram (installed)
Alpha-Data mouse (original Atari Mouse not included in package)
BlowUp =B3Hard I=B2 (screen resolution enhancer)
SVGA Monitor adapter
RGB Monitor adapter
Apex Media (Animation/Morphing program for Falcon only)
Original Manuals and software included
Power UP (32mhz accelerator with no cache, gives you a %15 speed boost)

What it doesn=B9t have:
A Hard Drive
A very good floppy drive (recently discovered the drive is a little
flakey, and may need replaced)

This unit is in extremely good condition (it was hardly used due to
Fatherhood ;-), and is less than two years old.

Considering the flakey floppy, I am only asking $350 (firm), which I think
is one heck of a deal (Apex Media alone is about $150 new). Only other info
you should know in advance is that there is a little glob of clear superglu=
e
that I put on the two =B3home keys=B2 because Atari, in their wisdom, decided
not to do this. If you are a touch-typest this will be useful - it does not
mar the keys, but you can see it. First $350 gets the unit. I will pay
shipping and send it COD.

Please send responses to dhbutler@tiac.net.

Note, I sometimes do not check my mail for up to a week. Please do not take
this as a lack of interest on my part.

-David Butler
=3D=3D=3D

3886. FS: Migraph Hand Scanner (nice)

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: David Butler <dhbutler@tiac.net>
Message-ID: <5nufff$bnd@news-central.tiac.net>
Source record: 120969

For Sale (in the United States only):

Migraph Handscanner with Touchup.

Original 400dpi b&w Migraph handscanner with Touchup and full documentation
(sorry, no original box).

Plugs into your ST/STe/TT (or Mega ST/STe) cartridge port (does not work
with Falcon systems)

This is an extremely good scanner, it produces absolutely beautiful results
- it is now about 7 years old, but works like brand new.

Asking $100 (firm). Will pay shipping and send it COD to first taker. You
realistically need at least 2megs of ram to make much use of this device.

Please send replies to dhbutler@tiac.net.

Note, I sometimes do not check my mail for up to a week. Please do not take
this as a lack of interest on my part.

3890. Distributors Wanted NOW!!

Newsgroup: comp.sys.atari.st
Date: 1997-06-14 00:00:00 UTC
From: Tony Scott <summer@laoffices.com>
Message-ID: <5nubtl$84p$7525@cadmium.aware.nl>
Source record: 120973

Hi,

This is a Solicitation Email, we are looking for new TUFF'97 DISTRIBUTORS.
TUFF'97 is a promotional concept for a prospect follow-up system called
"Simple Track". Software designed for Windows 95, 3.11 and NT
machines. (Macintosh users read the NOTE below(*))

Concept:

The TUFF'97 software includes a copy of Simple Track, so you can use this
for your own personal administration (free). However, the TUFF'97 software
is designed to give you BIG TIME credits for just taking the efforts to
PROMOTE it.

How do I get those credits?. Easy, just distribute/promote it. How?
(Give away the software for free, put it on your website/homepage
and let everyone download it. Give it to your friends, attach it by
email etc). With a one time $40.00 (USD) validation code purchase,
YOUR name becomes part of all sofware you sent out to your customers.
When your TUFF'97 software gets validated, all your personal information is
automatically integrated in the software, so everyone knows how to reach
you by phone/fax or email and where to sent the check/money or cash orders.

Basically this is the concept. Offcourse you need the software to grasp
the whole thing. Believe it, there is absolutely no marketing knowledge
required, just ask for the software package, join and start promoting your
own TUFF'97 line. The only thing you DO need is a PC or Mac(*) and Internet.

(*) TUFF'97 is only available for MacOS users running Connectix VirtualPC
or Insignia's Sofwindows 95/3.11. A true MacOS version is not available.

When you're interested in becoming a TUFF'97 distributor and create your own
distribution line, sent a mailto:FiReStArTeR@frodo.com and ask for your
copy of the TUFF software (We'll sent you a download location and install
instructions). This is a serious opportunity, so only serious responses
are processed. If you're not interested, have a nice day.
Best Regards,
Tony Scott

Thanks for this info but I have cleaned everything out of my newdesk.inf
file. I would like to at least double the size of newdesk.inf. I found
shbufxxx.prg that patches my 3.06 tos to allow a 16Kbyte newdesk.inf, but
because I use MultiTOS (AES4.1), patching 3.06 does no good from MultiTOS.
I have 190 very nice color icons and I would like to use them from MultiTOS.
If I can't find a way to patch MultiTOS, I will have to move on to something
like Thing. I'm hoping not to have to do this.

To untar the files you need tar.ttp. This can be found on every ftp
iste who's supporting the Atari platform.
I don't know much about it but the command that works for me quite
well is.
It works onder singletos.

-x {name_of_the_file.tar}
I suppose the file that must be untar'ed is on the same dir as the
tar.tpp

Hopes this help

Image Copy is a really good graphics utility for TOS computers...
It is commercial, but it deals with almost every bit map format there is,
including an option to get the Kodak CD photo version of the program,
which is slightly more expensive due to royalties to Kodak.
It displays and prints graphics with some control over how the picture
is displayed, such as contrast, brighness, and other general tweaks.
Image Copy also can build, display, and print thumbnail catalogues of
your images. It converts between formats...and even on mono ST keeps
up with origonal colors in conversions unless you want it to actually
dither and reduce number of colors in the converted version. Slide
shows are also possible, and you can choose to do them in windows, or
full screen. Much more is possible with this program, but this is
the general over view. It's pretty fast too!

Brian

It's unfortunate, but there is a considerable time lag between us receiving the magazines from the printers and susbcribers outside the UK receiving their copies.

Basically we have to deliver in bulk to our local distributors, and this process can take from about 5 days within Europe to two and half weeks in Candada/USA/NZ etc. Then the local distributors have to unpack the big boxes of mags, then repack along with Reader Disks etc into individual envelopes and then send through the local mail network.

I can well imagine that this whole process can take about four or even five weeks to accomplish. It's not a good thing, but in order to keep costs down for everyone, it's the only really practical way of doing it.

If it's any consolation I personally despatch all supplies destined for local distributors and non-UK subscribers within a day or so of me receiving the magazines from the printers. After that we're in the hands of the courier company and local mail networks to a large degree.

Best regards
Mike Kerslake

I recently got a quantum 240 scsi HD for my Stacy2. The drive had been
low loevel formatted on IBM. What is the next step in getting it
working w/ the Stacy. It has already been correctly installed inside.
I remember the Atari guy saying "low level format -(and then something I
don't remember-some software treatment??) step 3 was to use Hdx.
Anybody know? Does anyone have a current version of Hdx?
I need one.
please email.
Thanks.

You need the Calamus Bridge module, which will allow you to export whole
pages or individual frames as Postscript files, bitmap images (including
tiff), vector images, etc., etc. Available from MGI.

Message-ID: <95354484_000014_OASIS_NEWS@stanley.wintermute.co.uk>
Source record: 120835

Hi Atarians!

This might be my last appeal for help before giving up the Net.
I'm using a TT030, TOS 3.05, NVDI, Moda07, MagiC5; Oasis2.10E; STik 1.12,
CAB 1.5, CAB_OVL (030) 1.5. Problems exist in every combination.

1) Re POP3 mail & Oasis2.01: can anyone solve the problem that Oasis will
not unbatch emails received via POP3? It either ingnores the file
"Incoming.IN" or just deletes it. Oasis2 worked perfectly with SMTP,
but my ISP (Wintermute, now IFB, in Aberdeen) is changing its customers
over to POP3.
I can only read the mail by rescuing it via Harlekin before quitting, but
cannot do a Reply-To.

2) Re PPP connection: SLIP works perfectly on the present telephone
number, but on the new number it won't (even with the suggested
addition to our logon-name of "%slip").

3) The ISP is moving us over to PPP on a new tel number.
The ISP techies cannot or will not tell us (all TWO! of us Atari users
in Aberdeen) what are the requirements for the Logon sequence
(this applies to both STiK and Oasis2). We can get as far as seeing
the received "Password:", but nothing else happens, no matter what
we put into our logon files.

4) We are both tempted to move to another (very northern) ISP which
does aupport Atarians, but only with previous versions of the progs.

In hope,
Charles.

I bought this game from some guy at an auction and I'm having a hard time getting it to work.

The game loads up fine right up to where it says "You now have manual control". When I fire my lasers with the mouse or Return key, they keep on firing and I can't control the ship at all. Has anyone ever come across this sort of problem.

I have a 1040STe (TOS 1.62) with 4 megs of RAM, if this could help explain things...

FWIW,

All North American copies are routed through our office. Computer Direct is
the Wholesaler/Importer of Atari Computing for North America.

The dealer copies and individual subscriptions all leave our post office at
the same time. For example, AC#5 has just arrived on Friday and we wil be
packing the orders on Monday and mailing them on Tuesday.

Some dealers have us hold the shipment for a period of time for various
reasons. This likely explains the delay for subscribers through Rich's
service. There was a delay in shipping his AC#4 order out this time. Best
to contact him directly if you are concerned that your mag has gone
missing.

Letter mail to the USA should not take a month, parcels with larger values
can be held in US customs for clearing and this can slow things down a tad.
Letter mail takes 4-6 business days to get to California.

Most of our direct subscribers in the USA have confirmed delivery of AC#4
two weeks ago.

All the best,
Chris @ Computer Direct

I'm contemplating purchasing some new ROMs and would like some info/feedback.

I'm currently on a 1040 STe, with 4mb & TOS 1.62. - Does TOS 2.06 require any additional/different hardware (in the sense of support chips) or would I be able to use it with this setup?

Any comments on whether I should buy it to use temporarily, or just save the money for my eventual purchase of a Hades?

I visited an ftp site that had various versions of TOS available for download for people using ST emulators on the PC:

- Are these straight dumps of the roms, and usable by me?
- Are there any copyright infringement concerns if I were to d/l TOS 2.06, just to test it and see if I wanted to purchase the ROMs?
- How would I load the TOS.IMG file into my computer? My original ST was a 520 with TOS 1.0 which was on a boot disk, but I never really paid much attention to how it was loaded at that time. (I know I've seen loaders on GEnie, but if I remember the 'browse' they allowed you to load older versions of TOS into newer machines, I'm not sure that the opposite is true).

Thanks in advance for any info you can provide.

To answer your last question first, Atari didn't want them to, so they had to rename themselves ATR - for a while, at least. I saw Atari Teenage Riot in Glasgow a few years ago (supporting Sheep On Drugs) and bumped into them outside afterwards. I couldn't resist asking whether they used Atari machines, and their English sort of DJ guy (who was doing most of the talking) answered, "In the studio, yeah." (Sure enough, the liner notes on the album "1995" listed an Atari 1040ST as part of their kit.) Anyway, I was offered a lift in their van, but sadly they were heading in the wrong direction.

As far as I can remeber SUPRA dirves had internal SCSI adaptors. The
drive inside is scsi which is fully usable with your falcon. You have
to bypass the scsiadapter inside the case. i guess you can remove the
adaptor all together. You shold be able to find a lead that connects
the 25 pin port on the supra with the SCSI2 port on your falcon.

I'm using a Toshiba 1.08 gig 2.5" IDE HD in my Falcon and it works great. Any standard 2.5" "notebook-size" HD should work except ..... I tried an IBM, but had problems. After looking in to the IDE compatability issue, I got replies from ICD and CompDirect saying that IBM and Western Digital drives were not too friendly with the Falcon. Suggested brands are: Fujitsu, Conner, Seagate, Toshiba, Maxtor, and Quantum. I don't know how big you can go, but my 1 gig seems fine. It is a simple task to swap drives. To make things easier, if you don't already have an external (SCSI) HD, borrow one to temporarily store your goodies on. It helps to put HD boot program on a floppy to boot from. Your Falcon should have come with Atari HD software. This is really all you need, but you don't get many extra-neato (and useful) HD utilities with it. I'm using ICD PRO, which I am happy with. Others have recommended HD-DRIVER. Also, for HD diagnosis/repair try looking at a shareware program called ZORG. A similar and highly recommeded program is Diamond Edge from Oregon Research. I hope this helps.

Yea, i've been following the Amiga thing. A lot of people are unhappy
about the upgrade offer that the company gives to users with existing
060 cards. There is also quite a debate over the O/S and if any developers
will port existing software over to it. Looks like the general opinion
in that N/G is stick with the 060 cards, especially now as they are
much cheaper than a year ago.
Any chance of toying with an 060 in the latest shippment of A/B cards
will require desoldering the 040 from the card:(. I guess it wouldn't
be that big of a deal, but after forking out the cash for one of those
I don't think I will be trying that out anytime soon. From my experiences
and what I have been following, you won't be able to get an A/B much over
40Mhz, and I don't think it is processor related. So you would be running
your 060 at 40Mhz. The cost of the A/B-Nemesis over the Hades is marginal,
then considering you would be loosing out to it at about 30% processor
speed, might as well fork out the bucks for the big bang machine. The A/B
will knock your socks off it your use to a 32Mhz Falcon however:).

>
>I did not observe such a problem.

Oops, my fault. Apparantly the new overlay was working but I forget
that CAB was reading the pages from the cache at the time I was
testing the overlay.
Now with an empty cache my problem is even worser. The overlay doesn't
work at all. Whatever URL I try I get a 'file not found' (of something
like that) message. The led's of the modem remains silence
Looking at U:/proc I noticed there were two cab.xxx active (978.760
and 848.624 bytes). Multistrip displays this as cab and cab+mintnet.
The same happens with cab v1.5 too.
With the latest version 1.81 I still have this problem.
I was thinking this was maybe a problem of N.AES but with or without
N.AES the song remains the same.
Any idea why?

>: For the moment I can't say that. Maybe my mint.cnf and/or stik.cfg is
>: wrong. Are there special things I must keep in mind?
>
>STiK has nothing to do with this, since you are using MiNTNet.

Yes ofcourse. Can I use gluestik (needed for my other net applications)
besides the mint overlay? I don't see why not but you never know.

Brian, Time Bandit *does* work with PaCifiST, but you have to use one of the pirated disks available on the Web - the original disk's protection stops it from working with the emulator.

I have a printer-driver that creates IMG-Files from the Calamus 1.09N
Pages.
You can change IMG's in a graphic software into TIFF or other Formats.

If you need it, I can send it to you uuencoded via e-mail.

Those jumpers are used to specify, for each of the two SIMM
banks, whether they contain 1 MB or 4 MB SIMMs.

In your case, the two jumpers should be set identically. Off
the top of my head, I can't remember which setting specifies 4
MB SIMMs, but it won't hurt if you get the wrong one. (At least
it didn't hurt my board when I was in a similar situation.)

This is true, I know this man (Paskud) personally, but he is a very, very busy one, so even if you are in Poland and order this device from him, don't expect the order to be realized very fast.

There is yet another solution to the IDE link in Poland, made by Karen in Warsaw (ul. Przemyska 11A). This one sits internally inside the ST case and it is possible to hook an external IDE CDRom to it. I have it in my computer and it works fine.

Hello.

I just got an Atari Portofolio and there are several things I would like to know. Maybe someone out there can help.

I have an Apple Macintosh also and I would like to transfer all the stored data from the Portofolio to the Mac. Is there someone who can tell me how it can work, i.e., what kind of cables and stuff I should get/make. Also, what software can help me in this data transfer issue or where I can get some other information about Portfolio? I know, Protfolio is a little older, and therefore some WWW sites I checked are older too, but is there an updated site where I can get some software too? Any software recommendations? Come on Portofolio fans, give me a hand.

Robert.

To successfully extract a *.TGZ file, you need to run two pieces of
software:
GZIP.TTP -d filename.tgz

GTAR.TTP -xvf filename.tar

The first program you have, it seems, but you'll need to get a copy of the
second... I am currently working on a shell for GZIP and GTAR. I hope to
have it out within a month (after I really get a chance to debug it).
But, for now, you'll have to do the extraction manually. Hope this helps.

Thanks for the info. The latest shbuf works for 3.xx and 4.xx TOS. The
only problem is I use MultiTOS with AES4.1 and shbuf doesn't patch it. I
must say that shbuf is a very nice program.

Try removing the string "ATD" from the Modem set up. Don't know why but this
has been known to prevent dialling.

I have replaced version 1.80 with 1.81 on the archive. This one is linked
with 68000 libraries, so will work on all STs. It also fixes most of the
other problems reported with 1.80.

3953. Mega ST2 (w/4 megs) for Sale.

Newsgroup: comp.sys.atari.st
Date: 1997-06-16 00:00:00 UTC
From: Sam Ramirez <sramirez@best.com>
Message-ID: <33A629E0.60D4B5F6@best.com>
Source record: 120794

I am selling my Mega ST2 (upgraded to 4 Megs). I recently built a second PC to set up a small Novell NetWare 4.1 network. I need the hands on practice for my upcoming CNA test. Anyway, I would like to get $200 for it. The price does not include shipping.

It includes the following hardware:

SM124 Monochrome Monitor
50 MB Hard Drive (Seagate ST157N)
Golden Image Hand Held Scanner W/Touch-Up software.

You'll need to buy a new cable that goes from the host adapter to the hard drive. I get occasional lock-ups which I've traced to the cable. Oh, the Hard drive is in an ugly but functional external case but it has worked reliably with the exception the intermittent lock ups.

I will include the following software:

Productivity:

Calamus SL (Desktop Publishing)
Outline Art (Vector graphics drawing program)
First Word Plus v3.14 (Word Processor)
STraight Fax v2.2x (Send/receive faxes)
Phasar 3 (Home accounting)
Silhouette (Auto tracing and Vector graphics editor)

Other Software:

NeoDesk 3 (Desktop replacement)
Diamond Edge (Hard Disk maintenance utility)
Diamond Back II (Hard Disk Backup)
Plus some other programs I can't recall at the moment.

Let me know if you are interested. I live in San Francisco Bay area. I hope we can work out something.

3955. RatSoft BBS modem question

Newsgroup: comp.sys.atari.st
Date: 1997-06-16 00:00:00 UTC
From: dpj@delphi.com
Message-ID: <xFAfiGn.dpj@delphi.com>
Source record: 120796

I've just been given a Delrina 28.8 Fax modem. I want to set it up on my RatSoft BBS. There are a number of default modem settings for modem initialization for the BBS, but naturally the Delrina is not among them. Anyone have any idea what the appropriate modem init. string might be to have the BBS recognize this modem? I've tried a number of the "included" modem defaults, but they didn't initialize the modem. Thanks in advance!

Hello !

I have a Mega ST 2, and i have some compressed files in different formats. I have also some TOS programs to uncompress them (e.g. gzip, zoo etc.). I have also a TOS version of "less".

1. Is it possible to redirect the output on a ST (i mean something like Unix and DOS pipes). It would be fine to read some texts without writing and deleting them manually.

1a. Is it possible to stop the output (as with the "Pause" key on the PC)?

2. I've tryed a trick from the FAQ - starting an application from an inactive window, but it says "... kann das angesprochene Objekt nicht finden" or something similar.

3. Is it possible to install a screen font and to see it also in the TOS output?

Thanks in advance
Guentcho

j> or STe with your Falcon, I understand the cable is using a different
j> connector for the ST, but can that be adapted or something to make the
j> drive work with the Falcon???

Yes.

As the Falcon has a proper SCSI interface you can dispense with the host adapter which comes with the ST(E) kits. You just have to remove the 50-pin plug which goes into the back of the drive from the adapter and replace with a cable coming straight from the Falcon SCSI port. You may have to go to an Atari dealer to get the right cable if you don't feel confident about making one up yourself.

Then you can sell the host adapter (around 20UKP) :)

c> to talk to for some Ram & how much can i put in ?

Yup. With a 1040 you can't just plug in more RAM but it's not that difficult.

You need a RAM expansion board (Frontier, Marpet) to take the SIMM RAM and
connect to the ST data/address bus.

You can either wait for an ad. for one of the above boards or ring Dave at
The Upgrade Shop (01625-503448). He is doing Marpet boards - 2Mb £48 and 4Mb
£72.

>Is there a way to print from Calamus or Calamus SL directly to a graphics
>file format of some sort (preferably .tif)? If so, what is this method???
>
Yes you can.
There is a module called dataformer. It containes two seperate
modules, one for raster and one for vector graphics. The Dataformer
raster module lets you write a file to disk in TIF, GIF, IMG, TGA or
other formats. You can let it write only one selected frame or a
whole page.
The second possibility is the printerdriver GEMIMG.CDT which lets you
print a document as a *.img file to disk (very usefull for use in fax
applications)
The third, best and most expencive solution is the Calamus Bridge
module which does all mentioned above, but with better (more precize)
results and lets you have pages output in the Postscript format.

This is is the Atari ST Quick FAQ

For the STE there is Substation (STE only I think), which is more a Wolf3D clone with no texturemapping. Other Doom clones are Falcon only.

Substation is commercial.

> I be able to use it with this setup?

No, it's just a 30 minute job of opening the machine, unplugging the old roms, plugging in the new ones, and desoldering and resoldering two jumpers (in fact 0 Ohm transistors).

However, you may experience some compatibility problems with games that don't like TOS 2.x. That's why there are Bi-Tos boards that allow you to switch between the two versions. It's up to you to decide if you need the downward compatibility with TOS 1.62 or not. I've only seen a few games that refuse to work since I did my upgrade, but I don't do much gaming, so I decided it wasn't worth the cost of buying a Bi-TOS board.

>
> Any comments on whether I should buy it to use temporarily, or just save
> the money for my eventual purchase of a Hades?
>

Well I guess that if your at the point of saving US$30 to buy a US$2500 machine later on, your not going to buy it soon, so go for the upgrade! But then I'm not the money-saving type :-)

> I visited an ftp site that had various versions of TOS available for
> download for people using ST emulators on the PC:
>

Naughty you!

> - Are these straight dumps of the roms, and usable by me?

They are (straight dumps), but they are not (usable by you). There seems to be no means for a normal TOS to boot one these images.

> - Are there any copyright infringement concerns if I were to d/l
> TOS 2.06, just to test it and see if I wanted to purchase the
> ROMs?

It probably would be a copyright infringement, but I really can't imagine JTS going after you for that. They don't even seem to mind seeing that these images are notoriously travelling around the net.

> - How would I load the TOS.IMG file into my computer? My original
> ST was a 520 with TOS 1.0 which was on a boot disk, but I never

Well, there are a few little programs that claim to do this (one specifically that allow 1.4 to boot on the 1.0 disk you mentioned), but none of these have worked for me, running 1.62 or 2.05 and trying to load all TOS versions. Unless someone decides to do this (it must be possible somehow) I guess you can't.

Thank you and others for your help. I found an archive called ST-TAR,
which I can use in the AUSPACK package. This works nice, first it
unpacks the tgz to tar and then tar to the files that are packed
inside.

In the end it was quite easy, but I'd never need to do it before
Thanks again.

It explain...

I've tested Starglider on my Falcon and on my STe, and I've got to
report that it's one of the new-roms incompatible game...

Perhaps by using a disk based TOS (you can use the 1.0 on the STe! yes!)
I'll try it.

Perhaps it's a material incompatibility

From: prajoux@laas.fr
Message-ID: <5o3jht$488$1@laas.laas.fr>
Source record: 120863

Hi there,

I have been thinking about buying some sort of removable media for my Mega-STE
for quite a while, but I actually didn't.
As time passed, I got the feeling that the Zip is more successful than the Syquest
in the Atari community. Considering that the Syquest has good features, especially
that it is a real hard-disk, I wonder why. Is it only a matter of price?
I would be happy to hear the opinion of some of you, fellow atarians.

Thank you.

Roland Prajoux, LAAS/CNRS, Toulouse, France (prajoux@laas.fr)

Roland Prajoux wrote:

> I have been thinking about buying some sort of removable media for my Mega-STE

I've got a ZIP, and it's like a hard disk: you can do D2D with it.
The main trouble with the Syquest is that they're not very reliable
- as I heard -
ZIP is more convenient for is smalls and toughs disks: you can mail them
(meme avec la Poste - french joke) without trouble!
BTW, if more and more people on Ataris use ZIP, it's not without reason
(ZIP disks are cheap!)

Look around on the various AB040 Web pages. Some of them have
compatibility lists. (Sorry, don't recall any addresses.)

Since you can turn off the processor caches and run programs in the old
RAM, there's little that can cause problems when running ordinary apps
on an AB040. I can't remember anything I've tried that didn't work, but
there certainly are exceptions.
Most programs even run fine in FastRAM with both caches turned on, though
copyback mode kills some programs for no apparent reason.
(Copyback is a data cache mode that causes writes to be done in the cache
instead of directly to memory. When it works it often gives a 20% or so
speed increase, but I don't think most AB040 users have it turned on.)

Debuggers generally don't work and 'low level' system extensions can be
problematic. Other operating systems probably won't work unless whoever
wrote them knew (and cared) about the 68040. MagiC, MiNT and Linux work.

With games I think there are three major problems:
- Timing
Especially problematic with 'advanced' copy protection schemes. Don't
expect to be able to run the original game if it's protected.
Some games also run far too fast to be playable...
(Backwards doesn't work on the AB040.)
- Exceptions
Quite a few games break even on an ordinary Falcon because of
differences in the handling of interrupts etc. Things certainly don't
get any better with the AB040, but not necessarily much worse either.
- MOVEM.L
According to Douglas Little, the 'move multiple' instruction seems to
lock out interrupts, causing dropped keyboard/mouse/joystick messages.
I've seen problems with Elite II that might be caused by that.
(Elite II is amazingly fast when run in FastRAM on the AB040. :-)

I've not tried many games myself, but those I was concerned about worked.
If someone writes something like Backwards for the AB040, I'd expect the
compatibility to improve a lot.

Yes, 4096 is a limit according to the 'TOS survival kit' document.
One solution that I used for a while was 'GEMRAM' + 'SHBUF'.
It loads GEM into RAM, and the buffer size is modified by 'SHBUF'.
Of course it eats a bit memory....

I own an Atari but would really appreciate having a separate keyboard,(slightly safer to spill coffee on).

I believe System Solutions(UK) sell a 'desktopper' system, but is there anything simpler, or cheaper. I ask in the hope that maybe you know of the modifications needed or could perhaps point me in the direction of a supplier.

I remember reading in the Atari press (a few years ago), about a simple device called D.E.K.A. 2 which would allow you to plug in a separate keyboard. Is it still available or maybe someone's willing to flog me one?

I previously used DEKA 2, but was bothered by bugs in the hardware that caused frequent key lockups. In any case, a PC keyboard doesn't have the same keys (or arrangement) as an ST keyboard, which can get quite annoying.

I'm pretty sure that someone has posted the wiring diagram for attaching a TT/MegaSTE keyboard to an ST, it is mostly a matter of attaching a 6-conductor RJ-11 type phone jack to your ST's keyboard connector (a bunch of pins sticking out of the motherboard).

Rich Tietjens mentioned in a previous thread that graphical instructions for the wiring are available at:

I use MagicMac on my LC475 and print out from Calamus via PowerPrint to an HP Deskjet 500. To use a QuickDraw printer I believe you need two further products, NVDI for MagicMac, and an NVDI driver for Calamus.

It works well enough on this set up, Calamus SL attempts to grab the entire MagicMac available memory on launch so if you want to run another program at the same time you have to launch that one first. It is certainly a lot faster on the 25Mhz 680LC40 than on the 8Mhz 68000 ST.

I am not sure that Outline Art v 1.0 will run under MagicMac, later versions might.

Later versions of MagicMac are supposed to run on the PPC but it is a 68K app and of course any Atari apps are 68K code only, so only later powerPC Macs that emulate 68K faster than any 68K Mac will be faster than what I have here.

The other mouse button is emulated by holding the Command or splodge key and the only mouse button, this is needed a great deal in Calamus.

Remember when 'Power with out the price' meant something at one time until Atari got greedy by hawking under powered and over priced computers? This is one of the reasons led to Atari's demise..

The makers of the Hades/Direct continue the Atari tradition with their underpowered and over priced line of 040 and 060(does Motorola still make these) ST compatibles..

Just say no...There are other alternatives to continue the enjoyment of the ST experience and best of class...

Umax Corporation, the maker of the popular scanners have come out with a class of PPC boxes starting at $949 that gives the Hades/Direct a run for their money.

Under the SuperMac label..

The C500/LT is a 100% Mac OS compatible box which consists a PPC 603e/180 mhz, 16 megs, 1.2 gig, 8x CD, 2PCI slots, keyboard/mouse and software bundle for $945!

With Connectix Virtual PC which shipped this week for $149 street(includes wintel 95 or wintel 3.1 allows to have the best of both worlds.. Can run dos, OS2, NT and Open Step(foundation for Rhasopy)...

This box will run the upcomming July Mac OS8 and Rhasopy..

Try that on a Hades/Direct...

Peter

Depending on your situation, it may be cheaper to buy a new tower (or mini
tower) case & re-house your ST motherboard.

They usually come with a power supply & with the extra space, you can
stuff all your external disks inside.

You can then use the old case solely for the keyboard, just extend the
cable back to the tower. If you want, you can saw off the empty section of
the old case to make the keyboard smaller. (Take the keyboard out first,
though...).

My experience with ZIP disks is that they are terribly unreliable.
Corruption happens frequently and for no reason - like leaving a ZIP disk
somewhere safe overnight, only to find that it is completely unreadable
and unformattable the next day. This is unpleasant, not only because
100meg of data is lost, but also the cost of a ZIP disk!

I personally purchased a Panasonic Power Drive (Magneto-Optical) and have
since not had any such problems. PowerDrive internal SCSI mechanisms can
be purchased with one 650meg cartridge for about $300.

Regardless, I would recommend a Syquest EZFlyer or SyJet over the Iomega
ZIP and JAZ drives any day of the week. I have found the Bernoulli
technology to be unreliable (I have had Bernoulli 20, Bernoulli 230, and
ZIP drives).

I think it's related to servers that support HTTP 1.1 as opposed to 1.0. For whatever reason, newer servers seem to be more picky about how you format a request. In any case, my goal is to have full HTTP 1.1 support; there are a lot of (potential) performance enhancements in 1.1 over 1.0.

Binary files are not at all welcome in discussion groups. Use
alt.binaries.atari or better put it on an ftp or http site. I had to
download this huge file but I didn't want to have it... thank you for the
loosed online time.

Bruno.

Not a problem w/my zip, and I use it as audio storage/backup. You do have to reconfigure AHDI or use ICD et al for the Atari (Falcon ;-)) to recognize it, since it can only be set up as scsi 5 or 6. This is very easy to do.
As I mentioned I use the zip as a b/u, then drop and drag appropriate files/folders to my "working drive" (Quantum) to do necessary audio editing/recording. Everyone in the world has a zip, so that's something to consider also. Have you seen the Nomai removable media drives? Check those out also.
Good luck. I think you'll be okay either way, to be honest.

Hi,

This won't have much of a train of thought.......but:)

:). The Afterburner and Nemesis combo will definetly make you feel that your
Falcon in alive. I have a couple of set-ups, so I have spent more time
testing the hardware than software.
The Nemesis makes about a 100% increase in speed over a stock Falcon with
the A/B fitted. Keep in mind, you will be cutting quite a bit on your mother
board to fit the Nemesis. The A/B installation is way more forgiving. You could
put your machine back to stock, and no one would be the wiser. The Nemesis is
worth the price however if just for the buffer mod that is included.
I tried my NOVA video card on the A/B card. There are a few quirks, but I don't
have the latest NOVA drivers to finialize my setup. Even running at 16Mhz bus speed,
the NOVA gets really hot. Some have found that it shuts down when run at bus speeds
over that. Might want to keep that in mind if you want to mix the two (Nemesis/NOVA).
The latest A/B drivers from BSS work great and are very easy to setup with the
configuration program. The A/B will only utilize the 40Mhz mode of the Nemsis
(in standard form). I was really excited about Apex Media supporting VGA 640*480 TC
mode, but you have to run the Nemesis at 48Mhz to get there, so your out of luck
with that setup. Kind of the same thing with Videlity. Stock Falcon users will
benifit from the Nemesis more than A/B users in the video mode department.
I just installed a ScreenEye on the A/B, and it works fine. Not
the quality that Expose was, but is better than VideoMaster by a long shot:).
Let's see, what eles.. I installed another Nemesis on my Mighty sonic machine.
It will handle 40Mhz too, but will fail at 48Mhz. The Mighty has on the card it's
own "clockpatch", and I think there is where the problem lies. The AS type chip is
not reliable at 48Mhz, and i'll have to put the machine on a scop to see if I
can get the firing edge of the clock in the right place with some high speed stuff.
I have also tried running the Mighty Sonic at 24Mhz with the 24Mhz bus. The clocks
are stable then, but the fast ram gets hot as heck!. Then VGA TC mode is available.
Maybe a fan on the ram might help. The major bummer software wise for me was
Rainbow Multimedia dosen't work. It won't work on the A/B, and won't work with
the increased bus clock speed the Nemesis allows. Otherwise, software compatibility
looks promising.

Still hacking away,

Mike

4000. Quantum Atlas w/030?

Do the Quantum Atlas II drives possess the same attributes that render them as incompatible w/the Falcon as the Fireballs? The pride/specs are so insane that it would be great if they did work with the 030. Anyone?

Hmmm, strange. I haven't really tried yet to connect a machine running
STinG to one with MiNTOS, but I do not see any reason why it shouldn't.
After all it works fine with Linux. I will certainly try MiNTOS soon too,
however.

Word has been received that this year's MIST Atari show will be held on Saturday, July 26, in Indianapolis, Indiana. The organizers say this show, the ninth annual, will be the final one.

This year MIST is moving to the Post Road Community Center, 1313 South Post Road, on the east side of the Indianpolis area. The new location is between I-70 and I-74, outside the I-465 circle freeway.

Show hours are 10 am to 3 pm, Indiana time. Admission is one dollar. In past years this show has had displays by vendors, hardware and software developers, magazine publishers, and users groups. All kinds of Atari computers and related products can be found at these shows.

Organizers of the show are: Charlie Sears (317-535-4829), csears at doe dot state dot in dot us. Jeff Hammer (317-244-8492), jghammer at indyunix dot iupui dot edu. Stu Huffman (812-988-7558), shuffman at doe dot state dot in dot us.

Not in the Atari community I don't think but the Zip is more sucessful
in general.

> Considering that the Syquest has good features, especially that
> it is a real hard-disk, I wonder why. Is it only a matter of price?

Now that it has been dicontinues (the 135) I doubt it as it always
seemed to be cheaper int he US, personally I got the Zip because I
thought it would take off better and I never really liked the way in
which Sqyqest drives worked, they always seemed quite fiddly to me and
I've heared bad thingsa bout their old disks. However the Syjet sounds
very nice, I'm pretty tempted to get one already.

: I would be happy to hear the opinion of some of you, fellow atarians.
:
: Thank you.

I chose the EZ 135 for these reasons...

1. It provides Termination power...the Zip does not...
2. It takes larger disks...135meg as opposed to 100meg.
3. The carts are less expensive...
4. The drive has a better warranty...
5. The carts have a better warranty...
6. It is faster in seek/access time, and in transfer rate.
7. At the time I got mine...the EZ was a good deal less $$$ than ZIP.

I've been running mine for about a year now...no problems so far!
Also, it has performed even better than I anticipated, as I use it
with my Falcon and CuBase Audio for D2D recording. I've done a little
work with as many as 8 tracks of audio with no problems, thoe I wouldn't
push it...In running some tests, I finally got it to choke when trying
to mix down 6 mono tracks to one stereo track while using some DSP FX at
about 2 minutes into the work where I had on purposely snipped and
fragmented all the tracks pretty bad to see if the drive could deal with
it. The test work was BADLY fragmented, and the tracks were all
over the disk. Expect to work with 4 to 6 tracks flawlessly however, I do
it every day :)

Either drive should be okay...mainly a matter of taste I guess.

Roland,

I have both, a SyQuest EZ135 (no longer available) and a
Zip. Personally I perfer the SyQuest as it is much faster
than the Zip. However, the Zip cartridges will survive rough
handling better than the SyQuest carts. Additionally the
SyQuest units are easier to install as they are true SCSI
units. The Zip can only be used at ID's 5 or 6. I think
IOMEGA may have saved something like 50 cents (US) per unit
by not making the drives fully SCSI compatable.

Are you looking for a PC utility or an ST utility ? On the ST there is good old Gemview available on most good atari FTP sites. If you don't find any PC stuff that will do the job give Pacifist (An ST emulator for the PC) a try with Gemview.

4015. Terminal troubles on serial port

Newsgroup: comp.sys.atari.st
Date: 1997-06-17 00:00:00 UTC
From: jmf@informatik.uni-koblenz.de
Message-ID: <5o5va7$n71$1@newshost.uni-koblenz.de>
Source record: 120809
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi there!

I connected a vt100 compatible terminal to my ST via the serial port. However, when I type process control characters like ^C or ^Z they are ignored by the shells (ash, ksh, tcsh). Strangely, the ^Y character (delayed suspend) has the effect the ^Z character is supposed to have, i.e. it causes the current process to stop. When quoting the control characters in vi with ^V, they are displayed so they must have been transmitted to the computer.

This is the /etc/ttytab entry:

```
ttya "/usr/sbin/getty vt100.9600" vt100 on remote secure
```

And here's the corresponding /etc/gettytab entyry:

```
V|vt100.9600:\
:sp#9600:ms=hupcl,isig,clocal:nl:im=:\
:hn=mounty:lm=\r\n%h console login\72 :
```

The stty -a command produces this output:

```
speed 9600 baud; rows 0; columns 0;
intr = ^C; quit = ^U; erase = ^?; kill = ^U; eof = ^D; eol = M-^?; start = ^Q;
stop = ^S; susp = ^Z; werase = ^W; lnext = ^V; min = 1; time = 0;
-parenb -parodd cs8 -hupcl -cstopb cread clocal
ignbrk -brkint ignpar -parmrk -inpck -istrip -inlcr -igncr icrnl -ixon -ixoff
opost
isig icanon iexten echo echoe echok -echonl -noflsh -tostop
```

Is this behavior a bug in the kernel or did I miss something in my configuration files?

Tschuess

: ~~~~~~
: Via the Net2Net NeST gateway - 90:100/999

: ~~~~~~
The advice to remove the dialing string is very good. I would also like
to point out from experience that Jr. Office requires approx. 3MB of
drivespace to run. Believe it or not, I got the program to run before I
bought
my harddrive (after many hours of trying things!). Because I have 4MB of
RAM, I was able to create a RAM DISK, copy & configure Jr. Office into
there and run it from there. I settup a prg. to copy the files into the
ram disk each time I needed to fax.
So be aware, even if you have a harddrive, when it fills up with
less than 3Mb or so, the prg. will cease to work (dial).

Well if you have Link2, then don't you have the ICD utils?
give them a shot!
bypass hard drive boot, run icdboot.prg from your floppy,
and then try formatting the IBM SCSI.
good luck.bonne chance

I have a Migraph and it does _not_ work on a Falcon. The Touch-up software
does work, but the scan option is disabled. There is a newer Migraph
Colorburst hand scanner for 030's. $339, ouch!

First you need Gemram or Romspeed, etc. in the Auto folder. Then put
Shbuf.prg in the Auto. Forget about the rom file it makes when run from
the desktop.

> Also, will this do any good with MultiTOS. I would think the patch would

Convert it to a GIF?? Try loading your file into Gemview (it prints color on a HPDJ) to test your graphic..

> Can Imagecopy print color? etc.

The demo of 3.5 does.

Why would we want to? Then we would be forced to use cumbersome, quirky, overpriced software and a bloated operating system. That is exactly what Atari users are interested in avoiding.

: Try that on a Hades/Direct...

A Hades is probably best for Atari software and operating systems, something that the PPC is not particularly good at.

Please allow us to enjoy computing our way. It is clear that you do not understand the ideology of those that stick with Atari computers, so it doesn't make much sense to continue needling us.

Don't you have anything better to do than to try and save the Atari community from ourselves? Are you some kind of Computer Zealot?

In any case, when my TOS machines outlive their usefulness, I'll surely be buying an IBM Aptiva (or some other well-equipped functional PC). I've no desire to get involved with any other sinking ships, and it seems clear to me that Apple is going down.

As much as I would like to see Apple get their acts together and provide some real competition for Microsoft, I'll only believe it when I see it.

> 5. The carts have a better warranty...

The Zip carts that I have all come with a lifetime warantee, whats better than that? IMHO the Zip disks are much more robust, the Zip disks are like floppy disks and the Syquests ones are like hard disks, which one do you think is going to survive the drop?

> Either drive should be okay...mainly a matter of taste I guess.

The Zip doesn't ahve too much going for it as a hard drive but it is a great replacement for a Floppy and unlike the 135, it isn't discontinued.

M> much cheaper than a year ago.

I agree the main problem will be a PPC-compatible OS for the Ataris. Today's TOS-versions will only run on 68xxx-machines and what use is there for a PPC that needs to emulate an Atari?
Same problem on the Amiga - there will be a new OS for the PowerAmigas called p/OS by proDAD in Germany, but as you said you have to port software to get it running on the new machines or the accelarators. This will be a huge problem - the question is will there be enough developers trusting the Amiga's market enough to port software to the PPC or even develop exclusively for the PowerAmiga. There might be chance for it if the p/OS does not only run on accelarated Amigas or Amiga-compatibles like the PIOS. It has to run on the existing hardware like the PowerMAC for example. AFAIK at first p/OS will come out for the 68xxx-Amigas, then for the PPC-boards and PowerAmigas (if they come true) and after that for other PPC-machines.
I think the Amiga's market today is much bigger than the Atari's market and the differences between the AmigaOS and others are much bigger than the Atari's compared to others - same situation with the hardware. This is the reason why there isn't a "MagiCMAC" or something like this fot the Amiga - it just isn't possible.

But AFAIC there is a project for a new TOS for PPC-platforms around.
The project is called FENIX. To contact please e-mail: f92sk@efd.lth.se
Sorry, I never contacted this address - just got it from the German Atari-mag.

Does anybody know about how to do this - putting an ST into a PC case?
I have a Desktopper but its not strong enough for my liking to put a
moniter on top.

Ie connecting the ST motherboard to the case and rehashing the outlet
ports. Access to the cartridge port, MIDI, and extended STE ports would
be a bit tricky on a tower system.

It sounds like you've got a duff batch of disks or some other problem with your setup, I've got just under 30 Zip disks and (touch wood) have not had any such problems with mine except when I used a PC disk without partitioning it first. It certainly sounds like an isolated incident as I'm sure if all Zips behaved like this they wouldn't be as popular or as depended upon as they are.

ImageCopy (from version 2, I think) has a marvelous screenshot facility when running as a desk accessory. It will do screenshots inside games that not only don't have a menu bar, but games that change resolution from TT Medium to ST Low without rebooting. I have screenshots of all 32 levels of Atom Smasher, for instance. Commercial, but worth it. Of course, I don't see how to load it as a DA when running an auto-loading game.

: > 100meg of data is lost, but also the cost of a ZIP disk!

: It sounds like you've got a duff batch of disks or some other problem
: with your setup, I've got just under 30 Zip disks and (touch wood) have

I manage more than 100 PCs, and a multitude of storage devices (including ZIP, Bernoulli 230, Pinnacle APEX MO, Panasonic PowerDrive MO, SCSI Tape, SCSI DAT, and CD-R). ZIP disks are no more reliable than floppies, which means you're putting a lot of eggs in each ZIP basket.

In my opinion, magnetic media sucks. I prefer magneto-opticals such as the Panasonic PowerDrive and Pinnacle APEX (both of which work very nicely on the Atari Falcon, by the way). Mitsubishi has a new 650meg MO that is supposed to be quite fast. I would recommend any of these over magnetic removable systems.

As far as the Syquest/Zip controversy, Syquest drives are faster, cheaper, and have a higher storage capacity than the ZIP/JAZ counterparts. I don't know of any reason to buy a ZIP/JAZ besides "everyone else has them". Everyone else may be losing their data sooner than they would like to. What is the shelf life of data on a ZIP cartridge? While the cartridges may be guaranteed, my data is not.

: I'm sure if all Zips behaved like this they wouldn't be as popular or as
: depended upon as they are.

Most people have no idea that there is corruption on their hard disks until it is too late, and ZIP disks seem to be particularly vulnerable to "normal" corruption. In any case, I find their drivers to be a pain, they conflict with other devices, and are not compatible with all of the computers that I have to work on.

Just because a thing is popular does not mean it is the best product. Advertising and image seem to have much more to do with the success of technological products than quality. "ZIP drives are popular" is not sufficient justification for a purchase. I'm concerned about what will keep my data safe and accessible, and have found that ZIP drives do not.

Tos is still copyrighted, therefore it is theoretically prohibited to copy and distribute it freely. However, there are quite a few TOS images floating around the net. If you're clever and know how to use a search engine you should have no problem finding one.

I recently bought an St, and I got a paper bag full of stuff with it. I figured them all out except this Synchro express box. The size is about that of a cigarette package and it fits into the Parallell port(the box has a male connector). There are one cord from it and that fits into the disk drive port(male) and a connector(female) which you can connect a disk drive.
That is Disk in, Disk out and it connects to the Parallell port.

What is it?

Youa re right they probably aren't much different in the reliabiltiy
stakes to floppies, but I've got 1000s of floppies which have never
failed me, the only ones that have failed me are crappy cheap disks and
I never put any important data on them. I've always maintained that a
Zip disk is just like a floppy.

> In my opinion, magnetic media sucks.

The Syqest is magnetic as are hard disks.

If you want long term reliabiltiy then of course, it's the most reliable
way to go.

> As far as the Syquest/Zip controversy, Syquest drives are faster, cheaper,
> and have a higher storage capacity than the ZIP/JAZ counterparts. I don't
> know of any reason to buy a ZIP/JAZ besides "everyone else has them".

I (personally) still believe theat the disks are more robust (not
necessarily more reliable), I would much rather stick a Zip in an
envelope and mail my software to someone rather than put it on a Syquest
cart. If you want to exchange data "everyone else has them" is a good
treason, on the PC you can use them through the parallel port so it's
suitable for people ont he move with Laptops etc too. I'm not trying to
argue that the Zip is a better than a EX135 because overall it is not
but it does have advantages.

> Everyone else may be losing their data sooner than they would like to.
> What is the shelf life of data on a ZIP cartridge? While the cartridges

I don't believe the shelf life of a Zip to be any different to a Syquest
cart, is it?

> : I'm sure if all Zips behaved like this they wouldn't be as popular or as
> : depended upon as they are.

>

What do you mean? I scan all my hard and removable disks regularly and
I've had quite a few Zip disks since they were first released and they
are fine.

> In any case, I find their drivers to be a pain, they
> conflict with other devices, and are not compatible with all of the
> computers that I have to work on.

I've had no problems with the drivers on the Mac or ST. As you well
know, driver conficts are harly a rarity on PCs with so many variation
between machine.

I'm sorry to hear that but mine appear fine. If theyw ere as unreliable
as you say, don't you think the computer media would have picked up on
it a bit sooner?

My Atari is not connected to the internet. I use a PC(shame on me).
How can I download cbhd and utilities for my STacy if I'm on a PC?
If I can't, is there anyone near Los Angeles, that could sell me the
discs.(HD formatstuff, CBHD etc)
Thanks

4063. sources for old BBS games?

Newsgroup: comp.sys.atari.st
Date: 1997-06-18 00:00:00 UTC
From: skeezix@interlog.com
Message-ID: <5o9a2b$al8@gold.interlog.com>
Source record: 120764

Does anyone remember the old BBS game "Cows"? Mount NevereST?
Space Empires Elite? DDST? I used to run a BBS, and I've got ther
executables still, on an old hard drive. Nowadays, I'm half tempted to
write a socket layer that pretends to be an ST commport, and run some of
these old games as a daemon on one of my machines, so peopel could telnet
in and play them as if it was a BBS..

Not really hard to do. If I had sources :/

Does anyone have or know where I can find the sources for any of
these games? I know SEE was writter later in GFA Basic (and I'm really
not too interested in writing a GFA->Perl translater :P), but the
original Jon Radoff version woudl be cool to have... The others were
written in C, I think.

Please respond in email, since I don't peruse this group much and
have no time since I got a new job..

4064. Falcon games, TOS 4.4?

Newsgroup: comp.sys.atari.st
Date: 1997-06-18 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <01bc7c19$f5544ae0$143bd4cc@Primenet.Primenet.com>
Source record: 120765

Is TOS 4.4 a weird TOS like 2.06 was on the ST/STe? I can't get Oxyd to run and I'm trying to figure out why when every other game I have tried works. I have tried different Oxyd-Falcons from different locations so I know its not the file thats messed up. It's really starting to annoy me. I have tried running it from a clean boot, bypassing the HD, and I always make sure its in 640 by 480 at 16 colors like it is supposed to be, and it just loads for a few seconds and stops and the screen goes black.

Hi jon,

in a message dated 16 Jun 97 you write:

jm> Anyone else having trouble with 1.81 mintnet ovl on a
jm> Mega ste?

I've got trouble with it too on my Falcon running Cab 2. So I still use the "old" 1.77.

I get 'bus error' or some sort when Cab is 'resolving host' and can no more exit from Cab, needing to reboot te machine :-(

Thaught it could be hsmodem7 (weird idea indeed) and switched to f_serial with no result.

Need now to try with a "clean" setup with just what is needed to run the whole thing.

Bye jon,
/Pascal/

Hi Hallvart!

>How on earth were you able to change the IDs of those fonts?
>We're talking about the vector fonts now, aren't we?

I don't know how Guy does it, but for Speedo fonts the ID is contained in bytes 20 and 21 (in hex) and can presumably be changed in a sector editor. Don't forget that NVDI (and I think SpeedoGDOS too) adds 5000 to the number so that they range doesn't overlap bitmap fonts.

I haven't discovered where the ID is for TrueType fonts - if in fact it's in the file, because when NVDI comes across a font without an ID it assigns it one, and I am not at al crtain whether it is always the same one, either!

I too have had problems with TT fonts (from the Monster CD, for instance) not loading into NVDI 4, even though they were completely OK in NVDI 3! Even with font checking switched off int he CPX and the INF file, NVDI complains that the font is damaged. I must admit I haven't tried loading it a second time - must do that. Don't think I got any .ERR files, either.

Regards
Peter

4071. TOS Fix for RTS/CTS hardware flow control

>Peter
>-formerly sinclap..

I must admit, I'm beginning to think it's time to abandon my TTs and
Falcons as well. The cost to upgrade them to decent speeds just doesn't
seem justifiable given the other hardware that's available now.

Which is not to say that I look forward to running any variant of MacOS,
Rhapsody, or Wintel shit on a home system. I think, however, that with
Motorola's new 300MHz PPC603e systems MSRP ~$2900, it's high time to put
some serious thought into a multi-OS machine.

What's really needed now is a VM-style micro-kernel, (Fenix sounds interesting
in this respect) that provides services to higher-level kernels above it.
(By "VM-style" I mean IBM mainframe style virtual machine, not virtual
memory.) Taking this approach, I would consider running MacOS, MiNT, and

Win95 as guest-OS's each in their own virtual machine. Given the flakiness of MacOS and Win95, the lack of preemptive multitasking and lack of memory protection in MacOS, etc., it would be a major step backward in system reliability to simply run an ST emulator under MacOS.

A proper virtual machine implementation would pre-emptively schedule each of the guest OS's above it, and would totally isolate each OS from crashes in the other. I suppose there should be a disk & memory-sharing facility, although that really doesn't fit within the normal definition of a VM.

Something to think about...

F > Wich C compiler do you use, why, and where i can find the last
F > release ?

F > so wich one is the best?

Trying to start a fight, I see.

I have personally only used Laser C (orphanned) and Pure C (v 2.0
tied up in a legal battle with Borland). Of the two, Pure C is far
better. (Besides, Laser C won't work on a TT030.)

Favorite features:

1) Double clicking an error message opens up the source file at the
corresponding line.

2) Double clicking a bracket, brace or parenthesis will highlight
all the source between it and its matching close bracket, brace or
parenthesis.

3) Online hypertext help.

4) Can generate 68030 and 68881 (FPU) code.

5) Very good source level debugger.

Charles T Stanley (stanley@stanley.wintermute.co.uk) wrote:
: 2) Re PPP connection: SLIP works perfectly on the present telephone
: number, but on the new number it won't (even with the suggested
: addition to our logon-name of "%slip").

You could log on with a "terminal program" and see exactly what happens -
your chat script is probably slightly wrong.

: 3) The ISP is moving us over to PPP on a new tel number.
: The ISP techies cannot or will not tell us (all TWO! of us Atari users
: in Aberdeen) what are the requirements for the Logon sequence
: (this applies to both STiK and Oasis2). We can get as far as seeing
: the received "Password:", but nothing else happens, no matter what
: we put into our logon files.

That is normal for PPP. After the password, you will probably get garbage
coming up, which can be understood by your ppp software (pppd). If not,
then I think this means the remote end is waiting for you to initiate the
connection, which perhaps requires some addition parameter to pppd. I am
unsure about this, however.

Note that I have never used Oases or STiK, however, so perhaps the
problems is different in this case. Actually, I didn't think STiK
supported PPP, which might explain why you had no luck with STiK.

:
: Can you either inform me how..or if it needs a commercial program
: then can you convert some for me?

The trouble is that SEQ files are bitmaps, whereas 3d2 files store actual
3D shape data. I don't know about obj, but I suspect that is also 3D -
what software is it that uses obj format?

It's a bit like comparing a bitmap graphics to a vector graphic, except
that you have the added complexity of an extra dimension. Also, SEQ is an
animation while 3D2 defines a still scene.

Because of this, it is not possible to convert between these formats.

What exactly where you wanting it for? Maybe there is another way to
acheive the results you require.

The easiest way would be to get a serial interface for the Portfolio, and then just transfer the files with XModem. There are several apps for the Portfolio that support XModem over a serial line.

You can get a serial interface (as well as all kinds of other items, hard drives, floppy drives, tape drives, upgrades, PCMCIA adaptor and heaps more) from Stefan Kaechele, Stefan_Kaechele@FR.Maus.De, unless there is some place closer to you that sells these items. I heard there is also a Portfolio club in the UK that can sell you Portfolio related items.

ONLY AVAILABLE IN THE:
U.S.A, CANADA VIRGIN ISLANDS, AND PUERTO RICO

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax, pager, voice-mail, and cellular numbers and give them your New "Virtual Office" 800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone? Wouldn't it be nice to be able to give everyone just ONE phone number that will find you anywhere you are? Even out of town, or in a restaurant, or even on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving, Even without a fax machine! E-Mail Notification and Delivery, Without a PC!, Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888 Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial, Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection, Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web sight:
http://www.mynumber.com

* Based on our best priced plan.

s> keyboard,(slightly safer to spill coffee on).
s>
s> I believe System Solutions(UK) sell a 'desktopper' system, but is
s> there anything simpler, or cheaper. I ask in the hope that maybe you
Couple of alternatives.

1)Extend the present keyboard lead, you'll need to put the Atari keyboard
into a seperate case, I've seen a very smart job using a PC keyboard casin

2)Buy a PC keyboard interface. System Solutions and The Upgrade Shop do them,
I don't know if they are the same.

Both require some soldering.

I use the AT Keys interface from SysSol, it's very good IMO, but you need to
remove the keyboard processor and put it in the interface.

Speak to 'ya later!

Hi Authur,

You can find an excellent little prg called "convert" at the Nova Scotia
Atari Computer Users Group site. It obeys the first law of Thermodynamics,
KISS or "Keep It Simple Stupid". I like it.

http://www.ccn.cs.dal.ca/Technology/NSACUG/NSACUG.html

Follow the links to the Atari download section and connect to the
link to Compression/Conversion Programs. convert.zip (~9k file)

That's about all you'll need.

Terry May (Terry.May@rebel.ronly.org) wrote:
: I would like some opinions on the best accellerators for the Falcon, in
: terms of price, ease of installation, performance and most importantly,
: compatibility. Any input would be appreciated.

I would recommend the Nemesis. It's very cheap (about 60UKP), very
compatible (you're able to switch back to the standard Falcon030 mode)
and provides an approx. 50% speed increase in all areas (including the
DSP). The only drawback is that the installation is quite hard
(it involves cutting tracks on the motherboard and quite a lot of
soldering). There are companies that will help you with the
installation, but that will cost you about 40UKP, though.

The Nemesis is available from Titan Designs.

All the best,
Daniel

All of the above assume a TOS 1.4 with old 1987 MEGA ST2.

Thanks for help!

-Dominic domgird@megantic.net

Hi Dominic,
You need HSMODA7 package to solve your rts/cts problems. Go to
http://www.flinny.demon.co then click on downloads and grab it from
there.

Try using PARCP (available from the shareware/cyberstrider collection
on my web site. You can then attach both computers via the
parallel/printer ports and copy files across. :) Program lets you copy
programs from pc to pc, atari to atari and atari to pc or pc to atari.

>--
Hallo Howard.

Thank you for mailing me the 1.81 version of CAB.OVL for MiNTnet,
several days ago. You didn't recieve an anwer from me though I send
you two mails but they bounced back after five days. Anyway, I put
this little note in the newsgroup because I don't want you to think
that I'm unpolite. The OVL works fine now with Cab 1.5 and a little
with the demo of 2.0. (after a while it crashes) It is very fast!
My compliments!

Jan Diertens.

If you're looking for a used Migraph hand-scanner, you might want to
contact Kent Kordes, owner of Systems For Tomorrow, an Atari/Amiga
dealer in the Kansas City region. He sells both used and new hardware
and software, and has scanners from time to time.
email: kordes@SystemsForTomorrow.com
website: http://www.systemsfortomorrow.com

As far as scanners you can buy at regular computer stores, you can use
them if 1) you have a SCSI interface on the Atari (ICD's Link, etc), and
a scanner driver written for Atari. (I'm not sure if you need a SCSI-2
adapter, or can get along with a version 1. I use a Falcon, so my
system's at SCSI-2.) The latter limits you to a few kinds of Scanner --
Hewlett Packard and Microtek drivers can be purchased from Homa Systems
(http://www.magmacom.com/~nima) The drivers cost about $120, so the
investment is pretty steep. (The HP scanner driver does not come with
any editing software, so you'll also need a graphics package.)

Hope this helps.

Linda Peckham

I don't know which one is the best. This kind of question always lead to endless discussions.

I have been using Lattice C for years now, and I don't care if it is the best.
All I can say is that I am very satisfied, that it is very complete and well documented. It is sold by HiSoft in the UK.
If you are interested, try sales@hisoft.co.uk or www.hisoft.co.uk .

I have been offered a 19" digital svga screen very cheap, wich I would love to use on my falcon. The only problem is that I've been told that the monitor only works with Targa graphics cards. That is beacause the sync signal is attached to the "red" signal on those screens. Is there a way (simple) to overcome this problem?

As much as I hate to say it, you and I might not have been looking
forward to the MacOS like it's a big step forward and it certainly
doesn't feel like it but using MagicMac or my ST really does feel like a
huge step backwards.

> What's really needed now is a VM-style micro-kernel, (Fenix sounds interesting

> protection in MacOS, etc., it would be a major step backward in system
> reliability to simply run an ST emulator under MacOS.

MagicMac doesn't exactly run under MacOS but alonside, it is an OS in
it's own right, it isn't (AFAIK) affected by the problems of the MacOS.
I don't know about the VM Micro-Kernel but the PPC is a VERY good choice
if you want to run multiple OSs, it has more than enough raw power to
emulate very effectively.

> A proper virtual machine implementation would pre-emptively schedule each
> of the guest OS's above it, and would totally isolate each OS from crashes
> in the other. I suppose there should be a disk & memory-sharing facility,
> although that really doesn't fit within the normal definition of a VM.

I think maybe you should hang onto your TTs for a while and see what
Rhapsody turns out like, it reallyt could be the sort of thing you are
looking for and I hope it is as good as "they" say it is.

New at Systems For Tomorrow
~~~~~~~~~~~~~~~~~~~~~~~~~~

New!!!
Scan X for TOS Computers $49.99
Microtek E3/E6 scanner driver is an easy to use GEM application
that provides full access to most Microtek single pass scanners,
mainly the 24bit Microtek E3 & and the 30bit E6 flatbed scanners.
Features of ScanX for Microtek scanners: 24Bit (or 30bit) (16.7 M
colors), 8Bit (GrayScale), 1Bit (Monochrome) HalfTone and LineArt,
Variable resolution settings: 50 - Max. supported by scanner,
Contrast setting, Brightness setting, Exposure setting, upto
8.5"x14" scanning area, PreScan Window with Clipbox, Scanning
velocity setting, 12 built-in HalfTone pattern setting, Fast
direct to disk scanning (little memory usage) for 1 & 8 Bit
scanning, Save images as IMG and TGA, Positive or Negative
scanning, BackTracking, 3D modern look, MultiTasking friendly
scanning, and more. From Homa Systems House.

New!!!
Mega Mines for ST/STe/Falcon $9.99
Mega Mines is an addictive version of the now classic,
minesweeper game. Can you locate all the hidden mines, given
only the number of mines next to cleared portions of the field?
A good logic game to give the old brain a little work out.
Features 3 difficulty levels, Digital Sound, Extra Life bonuses,
and Extra Time bonuses. From 999 Software.

Tetris II Strikes Back for TOS Computers $12.99
Tetris II: Strikes Back includes all the fun and excitement of a
traditional tetris style game, plus the enhanced Tetris II, where
you have specific objectives to be carried out on each level. Both
Tetris and Tetris II include a Two Player mode, and the optional
addition of bombs to help you out of tricky situations.
Tetris II Strikes Back is available now in either an ST/STe
version (Item#21165) or a TT/Falcon version (Item #21360) for only
$12.99. From Empty Head Software.

Power Up! for TOS Computers $19.99
Power Up is a great top view racing game for the Atari ST,STe,TT,
and Falcon computers that was inspired by the classic Rally
Speedway for the Atari 800. It provides top notch racing fun.
Power Up is also similar to the more recent Power Drive Rally for
the Jaguar, with the notable addition of a Split Screen Two Player
Mode.. Some of Power Up's features include: One or Two Players,
~~~~~~~~~~~~~~~~~~~~~~~~~~

60 torturous circuits, brilliant 32 color graphics on all
machines, full DMA sound support for STe, TT, and Falcon Owners,
and Includes a track editor for creating new race circuits. From
Emply Head Software.

Desktop Solitaire for TOS Computers $19.99
A GEM friendly implementation of EIGHT classic solitaire Card
Games! Includes: Baker's Dozen, Demon, Fourteens, Golf,
Klondike, Poker Square, Pyramid, and Scorpion. Requires 640x480
resolution in Monochrome, 16 or 256 colors. TT or Falcon
recomended. For more info, and a playable demo, go to:
http://www.SystemsForTomorrow.com/kordes

Myst for Jaguar CD $19.99
Possibly the best graphical puzzler of all time.

Super Asteroids/Missile Command for Lynx $19.99
Battle Zone 2000 for Lynx $19.99
Joust for Lynx $19.99
Three great games for the Lynx!

Face Value for TOS Computers $69.99
Visual style GFA BASIC programing! A true must have for GFA Basic
programmers. For more info go to:
http://www.SystemsForTomorrow.com/kordes

Also Available:
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
Plus about 400 additional products for your TOS Computer!

4114. Atari Computers For Sale!

Newsgroup: comp.sys.atari.st
Date: 1997-06-19 00:00:00 UTC
From: bensmith@linda.teleport.com
Message-ID: <5ocja8$b92$1@linda.teleport.com>
Source record: 120718
Cross-posted to: pnw.forsale,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

I've been recuperating from serious depression & treatment at a Mental Hospital. I've still got bills to pay, so I'm going back to work in a limited capacity. Selling Atari in the U.S. I can handle. But for now, I'm cutting back on selling abroad as it's hard enough when I'm in good shape. So I'm dealing with depression in the usual way. 1) Don't make promises I can't keep. 2) Only set goals within my reach. 3) Commit myself to taking weekends off and keeping my mind off of work. Lessons we could all learn.

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Go for the HSMODEM patches suite, it is quite excellent, and fixes more
than just this one problem with the serial interface. It is HSMODA07.LZH
on any major BBS or ftp server. Mail me if you have trouble finding it,
I'll put it on my web page soon too anyway.

Cheers Peter

I figured it couldn't run on anything more than TOS 1.4, so I guess I need
1.0 on a disk...

So can anyone please tell me where I can find or buy a copy? Or if that's
impossible, then how can I use the TOS 1.0 image to boot up with? It's
that I figured it's the most obsolete version that's needed for playing
old games and I do have 1.62 which doesn't, at least I'm trying to do this
ethically.

So far, I still have no idea on what to do other than run around and shoot things. On the starship, I have to find tools to fix the engines and find a way to enter the locked door(I think the ring might have something to do with it but I'm not sure on it)

Anyways, I'm never good with these text adventure puzzles... :(

At the risk of sounding my own trumpet :) Get hold of POPwatch from my
website, 42BBS, or I could email you a copy.

POPwatch will allow you to download your email from a POP3 server via STiK,
and Oasis2 will process it correctly. It's more reliable than using Oasis2's
POP3 routines!!!

>2) Re PPP connection: SLIP works perfectly on the present telephone

>addition to our logon-name of "%slip").

Sounds like the new number might not be slip. Could be CSlip. Better check
with the ISP.

>3) The ISP is moving us over to PPP on a new tel number.
>The ISP techies cannot or will not tell us (all TWO! of us Atari users
>in Aberdeen) what are the requirements for the Logon sequence
>(this applies to both STiK and Oasis2). We can get as far as seeing
>the received "Password:", but nothing else happens, no matter what
>we put into our logon files.

Use a terminal program such as CoNnect to see the actual conversation
between client and server.

>4) We are both tempted to move to another (very northern) ISP which
>does aupport Atarians, but only with previous versions of the progs.

Not sure what you mean by 'previous versions of the progs'? :)

Remember that STiK only supports SLIP. STiNG supports SLIP and CSLIP.
Neither support PPP :(

We are very sad to announce that Dag Dao, a dear friend
and Atari user is dead.

Dag Dao was the SysOp of Dada & Surrealismus and he was a
great friend and companion to us all in SAK/Scania in Sweden.
Dag choosed to leave this life all to soon, without leaving
any messages behind. The only thing he left is a big black
hole in our hearts. We are all very sad and our thoughts
and minds goes to Dags family. Dag was a real nice person
who always though about others before himself. It is with
great sadness we announce this, and we will really miss Dags
happy face in our clublocal. A great Atarifriend is dead.
May he rest in peace.

4124. Re: java virtual machine

Newsgroup: comp.sys.atari.st
Date: 1997-06-20 00:00:00 UTC
From: c_graham@patrol.i-way.co.uk
Message-ID: <33a9d869.0@news.i-way.co.uk>
Source record: 120630

Nicolas Mailllot <maille@club-internet.fr> mumbled indistinctly:

>does anybody know if java virtual machine exist on Atari???
> thank you

Well, I use my falcon for development prototyping for my day job
(interactive TV systems) and I've reworked the whole JVM from
scratch - it's quite usable on an 8Mhz 68K, well quick on a 32Mhz 030.

Unfortunately, as it's a day job project (unlike DUftp, DU-Debug,
XaAES, CLA, etc), I'm not allowed to give this one away. Or indeed,
release it at all :(

Use this as an encouraging note though, it's perfectly easy to do.
And fast enough - but only if you don't do a direct port of Sun's
JVM source code (they've got like, a 240 branch switch statement
as the core of their virtual machine - real dumb).

The book to get for anyone who wants to do it is:

The Java Virtual Machine Specification,
by Tim Lindholm and Frank Yellin. Pulished by Addison-Wesley.
ISBN 0-201-63452-X

It's got everything you need to code it, but you'll need a set of the
Java Standard libraries and a compiler as well (Sun released source
for these, so they're not to hard to come by - you may have to sign
a license first, but it's free).

If anyone picks it up, they can mail me for broad hints on how I
approached it....

Craig.
(XaAES, CLA, DUftp)

4125. ANNOUNCE: New Releases: XaAES, CLA, DU-Debug

Newsgroup: comp.sys.atari.st
Date: 1997-06-20 00:00:00 UTC
From: c_graham@patrol.i-way.co.uk
Message-ID: <33a9d8f8.0@news.i-way.co.uk>
Source record: 120631

Ok, at long last I've updated the Data Uncertain WWW page. First
update in a long while, but by way of apology, there's a load of
new programs up there. Here's what's in the download bay:

- A new release of XaAES (beta 0.7). Fresh from my hard drive....
...full C source and 68000 binary release
- DU Debug. First release of a text based source level debugger
for Lattice C + MiNT. Includes C source.
- CLA v2. The full version of the CLA v2 digital design & simulation
package. (Electronics/Schematics).
- CLA v3. Version 3 of CLA (again, the full version). I've put both up
as they are VERY different. v2 has an interactive simulator (like
the one in Galaxy CAD), v3 is much more modern and easier to design
with. Supports GDOS, NVDI, STGUIDE context sensitive help, Enhancer,
AES4.1 (iconify), colour icons on all machines, etc
- FSMedit. Finite State Machine CAD package with limited synthesis
facilities. Exports VHDL, PALASM, PASSM and GEM metafiles.
- FSMsynth. Add on synthesis tool for FSMedit - much better synthesis
performance than FSMedit (I used it to produce a couple of systems
when I was at University doing my M.Eng).
- CLA-VHDL. A very limited implementation of VHDL. Compiles to CLA
.NET files that can be included into a CLA schematic.
- DUFTP1.13 - a release of DUFTP that I meant to put out 18 monthes
ago and forgot about. If anyone still uses it, this fixes the
lock-up when a transfer is stalled.

Everything here is my own work (except XaAES, which has contributions
from lot's of folks).

Oh yeah - the address (for those who've not come across my unreliable
person before):

http://www.i-way.co.uk/~c_graham/

Atari Teenage Riot (ATR), are a Digtial Hardcore group from Berlin.
Indeed, all ATR material is composed using an Atari 1040ST and a sampler.
The "frontman" and "composer" of this group, Alec Empire, also has other
releases. (from ambient to hard-step drum&bass, to acid jazz...) other
equipment includes an Atari Falcon and a Sequential Circuits Six Trak
analog keyboard...) and of course, Cubase is the software of choice..

destroy 2000 years of culture,

Can anyone tell me if it is possible to hook an Atari 1040STfm to a
Commodore monitor.

1-If it is possible where can I get a cable ?
2-How much would it cost ?
3-How does the quality compare to the Atari SC1224 ?

Thanks
Tony M

THE ATARI ST QUICK FAQ
v1.4 - June 2nd 1997

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the same questions over and over again, here is a quick list of the most Frequently Asked Questions (FAQ) and, hopefully, useful answers.

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA) HTML version

or

ftp://ftp.sn.no/user/hallvart/atari/info/quickfaq.txt (Norway) ASCII version

If you don't have web or ftp access, send me an e-mail at the following address, and I will be happy to send the FAQ to you:

bales@garonne.stortek.com

This announcement is manually posted once every week.

Nick

It's mostly small bug/compatibility fixes, including the Limit Memory problem.

Just download it, sheesh. It's all there in the README. :-)

From: Stefan Krumm <krumm@geol.uni-erlangen.de>
Message-ID: <33AA9C16.ED984E1A@geol.uni-erlangen.de>
Source record: 120643

Hi,
I have a lot of measurement data files that were produced under
GFA-Basic 2.0. The files contain a binary array of float variables (6
bytes). As I do not longer have an Atari at hand, I would like to
convert these files to be input into Windows Programs (sorry).

Can anybody help with information on the bit-wise encoding of the 6
byte IEEE float format used in GFA-Basic or does somebody have a C
routine that performs the conversion to 4byte float or 8byte double?

thanks
Stefan

>
>The trouble is that SEQ files are bitmaps, whereas 3d2 files store actual
>3D shape data. I don't know about obj, but I suspect that is also 3D -

It is...Yes I have learnt a lot more about the files since my
original post, unfortunatly not from the newsgroups as no one would
seem to know?... but from trial and error,
Having little knowledge of 3d at that time, I knew CYBER could edit,
and I knew I could use OBJ and I knew I had a program that would
convert 3d2 to obj, the confusing issue is that I have also been told
that CYBER can save 3d2 objects as well, I presume CYBER has one prg
for making 3d2 and another for peicing them together to make
animations,

>what software is it that uses obj format?

STOS :), maybe other stuff?, but I can use obj in STOS using
practically nil processor time, The file format can't be too old as I
used the same routines for an intro for STOSSER diskzine about 2 yrs
ago...

>Because of this, it is not possible to convert between these formats.

Yes, I am a little less confused in the matter now, but still have
the same problem,

>What exactly where you wanting it for? Maybe there is another way to
>acheive the results you require.

well you asked hehehe :)

I have a CUBE.OBJ and i wanted to place and ATARI logo on one of the
faces, and maybe another logo on another face,

With CYBER I know intricate 3d animations are possible, this is where
I got mixed up,

3d2?, well maybe placing a 3b object that is an ATARI logo onto the
CUBE will do the trick?, I realy dont know, I had hoped someone with
the packages or someone who uses these files would be on the internet,

Any help, thoughts ideas you can offer would be apreciated thanks
<SMILE>

Cheers !ynoT (ATARI Programmer)

4139. New Service for your "Pager"!!!!!

Newsgroup: comp.sys.atari.st
Date: 1997-06-20 00:00:00 UTC
From: <>
Message-ID: <5oee59$s3@mtinsc02.worldnet.att.net>
Source record: 120645

ONLY AVAILABLE IN THE:
U.S.A, CANADA VIRGIN ISLANDS, AND PUERTO RICO

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax, pager, voice-mail, and cellular numbers and give them your New "Virtual Office" 800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone? Wouldn't it be nice to be able to give everyone just ONE phone number that will find you anywhere you are? Even out of town, or in a restaurant, or even on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving, Even without a fax machine! E-Mail Notification and Delivery, Without a PC!, Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888 Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial, Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection, Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web sight:
http://www.mynumber.com

* Based on our best priced plan.

From: dipching@ping.be
Message-ID: <866832866_OASIS_@ping.be>
Source record: 120650

Hello,

Is there anybody here who has succeeded to run the Oxyd2 program on a
STF, STE, MEGA ST(E), TT030 ???

Strangely this program was made in 91' but II DON'T WORK CORRECTLY on
these machines !!! The games begin but in place of having the correct
graphics (monochrome only 640*400 = ST High) ... you have strange
numbered tiles ....

And the most amazing thing is that Oxyd 2 works on a Falcon in ST High
resolution ... the graphics are right !!!

This is something really strange ...

With a friend we had purchased the Oxyd2 book at the last Atari Messe
because you need it to go further than the ten first levels ...

BUT IMPOSSIBLE TO MAKE IT RUN ON THE RIGHT MACHINES IT WAS INTENDED TO
RUN ON !!!!!!!

Please help

We have the same problem with SPACOLA, another Meinolf Schneider game
which is also intended to work on machines other than the Falcon ...
You guess ... On the Falcon it runs without any problems !!!

Thank you very much for any kind of help about that !

NOTE; You can find the game at:
ftp://gigaserv.uni-paderborn.de.
/pub/atari/games/

It's OXYD2.LHA file

Thanks

jo

So far, the only modeler for POV-Ray that I've found is the EB_Modeler... The guy who wrote it is French, but does anyone know if he is still supporting it? I have written to him a couple of times, and have not gotten a reply. I'd really like to purchase the rights and source code from him to further develop this fine software, if he's not going to. I'm pulling my hair out without a modeler for my Falcon... If anyone has any info, please write me back...

: Me too, but how much does it cost?

PowerDrive Internal Mechanism (650meg MO + 4x CD-ROM) $ 299
Pinnacle Apex (4.6gig MO) $1599
Mitsubishi MCA230LC (Fast 230meg MO) $ 299
Mitsubishi MCA640 (Fast 640meg MO) $ 529

The cost is high while the speed of these drives are slower than
comparably sized hard disk drives. The advantages are that you probably
won't lose all of your data.

I sought out MO drives after my hard disk crashed and both of my floppy
backups were corrupt. I lost several years of work. That is something
that I would prefer not to experience again, and therefore, the cost was
justified for me.

4150. ZIP and Falcon...

Newsgroup: comp.sys.atari.st
Date: 1997-06-20 00:00:00 UTC
From: "Jon Hull (CS)" <hull@eng.usf.edu>
Message-ID: <Pine.GSO.3.96.970620165807.15025A-100000@suntan>
Source record: 120656

I have a Falcon030 (4.04/4M RAM/85Mi/530Me) and I just purchased a SCSI ZIP drive from a friend of mine that's selling his Mac and getting PC. I have a cable that has a 50-pin SCSI II end and a 25-pin SCSI I end connecting the ZIP drive to the computer right now. My question is: Which SCSI ID should I have it set to and should the terminator be on or off? I have unplugged the external 530M drive and only have the internal drive active (and the ZIP). I have formatted the disk (deleted the PC/Mac tools on it) and tested for bad sectors (just in case). I have AHDI 6.05c installed on drive C: as my boot software, but it isn't seeing the ZIP drive. Do I need different software installed to boot from, or am I missing something?

His $200 price may be a little bit high, in my estimation, but why do you
think that a 1.7gig Maxtor SCSI hard drive would not be worth more than $20?
Why do you call this hard drive a "bookend?"
Do you know something that I don't know? Please enlighten me.
Thanks

Actually you can pick up a copy of COREL 3 for next to nothing and use
it. It will read GEM files from the ATARI on a PC and give you a decent
graphics program at the same time.

: How about $20.00. It might prevent some old magazines from
: blowing away. That is a good price for a bookend don't you
: think.

$20.00 for a 1.76 gigabyte drive? Who crapped in your corn flakes, that
you need be such a jerk? $200.00 is not unreasonable for such a drive,
including the power supply and case.

Hello Users,
here is the ultimativ programm to convert ASCII in ATARI-Format to ASCII
in PC(IBM/DOS)-Format. Simple to use. German handbook by myself.
This file is also available to download on my sites (look down).
Thanks to me, Kai in Hamburg (Germany)

Tony Mattsson wrote:
>
> I recently bought an St, and I got a paper bag full of stuff with it. I figured them all out except this Synchro express box. The size is about that of a cigarette package and it fits into the Parallell port(the box has a male connector). There are one cord from it and that fits into the disk drive port(male) and a connector(female) which you can connect a disk drive.
> That is Disk in, Disk out and it connects to the Parallell port.
>
> What is it?

It's a disk copier. Needs it's program to work.
It'll copy just about any copy protected disk.

Mine worked great with a 520/1040 case, but the cable that connects
to the disk drive port wasn't long enough for my MSTE or TT.

4162. STacy for sale

Newsgroup: comp.sys.atari.st
Date: 1997-06-21 00:00:00 UTC
From: Craig <craig3p0@ix.netcom.com>
Message-ID: <33AC5582.5113@ix.netcom.com>
Source record: 120581

I am selling my STacy. The price is $500.00
The hard drive is new(less than 1 yr) Quantum 240meg.
It needs to be formatted properly. I can't seem to find the right
software.(When cleaning out my midi files I accidentally deleted the
desktop file) the drive has been low level formatted on IBM. It needs
an Atari format w/no parity. (It was working properly until I deleted
the desktop. The trackball and buttons work fine. The monitor is built
in. I am in a suburb of Los Angeles,California. It would be best to
sell it to someone nearby so they can come over and see it.
Email me if you're interested and we can set something up.
Thanks.
C.

4163. great monitor for Falcon FS

When I was trying to set up a connection, I did various things.

1. Used Connect (or another terminal program) to see exactly what messages my provider was giving me. In particular, I looked to see what prompt I was given after I had entered my password.

2. I had access to a Mac and to the configurations we were given for connecting using it. With a bit of effort (reading Free PPP Default in SimpleText) I found out that my provider wanted me to say "PPP default" (or "SLIP default"- not sure if these were upper case, though) in answer to its prompt.

3. For Stik, I found that the next message I got was "Your IP number is ..." and I put (as indicated in the sample Stik script) $GET_IP to be my response to the provider's "IP number is".

HTH.

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 06/21/97

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 5.50 Arkanoid (Taito)
$ 5.50 Art & Film Director (Epyx) -- $4 shipping, due to weight,
counts as 1st item
$ 4.50 Battleship (Epyx)
$ 2.50 Bobo (Infogrames / Terrific Software)
$ 4.50 California Games (Epyx)
$ 4.50 Championship Wrestling (Epyx)
$ 2.50 Crash Garrett (Metal Hurlant)
$ 4.50 Death Sword (Epyx)
$ 3.50 Devon Aire (Epyx)
$ 3.50 Dive Bomber (U.S. Gold / Epyx)
$ 2.50 Dragon Scape (Free Spirit)
$ 3.50 Final Assault (Epyx)
$ 4.50 GFL Football (Gamestar)
$ 3.50 Golden Path (Firebird)
$ 3.50 Goldrunner II (MicroDeal)
$ 4.50 Impossible Mission 2 (Epyx)
$ 4.50 Karateka (Br0derbund)
$ 3.50 Knight Orc (Rainbird)
$ 4.50 L.E.D. Storm (Capcom)
$ 3.50 Lands of Havoc (Antic Software)
$ 4.50 Last Duel (Capcom)
$ 4.50 Man Hunter: New York (Sierra)
$ 2.50 Mean 18 Famous Course Disk Volume II (Accolade)
$ 4.50 Metro Cross (U.S. Gold / Epyx)
$ 4.50 Paint Pro (Abacus Software)
$ 3.50 Prime TIme (First Row)
$ 4.50 Quadralien (Spinnaker)

$ 4.50 Renegade (Taito)
$ 4.50 Space Quest: Chapter I (Sierra)
$ 3.50 Star Quake (Terrific Software)
$ 3.50 Star Ray (Logotron)
$ 6.50 Star Wars (Br0derbund)
$ 3.50 Stunt Track Racer (Microplay)
$ 3.50 SwiftaR (Accustar)
$ 4.50 Techno Cop (U.S. Gold / Epyx)

$ 5.50 Warship (Strategic Simulations, Inc.)
$ 4.50 Winter Games (Epyx)
$ 4.50 World Games (Epyx)
$ 4.50 World Karate Championship (Epyx)
$ 3.50 Zero Gravity (MicroDeal)
$ 3.50 Zynaps (Hewson)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly
listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted (also, please check out my want lists,
since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your
order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address
(this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

4178. Batman game from Ocean/Data-East

Newsgroup: comp.sys.atari.st
Date: 1997-06-21 00:00:00 UTC
From: bill@eport.net
Message-ID: <bill-2106971041250001@flyers.eport.net>
Source record: 120675

Hello all!!

I'm desperately looking for an ST game called Batman: The Caped Crusader..
I believe Data-East published it, if not Ocean. Came out in about 89-90
maybe earlier... not based on any movies.

Is either Ocean or Data East online anywhere?? Any good ST resources I
can check for this?

Willing to pay cash!

Thanks.

Hi there both of you!

Goodmans PD library has a 'TOS changer' disk which includes TOS 1.0, 1.2, 1.4 and 1.62 as well as EOS 1.4.2 and KAOS 1.4.0 plus an AUTO program which allows you to choose which one to load from the diskette at boot-up. It _should_ be possible to hack this to include 2.06 as well, I would have thought. BTW, the disk that I have has the end of the INSTRUCT.DOC file missing - due to the fact that the original was formatted to 83 tracks (10 sectors) and the copier didn't copy over the last track (I don't think either of my drives could read it if it was there, either!). Hence I don't know the author, though he seems to have also written several STOSFIX versions.

Hi there!

I know nothing about Unix etc, but I think you'll find the ^Y problem is
due to your German keyboard, which has Y and Z transposed from the English
language ones! The program probably reads the scan-code rather than the
ASCII value. I have come across this quite often when translating German
programs, and have to alter ^Z to ^Y and vice versa. In one or two
instances this doesn't work because the program reads the shortcut from the
resource file but still reacts wrongly; then I have to choose another
letter entirely!

%My compliments!

Glad to hear it. Apparently something changed recently on my mailhost
so it was using an invalid From address. I've just fixed that tonight.
(It's good to be the superuser... }-)

I've just finished compiling Lynx 2.7.1 on my TT, going to rummage
thru there for any other interesting ideas to implement. For now, no
one has suggested any new features to add, so I guess everyone's happy.

I've also built zlib, the freeware compression library. Will probably
incorporate that, so we don't need to spawn the gzip binary. Lynx is
still using an HTTP 1.0 library, so I haven't gotten any new HTTP 1.1
ideas out of it. Oh well. (If you can't steal code outright, you can
at least try to steal ideas, eh? Came up empty this time 'round...)

Hi there!

Thanks for the reply, but no, this game was NOT based on the movie! It
game out about a year before the movie and the game for the movie! I was
hoping someone would remember it... it wasn't the one where you drive the
batmobile or use your batrope to climb or anything... it was kind of a
fighter platform time gime, but it was "3d" in that you could go in and
out of doors, and each room was set in a "comic book" type frame.

Help!

No, I don't think so. It can be installed on any drive you would
like, but you have to install it new from the original disk. It
checks for the paths then and eventualy asks you for them. Once
installed this can not be changed.

>SCSI ID should I have it set to and should the terminator be on or off? I

It's equal with id is set on your zip drive. You only have 5 OR 6
If that drive is the last or a single drive, you must set the terminator to 'ON'

Have a look:

```
Falcon Bus Harddrive Bus Zip ID= 5 or 6
#######-----------##########----###----###-T = Terminator 'ON'

Falcon Bus Zip ID= 5 or 6
#######----------###-T = Terminator 'ON'

W R O N G :
*********************************************************************

Falcon Bus Harddrive Bus Zip ID = 5 or 6
#######-----------##########-----------###- = Terminator 'OFF'

Falcon Bus Harddrive Bus Zip
#######-----------##########-T---------###-T = Terminator 'ON'

^
|
--- Terminator also 'ON'

Falcon Bus Zip ID 0 5 or 6
#######----------###- = Terminator 'OFF'
```

** You only have two correct examples on the top! **

>have unplugged the external 530M drive and only have the internal drive

You can use both devices as shown in the upper schematics.

>active (and the ZIP). I have formatted the disk (deleted the PC/Mac tools
>on it) and tested for bad sectors (just in case). I have AHDI 6.05c
>installed on drive C: as my boot software, but it isn't seeing the ZIP
>drive. Do I need different software installed to boot from, or am I
>missing something?

The last AHDI release is 6.06 (Falcon)

AHDI have a little bug..

If you connected some scsi devices to your falcon like that:

Falcon -> Drive ID0, Drive ID1, Drive ID2, Drive ID3, Drive ID4, Drive ID5, -> up to 7

AHDI will found ALL devices. And you have access to all devices.
That what you have build is a 'hole' in
that line like this:

Falcon-> Drive ID5 (or 6)

or

Falcon-> 540Meg (ID?) -> Zip ID 5 or 6

AHDI can't found devices out of a line with following IDs.
(I think that's your problem, so i hope i understand your mail well)

Have a look for a demo release of HDDriver 6.x
That driver makes a full scan for all devices over all id's
(And you got a driver how was support write protect zip disks / passwort option)

Regards, Robert

Hi!!

I am new to Atari ST so i was wondering if someone can help me out.
I have Atari 520STFM with built in floppy drive. I was trying to connect another external floppy to it but i do not know how. I have Atari SF354 drive and when i plug it in floppy drive "IN " or "OUT" connector on back of ST... nothing happens. When it boots on without external floppy drive than it shows me icons for drive A and Drive B but they are both reading internal floppy drive only.

When i plug in external drive to IN or OUT than nothing works. It will boot but it will not read any drives.

Heeelp!!!

There is only one floppy connector the ST, no "in" and "out". The floppy connector is the 14 pin DIN connector on the back... The only 'in' and 'out' connectors are the 5 pin MIDI ones on the left side of the ST. You're not confusing the two, are you ?

However, I don't see why the drive is not recognized when connected. Is the power correctly connected on the external drive ?

Hi there!

I'm just going to ask you some questions here, and I would like it if
you answered it back via e-mail (ie not to comp.sys.atari.st since I do
not read this group very often)

1 - Are you using your Atari for Internet?

If so, please answer the rest of these questions, if the answer is NO
then please do not send me anything. (Magic-mac or MagicPC is allowed,
but not Linux)

2 - What TCP/IP Stack are you using?
STiK, STiNG, MintNet, NOS, etc.

3 - What Internet Programs do you use most of the times on the net.
CAB, IRC, Telnet, Newsie, etc.

4 - What Internet-Software are you missing?

5 - your Hardware (Falcon, ST, etc, Memory, Disk/HD, etc)

Thank you in advance.

BTW I'll make some Summary and put it on my web-space when I start
recieving some answers (when that page is up, I'll post here)
/Chris.

>not confusing the two, are you ?

Nick,I have a SF354 Drive lying around doing nothing at the
moment,it does have an IN and OUT and a Power connector on the rear.
I was told of a way to make it work or to get the STE to recognise
it as an exterior 2nd Drive but lost the details.

Sorry cant help anymore.

I'll second that about Alex at ATY. I just asked him about the Nemesis,
and he said he would be getting some in shortly. He estimated it would
cost around $200 for the Nemesis and installation.. though, he stressed,
that's just an estimate until he actually gets 'em in.

He installed my Falcon audio mods and clock buffer fix, and he knows
what he's doing.

Cattamaran which is a clock doubler IIRC. It may still be
available from System Solutions, or the developer, Cybercube? in
Canada. You may find their email, or link, on Hallvard's site.

The people who developed PowerUp2 for the Falcon were working on
something similar, I'm not sure if it made it to the market though.

4231. Substation for sale

Newsgroup: comp.sys.atari.st
Date: 1997-06-23 00:00:00 UTC
From: "Mark W. Herber" <MARKH@CTSS.com>
Message-ID: <01bc802e$42f5fec0$7ec2d8cc@datel451.cts.com>
Source record: 120495

Substation for sale: $20 plus shipping via UPS COD

This includes the original disks, box and manual.

Also includes my copies of the disks with all my saves at the end of each level. Original and copied disks run perfectly.

Also included are October, November and December issues of ST format. These three issues have the maps for all twelve Substation levels. Each magazine includes the disk that came with it. On one is Subtrainer, an official cheat program written by Unique Developements (the Substation people). It allows you to load up on extra ammo, health, skip levels, etc. Of course the magazine disks have other things you might find useful or interesting.

According to the box, this program runs on the STE or Falcon. But it runs just fine on my MegaSTE with TOS 2.06.

Requirements: 1 Meg memory.
A color monitor. SC1224 or VGA. This is a 50Hz european game.
There is no getting around the fact that you will need a
color monitor for this game. A TV won't work.
One floppy disk drive. (minimum requirement)
OR 2 floppy drives
(better since it will save you a lot of disk swapping. This is what I have.)
(this game reloads each time it restarts)
OR it's hard drive installable
I recomment a good home stereo. Then you can hook the computer up and play it loud. Sounds real good.

For those who don't know, Substation was the only DOOM style game ever made for Atari. I now have a lose95 system. I'm half way through DOOM and the hairiest thing I've played is still level 9 on substation. DOOM has rooms that have no light. All of level 9 is like that. That was tough.

4232. HELP Atari Tos

Newsgroup: comp.sys.atari.st
Date: 1997-06-23 00:00:00 UTC
From: darkwing@ica.net
Message-ID: <33AF1BA4.255F@ica.net>
Source record: 120496

I was wondering if someone can make me a copy of TOS for my 520STFM.
When i got it on computer show aparently GENTLEMAN that sold it to me
did not give me a TOS disk. As it looks like it is either to get that
disk or throw this thing in garbage.I have been frustrated enough.
In the manual it says that i should make a backup of that disk in case i
loose original......duh.

For now it only boots in showing me two drives and trash can. The way it
looks it will end up in same since i only paid $20.00 for system and
monitor.

I am on the end of rope with this thing so any help would be appreciated
from you Atari pros. by the way i also have one external drive with it
that is not working when connected and it is screwing things up.

4233. Converting files from Atari 1040st disks to a format readable by IBM machines

4237. Kelstar Atari User Group - Darlington

Newsgroup: comp.sys.atari.st
Date: 1997-06-23 00:00:00 UTC
From: hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <1771_hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 120620

From: John Thompson 16th June 1997
30 East Raby Street
Darlington
County Durham
DL3 7TJ

Tel: 01325 286319

First off, let me introduce myself. I have just taken over the running of the provisionally-named Kelstar Atari User Group from Bob Kell, which has been going since around February 1997. The take-over was a completely amicable affair, as Bob stated that he was only going to get the club up & running, then let someone else take it on. Well it seems that someone was me!

Bob has talked before about registering with your organisation, the UKAAUG, but I believe he never got around to it during his stint as editor, so it is now up to me.

Could you send me details of how I register this user group with the nationwide register you run? What would I need to send you? Are there any fees invilved, either initial, ongoing or any administration costs? What benefits would the club gain from joining the UKAAUG, both nationally and internationally? Do you have any comments from other User Groups about their experiences after registering? Any information along these lines would be very helpful. Would you mind if any information I received from you was published on the User Group disk, for the members to read, and possibly comment on?

Your help in these matters would be greatly appreciated.

On another note, would you agree to be interviewed for an issue of the ST Highway diskmag? The interview would take the form of an ASCII file consisting of approximately 10 questions, which I've been told look deceptively simple! The questions aren't the usual "What's your favourite program?" style of question. I have done a couple previously, and each time the questions are relevant only to that person being interviewed. Previous "victims" include dave Hollis (ST+ diskmag), Chris Holland (Maggie) and Bob Kell. Please let me know.

I look forward to your reply.

John Thompson
Editor\Organiser\Dogsbody etc, The Kelstar Atari Users Group

Yes, it is a nice tool. I've written a patch that will translate most
of the text and menus into English. It should be showing up on
'ftp://ftp.ibp.fr/pub/atari/ ' any day now, or you can also download it
from my web page 'http://people.delphi.com/~innovator/ '. It's called
TRNSLT12.ZIP .

If the ZIP is the last drive in the SCSI chain it has to be terminated.
The SCSI ID you choose doesn't matter.

> drive. Do I need different software installed to boot from, or am I
> missing something?

You ca use AHDI but if you want to use the special read/write protection
features of the ZIP and if you'd like to have higher transfer speeds you
should have a look at the demo version of HDDRIVER:

Plain midifiles (type 0 and 1) should be standard, whatever the computer you
are working on. Maybe the problem you are having is transferring disks. An ST
should read and write PC formatted 720K disks without much problem.

For the emulator, try pacifist. You'll need an image of the TOS rom.

Check out the addresses that are in the Quick FAQ (see my .sig)

No way! The codes must be transmitted correctly, because when I quote
characters in the vim editor they are printed correctly. Besides, the C-key of
the German keyboard is at the same position as the C-key of the US/UK keyboard.
The only yhing that worries me is that the special process control meaning of
some of these keys is not recognized.

>The program probably reads the scan-code rather than the
>ASCII value. I have come across this quite often when translating German
>programs, and have to alter ^Z to ^Y and vice versa.

That may be the case with some programs, but the programs I'm talking about are
mostly Unix ports that don't bother with scancodes but read the characters
transmitted via streams/ports.

Oh, sorry, I though he was talking about connectors on the ST, not on the
drive.

>loose original......duh.

TOS is the operating system. On an STFM it's in ROM. There are no TOS disks
ST except the very first ones. There were 'language disks' but they were not
very good anyway. You can get better stuff these days on the net.

>For now it only boots in showing me two drives and trash can. The way it
>looks it will end up in same since i only paid $20.00 for system and
>monitor.

Err... That's the normal GEM desktop, there's nothing more to it. From the
desktop you run software, copy/delete files, etc, anything you can do from a
DOS prompt. What more do you want ? Everything is mouse operated.

If it's programs you're after, you can get a lot from atari FTP sites, and the
web. Just unzip them on a PC or whatever else you're using and put them on
720K DD DOS formatted disks (assuming your ST has a double sided drive).

Maybe you should take a look at the Quick FAQ (and other FAQs), the address is
in my .sig.

>
>I am on the end of rope with this thing so any help would be appreciated

>that is not working when connected and it is screwing things up.

Well, you can do without the external drive for a beginning. It isn't really
needed, it just makes things more comfortable.

Don't give up!

4251. Are pipes and Pause key combinations possible (TOS)?

Newsgroup: comp.sys.atari.st
Date: 1997-06-24 00:00:00 UTC
From: Guentcho Skordev <ut13@ab292.rz.uni-karlsruhe.de>
Message-ID: <5oo4kl$jt4$1@nz12.rz.uni-karlsruhe.de>
Source record: 120505

Hello !
Sorry for posting the message once again, but I decided the title was not very good.
--- Original message:
I have a Mega ST 2, and i have some compressed files in different formats. I have also some TOS programs to uncompress them (e.g. gzip, zoo etc.). I have also a TOS version of "less".

1. Is it possible to redirect the output on a ST (i mean something like Unix and DOS pipes). It would be fine to read some texts without writing and deleting them manually.

1a. Is it possible to stop the output (as with the "Pause" key on the PC)?

2. I've tryed a trick from the FAQ - starting an application from an inactive window, but it says "... kann das angesprochene Objekt nicht finden" or something similar.

3. Is it possible to install a screen font and to see it also in the TOS output?

Thanks in advance
Guentcho

Hi,

Some time ago, I posted a message on this subject, and I have got only one (unusable!) answer...

I would like to ask again. Among you, Atarians, who is using SpeedoGDOS with a Stylus 820 (or compatible) printer? I just need to know which Speedo driver is being used. (I have two, they don't work).

I couldn't believe I am the only one with such a configuration. Please, I really need information.

Thank you in advance.

Roland

Maybe shooting in the dark here, but you do know an external drive
requires it's own power supply?

The out port on the computer should hook to the in port on the drive.

Not trying to start any flames or anything, but sometimes the simple
things are overlooked.

Umm...what was the original problem here? I must have missed the first
part of the message. (Darn server!) Anyways, the ST itself does only have
1 floppy connection and both the SF314 and SF354 have pass-throughs so
that you can chain them, but only on a 520ST. For example you can hook up
2 external drives on the 520ST (not fm) but only one on a 1040 or any fm.
model...Once an external floppy is hooked up (correctly) then the system
automatically recognzies it-there is nothing else to do-one of the most
common errors is getting your "ins" and "outs" reversed...! Hope this
helps some...! :)

The drive cable goes to the "IN" connector on the external drive. It also
requires its own power supply, and to be turned on before booting. The SF
354 is only single-sided, by the way, unless it's been modified. The
internal drives on 520 STfm's were mostly single-sided also. (that means
you use standard double sided, double-density NOT High Density diskettes,
but you only get the use of one side of the diskette, for 360K of data)

> a way (simple) to overcome this problem?

Circuits to combine syncs and video are sometimes published in
Electronics magazines, eg. the July/August 97 UK issue of Elektor has a
circuit which could be adapted. BTW it's more common for the syncs
to be combined with green.

Suggest you check that it has analogue inputs before parting with any
cash. You should also check which scanning frequencies it syncs to.

Some graphics monitors have a single sync frequency which is higher
than the Falcon can provide.

SVGA monitors don't normally require a Targa card.

Good luck Barry barry@cix.co.uk

It's ICTARI time again !

Get thee to:

http://www.elis.demon.co.uk/ictari/ictari.htm

and have a read of ICTARI 47.

Those of you who've been reading up on OLGA and the like in
Atari Computing will be intesested in the huge chunk of GEM
documentation in ST-Guide format. As for next month, I don't
know.... Send me something ?

Have Fun,

Giles.

From: Craig <craig3p0@ix.netcom.com>
Message-ID: <33B08BAF.4183@ix.netcom.com>
Source record: 120532

I just had my Atari STacy repaired.
The service guy is named Chazz. He did a great job and is very
reasonable. He is located in Hollywood,California.
Phone # 213-466-2307. He does not do mail ins**locals only.
I was very relieved to find someone in the area who does Atari repair!
If you are in driving distance of Hollywood and need Atari service-
you're in luck!!!
Chazz also buys broken stuff 1040's monitors for parts. If you have
any, give him a call and recycle! (That's the only way to keep the Atari
world going!)
Anyway I thought everyone should know (considering the difficult time
I had trying to find someone to fix my stacy!
thanks.

: I would like to ask again. Among you, Atarians, who is using SpeedoGDOS with
: a Stylus 820 (or compatible) printer? I just need to know which Speedo driver
: is being used. (I have two, they don't work).

: I couldn't believe I am the only one with such a configuration. Please, I really
: need information.

Unfortunately, I cannot help you with that as I use a Stylus. However, in hopes of assisting you in some way, I can make a recommendation - NVDI 4 comes with MAKEPRN, a program that allows you to create a driver for any printer, as long as you have the codes for it, of which I know that Epson lists all appropriate codes for your printer in your manual. It's a little irritating for you to have to do perhaps, but that way, you can have a Stylus 820 printer driver.
Plus, NVDI is a great program, and well worth your attention and usage.

Leslie

If you have a machine that you can connect to from the Portfolio via a serial link, then the best way would probably be to log into that machine from the Portfolio and do your email that way. I doubt that self-contained software supporting, perhaps, SMTP and TCP/IP would be practical on the Portfolio. If someone else knows better, however, I would be pleased to hear about it.

Message-ID: <33AFFC02.2DB9@facstaff.wisc.edu>
Source record: 120536

Don't despair, friend! From your description, you've already got TOS in the ROM chips in your STFM. Only the earliest STs (before the STFM, I believe) had TOS on disk. The only thing you're missing without the disk are a few utilities (control panel/clock setter, VT52 emulator, and setup for modem and printer ports). There are better utilities that do these things available from several places on the net.

If your machine has one internal floppy drive (which it should if it's an STFM) or one internal and one external floppy, I'd expect it to boot just as you've described with no diskette in the floppy. You may not be able to do much with it right now, but there's plenty of material out there to make your $20 purchase quite worthwhile.

I'd recommend a visit to one of Hallvard Tangeraas' sites listed below to get started on building up your ST software (and information) library! Good luck!

-ST FTP site list: <ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt>
-Atari ST FTP access : <http://home.sn.no/~hallvart/pages/atari_ftp.html>
-Atari ST WWW section : <http://home.sn.no/~hallvart/pages/atari.html>
-Atari ST essentials : <ftp://ftp.sn.no/user/hallvart/atari/>

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST. I am also open to trade offers.
E-mail me your list.

HARDWARE

Atari Mega 1 Computer. This was not released in the U.S.
Same as a Mega 2 or Mega 4 execpt it has 1 Meg of RAM.
German TOS 1.2, German Keyboard. Has U.S. 110v power supply
installed. With German manual and mouse. $100.00

Atari SF354 SS External Floppy Drive. Comes with power supply and
cable to connect to ST. Unit is in perfect working condidtion
but a little loud. Packed in original box. $10.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $65.00

Supra 2400 baud external modem. No power supply. $5.00

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $1.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

S.D.I. by Mindscape. Complete with box, docs, and disks. $10.00

BOOKS $5.00 each unless noted

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00
Thunder! The Writers Assistant manual. $3.00

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

4288. Atari stuff for sale (update)

Newsgroup: comp.sys.atari.st
Date: 1997-06-25 00:00:00 UTC
From: Sherri Cross <scross@tir.com>
Message-ID: <01bc8110$a04b98e0$LocalHost@scross>
Source record: 120542

Here are a few more items I've turned up in my attic. As usual, any reasonable offer accepted.

IB Drive. This is a 5 1/4" drive for use if you are running IBM software on your ST. Good idea at the time, but not sure if it's practicle now that everything is on 3 1/2.

MIDI networking adapters. Can't remember the name of these. They plug into your MIDI port, and you run a standard phone cord between interfaces. Lets you network computers. I have 2 of these.

I also have a set of differant MIDI networking adapters. I think those were called SGNet. Anyway, if anyone is interested in networking their ST's I can get you more info. Need to dig out the docs for these.

I have a couple of 520's, one is dead. The other works, don't know if it's been upgraded or not. Anyone have a simple program that checks out memory and other enhancements?

I also have two 1040stf's that can be used for parts. On one when you turn it on you get a funky screen with lots of color bars. Not sure, sounds like a bad chip. don't know where to take it to get fixed, and wouldn't want to spend the $50 anyway. Someone out there who knows how to repair Atari's interested in this one?
The other computer came from a guy who loved to play around in the guts. He purchased a PC Ditto card, and figured that he could install it inside the computer if he took out the power supply. So he removed it and put it into an external case. He installed some sort of funky memory upgrade and replaced the TOS chips. He has since removed the PC-Ditto because it never worked right. The computer worked for me about 3 days before quitting. A friend looked at at and figured it was the memory upgrade, but since we didn't nave any info on it he couldn't fix it.

I have a couple of under-monitor power stations. Those are the gadgets that you plug all your computer stuff into, and has the on/off switches on the front for easy access.

I also found an old gadget that is next to worthless now, but at the time was a "poor-man's scanner". First, plug in the cartridge, then plug in a special fiber-optic wire and run it to your dot-matrix printer (worked great on my Panasonic 1080). You put the wire right on the print head. As the head goes back and forth, it scans a line. The page then moves up a fraction and it scans again. Yeah, I know. Dumb idea that would only be of interest to a gadget freak. So I got one. Works ok but when I got my hand scanner it got pitched into a box and stayed there.

Found a couple of clock cards that plug into the cartridge port. Probably will need bateries, no idea if they work. Still looking for the software.

Also found a couple sound digitizer carts and a video digitizer (Rombo) and I found the color software for it!

I have a lot of books on the ST. Will have a list but if anyone wants the whole box maybe we can deal.

That's it for now. All day in a 90 degree garage wasted me.

4289. Graphics cards

Newsgroup: comp.sys.atari.st
Date: 1997-06-25 00:00:00 UTC

Message-ID: <01bc8119$b396c7e0$45ab92cf@isjeuzjk>
Source record: 120545

Iomega Zip is great, but why not just get an Iomega Jaz drive instead. I have both (connected to a PC - but don't shoot me for that) and I love the Jaz. Big, fast, reliable.

No, I don't work for Iomega. I work for IBM

4292. CD Rom recorder software?

Newsgroup: comp.sys.atari.st
Date: 1997-06-25 00:00:00 UTC
From: mgrove@owens.ridgecrest.ca.us
Message-ID: <5oqglt$jk4$1@ash.ridgecrest.ca.us>
Source record: 120546

Is anybody aware of a CD Rom recorder package being worked on other than the $300.00 one currently available?:).
Roger (Extendos) stated he might be interested when he completes his current project, but wasn't sure what the market would allow cost wise. I would probably go up to $150.00 just to be able to burn a disk on the Falcon, but with drivers for Mac and PC included with the drives, it's hard to justify the cost for the currently available packages.

Maybe HD Driver 7 will include this feature:).

Mike

Take a look at the Quick FAQ (see .sig) where this is all explained in detail.

Basically if it's an STE it will take simm memory (30pin, 1Mb), otherwise
you'll need a memory expansion card.

For a hard disk, it must be either an external SCSI drive with a DMA/SCSI host
adapter, or an internal IDE with a special IDE card (and a PC desktop case if
you want to mount a 3.5" drive).

If wordwriter can export plain text (ASCII), then at least you won't be
retyping anything, but you'll lose all the formatting.

You could try Marcel on the ST which is a freeware WP that can read/write many
formats (not sure about wordwriter), and can export RTF.

That's for the conversion. To physically transfer the files from the ST to the
PC, just use a 720K disk formatted on the PC.

: Does anybody have any tips for getting started on Frontier (Elite II).
: It seems to me like it will take ages before I earn enough credits to
: buy any equipment. The other option is to deal in illegal goods, but the
: random fines tend to balance any extra credits I make.

First, there is at least one saved game editor that lets you get almost anything you want in the game, even ships that couldn't really exist (e.g. I have an Eagle MK III with something like 30000 tons cargo space, 8 missile pilons, plasma lasers (or whatever they are, a while since I played it) on all four turrets, 150light year hyperspace range, 400 shield generators etc.) You can also get any number of credits, ship expansions etc., even change the id number on your ship.

Another cheat (that requires no special software) is to load up all your cargo space with water, hyperspace to some uninhabited system (so you don't get fined) and then jettison the water. Each time you jettison a load of water, your cargo space increases, so by doing this a few times you can end up with a huge cargo space. This means that you can trade large amounts of good at once, and make much higher profits. This isn't as good as using the level editor though.

If you want to do it without cheating, then you just have to trade, trade, and keep trading until you build up enough credits. There are a few good routes to know though, and certain places where you can make rediculously high profits. See the recent couple of AtariPhile (an online magazine) issues for more hints in this regard.

While trading seems tedious at first, once you get past a certain point in cargo capacity you find that you can trade so much goods at once that you can make almost as much money as you want. With such a big ship (like the Panther clipper IIRC) you can have heaps of shield generators and hull auto repair system, as well as a high powered laser. This means that you never can be killed by pirates - just ram them or shoot them, they don't have a chance. These big ships are no good for military missions or such, though, because they are so slow (even with the best class 8 hyperdrive). So depending what sort of things you want to do in the game, a more moderately sized ship may be better.

In the end, I found it easier to use the save game editor, because the standard ships are either too small or too slow, even the best ships in the game. You might want to play the game a while first though, in case you find cheating spoils it for you. I actually found that it made the game much better though, having a really good ship this way.

So there you are, I hope that was of some help.

BTW, one of the items that you can get in the save game editor is "fighter launch device". But what does it do? Has it got something to do with this mysterious super-ship that supposedly exists at the edge of explored space, as mentioned in the recent AtariPhile magazine? Can anyone shed further light on this?

And I'm not exactly sure what pipes are. Are you trying to read text files
from the desktop? Or is your text viewer just scrolling down the screen,
faster that humanly possible to read? If yes, get GUCK18, the desktop file
viewer.

If you can't read the messages that a program flashes on the screen when
it exits, then some sort of shell like Hotwire will let you read the
messages.

And I'm not exactly sure what pipes are. Are you trying to read text files
from the desktop? Or is your text viewer just scrolling down the screen,
faster that humanly possible to read? If yes, get GUCK18, the desktop file
viewer.

If you can't read the messages that a program flashes on the screen when
it exits, then some sort of shell like Hotwire will let you read the
messages.

A unix-like shell will allow redirection and piping up to a point. Under
MiNT it will allow you redirection, job control, the whole works.

> 2. I've tryed a trick from the FAQ - starting an application from an
> inactive window, but it says "... kann das angesprochene Objekt nicht

Sorry, I don't speak German :-)

Hey, I don't even understand "inactive window" ...

> 3. Is it possible to install a screen font and to see it also in the TOS
> output?

GDOS?? NVDI??? SpeedoGDOS????

Not if he means character mode output to the screen, as in what a .ttp or
.tos program normally produces. In that case he'll need a utility that
installs a replacement system font. They do exist (I've even got one
somewhere ...)

Now where were we? Guentcho wants to view compressed text files without creating an uncompressed file on disk. If he installs a shell such as mupfel then
% gunzip textfile.gz | less
should work. I think it will actually create a temporary file and delete it afterwards, which may be a problem if he is short of disk space.

Guentcho could also install MiNT and have it start up a 'real' shell (e.g. sh) as an INIT program; this will feel very much like running unix on a VT52.

(BTW I'm assuming Guentcho is male, it's not a name I've heard before).

I am using a Nova card with my MegaSTE and it works fine.

>An suggestions as to what sort of monitor would be best suited for such
>graphics cards would be most welcome.
Any VGA monitor will work. The Nova comes with a utility program called a "resolution generator" which allows to run the card in any resolution/frequencies you want, to fit your monitor (within Nova capabilities of course!). This program is not easy to adjust, but there is a large library of monitors that you may either use directly or modify at will.

The version I have has a 1MB video memory. Taking into account that it needs 4 bits for 16 colors, 8 bits for 256 colors, 16 bits for high color and 24 bits for true color, it is easy to calculate the maximum theoretical resolution that you can obtain for a given number of colors. I use routinely 1024x768 in 256 colors, however 1152x864 works also, for example. I think there is a newer version for the MegaSTE, with 2MB video ram. This one would do 1152x864 in high color...

Hope this helps.

Roland

No (cite from the man-page):

--
NAME
less - opposite of more
--

grin

But to explain it a bit: less is a powerful replacement for more, which
allows a lot of nice things, i.e. scroll backward line by line, search
with highlightning the found text, and a lot more.

> A unix-like shell will allow redirection and piping up to a point. Under
> MiNT it will allow you redirection, job control, the whole works.
Piping is also possible with plain TOS, if the shell uses temporary files
for each "stage" of the pipe. Input/output redirection is also possible.
But of course, there's no job control with plain TOS ;)

And yes, there's an equivalent for the "Stop" key of PC keyboards: Ctrl-S
to stop output, and Ctrl-Q to continue (this is also known as "flow
control").

> > 2. I've tryed a trick from the FAQ - starting an application from an
> > inactive window, but it says "... kann das angesprochene Objekt nicht
> > finden" or something similar.
> Sorry, I don't speak German :-)
> Hey, I don't even understand "inactive window" ...
A window not being on top. I think the problem is that the original
author is using TOS 1.02, which can't deal with applications run from
within an untopped window (or better: the built-in desktop can't run them
correctly). This may still be the case in TOS 1.04 and higher, but at
least TOS 3.x and 4.x should be able to handle it. And of course, all(?)
alternative desktops allow this without problems.

Insert a -c here.

> should work. I think it will actually create a temporary file and delete
> it afterwards, which may be a problem if he is short of disk space.
Yes, but as mentioned above, it's the only way to do it with plain TOS.

Ciao

You don't need to - it's on a ROM inside the computer.

> For now it only boots in showing me two drives and trash can.

That's exactly how it should look! Put a blank double density disk
into the drive, and go to File/Format floppy disk (or something), and
format it. Then put some software on the disk and that's it. I can
send you the basic Control Panel software etc by email if you want.

> by the way i also have one external drive with it

You have written exactly the same thing in:

Date: Mon, 23 Jun 1997 19:57:07 GMT
Message-ID: <33b3d20c.3325766@news.demon.co.uk>

And 2 days before in:

Date: Sat, 21 Jun 1997 20:34:43 GMT
Message-ID: <33ae3a42.530332@news.demon.co.uk>

And 2 more days before in:

Date: Thu, 19 Jun 1997 17:35:48 GMT
Message-ID: <33b06d4f.165640@news.demon.co.uk>

And also 2 days before, etc... Don't you think it's enough? In my
humble opinion such an advert can be posted once, then repeaded say one
month later (as most newsservers expire news after 3 or 4 weeks) but only
once. If you can't sale your goods after two ads, your prices are perhaps
too high.

Bye. Bruno.

Only the STE models have easily upgradable store via SIMM. The simplest ST upgrade is by using the Frontier or Marpet extension boards which DO take SIMMs. You may find these advertised second-hand in this area.

dn> Also he may
dn> require a hard disc how easy is it to upgrade and which type of
dn> interface does it use .

The ST has a DMA interface which is close to SCSI but not close enough!

You need a host adapter which interfaces DMA to SCSI and a SCSI drive and power supply (5v, 12v). The HD utilities and driver are available FREE on the net.

There are ready-packaged "shoe-box" hard disc upgrades. You should find these, too, second-hand.

I'd probably go to about 75 ukp for a suitable package. Any higher than
that, and it would be cheaper to buy a CD-R for one of my PC-owning mates,
and just go round to his place if I need to burn one.

Similar story with flatbed scanners, the drivers cost almost as much as
complete packages for the PC. I know it's all to do with economies of
scale, and I want Atari programmers to get a good return, but it's an
unequal battle. Time will come when Shareware will replace Commercial to a
large degree I think.

He must not have paid his shareware fee ;-)

Actually there is nothing I know of that would limit offline mails,
except if the OUTBOX is nearly full, say 98 message, and he decided to
queue more than 2, in which case any more would not be read into the
buffer when the mail was checked...

1. Works OK with Falcon,
2. 4 full size exposed bays, the lids are detachable (it has the 4 lids),
3. Internal ribbon cable with 4 SCSI 50 pin connectors.
4. 230 Watts power supply (110/220V),
5. 2 additional internal fans,
6. External SCSI ID selector for each one of the drives.
7. Resistor built in (starts the power supply even if the load is small),
8. Case color: cream. AC power cable, good condition, LED on indicator.
9. Two 50 pin SCSI centronics connectors (IN/OUT).
10. All you need is a 50 pin Centronics to SCSI 2 cable. (Falcon)

$80 obo.

Hard disk case for Atari: PLUS IMPULSE SUPRA

1. DMA in/out connectors.
2. The case will hold 2 physical SCSI units.
3. Slender design will fit OK under monitor.
4. Will ship with latest utilities on a 720K disk.
5. Color: cream
6. Includes DMA cable and power supply cable.
7. 3 indicator leds at the front.

$50 obo

I also have an SH204 (Atari) ST hard disk $70.

Buyer pays shipping. Send COD. Phil.

AM> one that might increase my screen resolution. An suggestions as to
AM> what sort of monitor would be best suited for such graphics cards
AM> would be most welcome.

You need a VME graphics card, such as one of the Matrix, Crazy Dots or Nova boards. They each come with their own screen driver software, but the general recommendation is to use the NVDI special versions (either Matgraph or ET4000 versions).

System Solutions will have graphics cards of good quality but probably expensive. The last I heard Nick Harlow at 16-32 also had several Nova boards available at more reasonable prices.

You'll also *have to* get a VGA or (ideally) SVGA monitor to view the output (ST monitors cannot work with graphics cards), so that's a significant additional cost.

We are talking hundreds of pounds to go thsi route and you'll need to be aware that there are many compatibility issues with graphics cards due to the insistence of some software on expecting standard ST resolutions.

For example you can forget *ALL* games bar one that I can think of...

From: Darren Emmett

The Bay Atari Group

I'm proposing a meeting on 20th July at about 1pm till 3pm approx, the venue has yet to be confirmed although it will be in Torrisholme near Lancaster and Morecambe (Hopefully). Anyone expressing an interest in coming along let me know and if you want to show off your Atari system then I need to know in advance.

I will place an advert in the local papers and try to gain some more advertising elsewhere, the initial response to the setting up of TBAG was poor so I don't know how many will crawl out from under their rocks ;)

I will have two Jaguars showing off the CD and playing DOOM any other help is welcomed! Especially as my main machine is at TUS getting salvaged :((((The emphasis on the first meeting will be contacts and how to expand a system to get the most from it.

Darren

The only software of this kind I know is the CDRECORDER package
distributed by SoundPool (at least here in Germany).

> Maybe HD Driver 7 will include this feature:).

:-) Definitely not. But it will be easier to write such software with
HDDRIVER 7 because the new version (intended to be released next month)
will support a generic SCSI interface (SCSIDRV). This way you can send
SCSI commands to any kind of SCSI device.

4334. Mac or PC? I want 250 MHZ Falcon!

Newsgroup: comp.sys.atari.st
Date: 1997-06-26 00:00:00 UTC
From: kodogr@typhoon.xnet.com
Message-ID: <5ot47o$g5i@flood.xnet.com>
Source record: 120440

My Mac has been giving me several problems as of late. This has demonstrated to me the fundamental flaw of the the Macs philosphy of Hidden Behaviour-itus. I know that Apple is a sinking ship. My heart was never in Apple. I want to sell this thing, but I wonder if I can get even $800 for it now. Pretty sad because just a year and a half ago I put maybe $2500 into this damned thing.

And, it looks like Raphosdy is going to be a joke. Take housepaint and cottage cheese and place them in a blender and set for liquify. Mixing Unix and MacOS is like mixing DNA types of beings from separate solar systems. I just don't see how this thing is going to be both compatable and stable.

Still, PCs give me the chills, and I don't mean chills of pleasure. They scare the bejesus out of me. They seem to me to be claptrap and cludgey, the result of patching new ontop of old. Doesn't it take like 10 times the brain power to keep one of these things working than it does to keep a Falcon working? Ok, I admit it, I'm not intelligent enough to keep a PC happy. There, I feel better now.

So, maybe I want to sell my Mac and buy a Falcon and stick a Nemisis in it. Well, what I'm thinking is that maybe I'll get a PC and a Falcon too. I can use the Falcon as a backup for *WHEN* my PC decides to blow chunks.

Lets face it. Computers are still in there Ford Model T stages of development. How long have cars been around? 100 years. How long have home computers been around? 20 years. What's easier to use? Heh?

Thus, I'm going to have to monkey with it anyway. I want something that does not have Hidden Behaviour-itus.

I don't know it for sure, but I'm afraid that Windose95 may have copied the Mac again, but in the wrong way. They may have gone the route of Hidden-Behaviour-itus. If I load Windose95 on my machine will I still be able to use all of those Auto Exec Bat WIN files for tinkering or are there now Hidden Thingys that would take a big fat C++ compiler to change? I don't want this thing to half way work like my mac does.

Anyway, what if MacOS and Unix and WindozeXX keep sleeping together and having bastard children and those bastard children grow up into hideous monsters and then the children sleep with each other and have children which are even more hideous and so on? By the time I am too old to Fuck will it take 64terrabytes of internal cashe to just cut the cheese? Will the chip in my computer be the size of a hotplate and be hot enough to double as one also? Would I be wise to move to India and become a yogi?

Is there any hope? Will the human race really destroy itself within the next 100 years?

Kodogr ":^(
Unhappy With The Route The Home Computer Has Taken.

Hi!

In article <33b06088.6024613@news.wavetech.net>,
look@my.sig (Callum Lerwick) writes:
>>But to explain it a bit: less is a powerful replacement for more, which
>>allows a lot of nice things, i.e. scroll backward line by line, search
>>with highlightning the found text, and a lot more.
> So less is more? :)
less is more than more ... The standard version of more you get on a Unix
box is quite restricted, and so are the direct ports. But a lot of clones
are also called "more" (e.g. the pager found in the Gemini distribution),
though they are more or less like less ;)

Ciao

Thomas

> [Gemini]
> I believe you can run it fromthe AUTO folder, totally replacing TOS'
> desktop.
No! Gemini is a GEM application and therefore needs the AES to be active
- which is not the case during execution of auto folder programs. You can
of course install Gemini as an auto-boot application for the Atari
Desktop, but that's not what Phil is looking for.

But Gemini also includes a .ttp-version of the built-in CLI, the
"Mupfel". Rename this to mupfel.prg and you can put it into the
auto-folder. You may need a special profile to enable the blinking
cursor, though.

> I'm using version 1.999 -it's the latest version I think; someone correct
> me if I'm wrong and there's an English version around.
The latest official version is 1.a (hexadecimal counting!). And as far as
I know there's an English version, but it's only available for people who
register via Danny Bhabuta's shareware support scheme (at least that's
how I understand "Register for English version" on Danny's support pages).

Ciao

Thomas

So it looks like your using a PC?....Use netscape and go to the
following url..

http://www.mirc.co.uk

you can download the latest irc software from there, run it :).. and
you will be presented with a licence agreement..everytime you use it,

next window to auto pop up lets you fill in your name, email etc and
nick... nick is the name you will be known as on irc.. benny maybe:)

next you have a list if irc servers to connect to... this bits
important.. they dont all serve the same channels?.. as you are in the
uk then choose either of these

ircnet.demon.co.uk
stork.doc.ic.ac.uk

they are the usuals.. the ports and everything are preset...

youwill get on irc.. once there and you have seen a welcome message,
type

\join #atari

theres usualy a dozen or more people from all over the world there
every evening...all talking atar...but BE CAREFULL It's very addictive

Message-ID: <867327444.13699@dejanews.com>
Source record: 120448
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tec

Hi All,

On my Falcon I currently have MiNT v1.12, MiNTOS and MiNTNET
installed. The memory on my Falcon is a bit tight as it onlt
has 4Meg of RAM. Until I get around to buying more memory I
thought I would install MiNT 1.14 as this offers virtual mempory.
The problem is that if I replace MiNT 1.12 with 1.14 when MiNT
runs init a continuous message appears on the screen:

init: Acess Denied.

Does anyone know why it is doing this and perhaps how to fix
the problem.

Thanks.

Ben Hills.

4343. SCSI on a TT

Newsgroup: comp.sys.atari.st
Date: 1997-06-26 00:00:00 UTC
From: mlake@melake.erols.com
Message-ID: <slrn5r49k9.2ks.mlake@melake.erols.com>
Source record: 120449

I have been having problems with SCSI devices attached to my TT via the SCSI port and I'm looking for any help or advice that anyone can give me.

I have a Exabyte tape drive attached. Whenever I write a file to the drive I don't get any errors. But when I try to read the file from the tape drive that I just wrote I get read errors in the exact same place every time. This is the second tape drive I've used and I've tried mutiple tapes with the same results. I've also attached a Mustek scanner to the SCSI port on the TT which I've had nothing but trouble with. Whether it's the scanner, the driver software, or something I'm doing wrong I do not know. I have an internal SCSI Conner 1 GB HD which works fine.

I'm led to believe that the SCSI port on the TT is bad. Can I easily test the reliability of the port? Would a hardware dummy like myself be able to swap the port out? Are there other things besides a bad SCSI port which could account for my problems?

Thanks for any help.

Source record: 120451

Hello,

The first version of the Geneva 005 -> 006 patch program (on the Gribnif Software Web site prior to 6/24) contained an error which rendered the GNVA_DB.PRG flavor unusable. I have, therefore, posted a new, fixed version of the patch program to the Web site, as well as a "fix" program for anyone who has already run the first version of the patch.

If you have a damaged GNVA_DB and never use it, you probably don't need to bother downloading the fix program. Its function will be incorporated into any future patches.

Hi all,

Does anyone know how to solve the problem of mac resource files present on
pc/mac cdroms with METADOS ?
The goal is to ignore mac resource files which appears with the same 8+3 name
as files themselves when using METADOS.
I use a PIONNER DRU-12X SCSI CDROM with METADOS 2.7 on my Falcon.
I have no problem with these cdroms on Linux 68k.

Can I obtain the sources of Metados ?

Thanks for your help.

> a Zip have similar problems?

The Falcon appears to have some SCSI problems. I've done the clock patch
on mine, but it didn't help much. I plan on doing the whole series of
hardware
patches that are needed when installing Nemesis.
As a temporary measure, I have found that selecting SCSI verify in HD
Driver
works somewhat, esp. when using verify on when I'm using Kobold. It's
not fast,
but copied files are OK.
If you use treecheck(supplied with HDDriver[or Kobold?]) or Egale(most
recent
release) you can compare files. Copy some files to your Zip, and then
use one
of these programs to compare the files. You'll find that they are
different
and this is why you executables copied to the zip don't work!

> Thanks in advance
> Guentcho

If you want to read the text files (like read.me) within compressed
files
then I suggest 2in1 by Gregor and using Guck as your text viewer.
I find it very useful to open those compressed files with
incomprehensible
names(i.e. wps67_34.tgz) and double click on the read.me file to read it
in
Guck so I then know what the file is for!
as for fonts, install SpeedoGDOS or NVDI.

I'd like to point out that you can get that MAKEPRN prg with NVDI3 also,
and NVDI4 forces you to use an auto prg in order to have ready access to
the
fonts, which auto prg conflict with other programs I use.
So I'd vote for NVDI3!
anyway

Try to get hold of TW100 version 0.94, it's a development of the
original Toswin which supports vt100 and is adapted to AES 4.x.

In stead of SH or TCSH, you could try BASH, it is supposed to work
fine with MiNT & AES. TCSH v6.03 works here with N.AES, v6.05 does
not, so you can also try this one.

I assume you have a Performa 6300 from your previous post in
comp.sys.mac.advocacy. If it's a hardware issue, Apple did extend the
warranty to seven years due to certain hardware gliches in the 6200/6300
line. I suggest you call Apple up and ask/demand that they replace your
mother board.

Or there is a extension conflict in the extension folder. Either turn
off the extensions or get conflict catcher and that will determine
glich.

As for paying $2500 for a system, thats life.. Computers are a lousy
investment unless you are using to earn a living. I will never spend
that kind of money unless I am making a living off of it. If I were to
buy a new box today would be the $950 Umax 500/180 which is faster than
your 6300.

My father bought a Dell Demension xps Pentium 133 for about $2600 two
years ago and is worth less than half today. He has used it to publish
a book and journal articles. So the cost is justifiable..

Apple is expected to bounce back this quarter with increased sales and a
lower loss than from last quarter.

Philip Morris has bought upto 7000 PowerBook 3400's to replace their
aging Duo's and PowerBook 170's..

Plus Motorola, PowerComputing and Umax are doing very well. There will
be exciting cpu models comming out by fall called the Gossamer using the
Arthur processors that will continue to past what ever Intel has.

You have no idea what Rhapsody is. Rhapsody will surpass NT plus with
ease of use in setup.

Rhapsody is ahead of schedule and that the upcomming Mac OS8 will be
released on July 22.

Windows 95 is an alright upgrade for the ones who were using Wintel 3.1
and DOS. Still not as nice as OS8..

And you think the current state of TOS is Christ?

I've got the drivers around here somewhere that I used with a Mega 4 St and Isac board. I'll try to find them. If you can receive e-mail with attachments, I'll send them. Let me know.

From: Keith Bateman
Subject: Coventry Atari User Group

The next meeting of the C.A.U.G. will be held on :-

Saturday 12th July '97 at Radford Community Centre, Jubilee
Crescent, Radford, Coventry.

The meet will take place between 9.00am 12.00am.

The following meeting will be on 9th August '97, same place, same
times.

I hope you put these dates in your diary, and I hope to see you there.
If you need directions, or have any other queries, about the next meet, then
please feel free to contact me, either here or on voice, but I will not be
available from 28/06 - 06/07 due to a nice break in Holland with my fishing
rod :-).

Right you are about that! I actually had the BATMAN: THE CAPED
CRUSADER game right after I bought my first 520STfm. There were two
disks on it - the first pitted you against the Penguin, the second one
required you to save Robin from the Joker. Didn't have it for too long,
as a) I bought a mono monitor (and you know how some games just won't
cooperate with that :)) and b) I was never any good at games to begin
with (but my roommate at the time was incredible at it).

Of course, now that I have my 1040 and a colour monitor I picked up
for cheap, I'd love to take another stab at it......

: I find them.

Smail comes with smtp server. I don't know about POP3, but I believe I did
see some POP3 related tools ready for MiNT on ftp.fu-berlin.de (IIRC).
Otherwise you could probably port one yourself, from what I gather it is
usually very easy to port UNIX software such as this to MiNT.

If your SCSI port works fine with other kinds of SCSI devices like hard
disk drives or CDROM drives it's unlikely that the port is broken. It
may be a problem of your streamer software, not of your TT's SCSI
hardware.

Yes, no problem, but it has to be the SCSI version, not the // one. THere are a few details about SCSI termination and power that I'm not too familiar with. You also need a SCSI host adapter that supports parity.

ONLY AVAILABLE IN THE:
U.S.A, VIRGIN ISLANDS, AND PUERTO RICO CANADA*

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax, pager, voice-mail, and cellular numbers and give them your New "Virtual Office" 800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone? Wouldn't it be nice to be able to give everyone just ONE phone number that will find you anywhere you are? Even out of town, or in a restaurant, or even on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving, Even without a fax machine! E-Mail Notification and Delivery, Without a PC!, Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888 Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial, Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection, Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web site:
http://www.mynumber.com

* Based on our best priced plan.
* Canada has a higher per minute rate.

> >as mime file from esscode.

I went round and round with esscode/MIME myself a while back. Get
mpack15.* Use munpack.ttp to decode MIME files. No editing of the input
file is needed. Just drag 'n drop, or install app. Under Thing you decode
multiple MIME files in one shot.

> >Next is, esscode like to ENcode this file, not DEcode all time..
> >I'm grazy!?

Gravy? I think not :-) But your right, esscode will only encode files in
.ttp or drag 'n drop mode.

You can use STiK or STING as TCP/IP stack with SLIP Protocol, and all
programs designed for like CAB, mgftp, newsie, ...

You can find at ftp://ftp.ibp.fr/pub/atari/Internet.

David.

4378. Q: tool to move/rename files and directories

Newsgroup: comp.sys.atari.st
Date: 1997-06-27 00:00:00 UTC
From: Guentcho Skordev <ut13@ab272.rz.uni-karlsruhe.de>
Message-ID: <5p0ph1$8v4$2@nz12.rz.uni-karlsruhe.de>
Source record: 120390

Hello,
Is there some program which would help me to rename and move files and directories? I want to organize my disk better without deleting the files and writing them once again.

Regards
Guentcho

THE ATARI ST QUICK FAQ
v1.4 - June 2nd 1997

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the same questions over and over again, here is a quick list of the most Frequently Asked Questions (FAQ) and, hopefully, useful answers.

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA) HTML version

or

ftp://ftp.sn.no/user/hallvart/atari/info/quickfaq.txt (Norway) ASCII version

If you don't have web or ftp access, send me an e-mail at the following address, and I will be happy to send the FAQ to you:

bales@garonne.stortek.com

This announcement is manually posted once every week.

Nick

4381. Graphic cards and games ...

Newsgroup: comp.sys.atari.st
Date: 1997-06-27 00:00:00 UTC
From: dipching@ping.be
Message-ID: <867439582_OASIS_@ping.be>
Source record: 120393

Hello,

I have just read an article about games incompatibility regarding the use of graphic cards like Nova, Matrix, Crazy Dots.

Obviously, you'll not be able to run ST LOW resolution games with these cards installed, BUT, you must be aware that it exists a lot of 'VGA' games that will run with your graphic card ... I have tried a lot of games because, yes there is a lack of them for graphic cards owners ...

These games are graphic cards compatible:

3DLAB
TRIYAHOO
ACCTRIS
AWELE
BREAKOUT
DECADIX
DTE2
DWBH
GEMALIFE
GEMAMIGO
GEMORY
GEMTREK
GEM_MIND
GNUCHESS
ISOLA3
KUBIS
VERRUECK
LANDMINE
LITTLE15
PREMIUM MAHJONG
MOSAIK
MOVE_IT
NANJING
NETHACK
PANIC
PATIENCE
PINGUIN
REKURSI
SOLITAIRE
SOSHANG
SPIEGEL
STELLO

SYMMETRY
TETRIS
TRICKY
TTT
VALENCY
WCOLTRIS
YUKONE

Hope this help

4384. Re: Are pipes and Pause key combinations possible (TOS)?

Newsgroup: comp.sys.atari.st
Date: 1997-06-27 00:00:00 UTC
From: Guentcho Skordev <ut13@ab272.rz.uni-karlsruhe.de>
Message-ID: <5p0p8s$8v4$1@nz12.rz.uni-karlsruhe.de>
Source record: 120396

Hello!

Thanks for the answers. Now I know two solutions - running a shell or running 2in1 with some viewer. (I haven't tried it yet for I am freeing some space now). I don't know if I can install MiNT.

Thomas Binder <gryf@hrzpub.th-darmstadt.de> wrote:
> And yes, there's an equivalent for the "Stop" key of PC keyboards: Ctrl-S
> to stop output, and Ctrl-Q to continue (this is also known as "flow

I have tried Ctrl-S, byt I think it didn't work. At least in TOS programs I started from the desktop.

> A window not being on top. I think the problem is that the original
> author is using TOS 1.02, which can't deal with applications run from
That is the true.

> within an untopped window (or better: the built-in desktop can't run them
> correctly).
I have also problems with assigning applications to some file extensions. I had to write the correct path manually in the DESKTOP.INF file.

> > should work. I think it will actually create a temporary file and delete
> > it afterwards, which may be a problem if he is short of disk space.
> Yes, but as mentioned above, it's the only way to do it with plain TOS.
And it is better than doing it manually.

Bye.

Guentcho

P.S. Yes, I'm a male. The name is a bulgarian one, in a french transcription/transliteration. In English it would be "Ghentcho".

POPwatch the POP3 mail tool for STiK is now at version 2.00 and is available from my web site (see sig).

This version features an awful lot of changes from v1.00 such as:

The ability to send email from NOS/Oasis1.xx, Oasis2, and NEWSie.

Automatic checking of your POP3 mailbox every x minutes, and alerting you of new email.

Various bug fixes and enhancements.

This version is still FREEWARE too.

Please try it, and please, please, let me know what you think of it!!

Regards, Gary

> For now it only boots in showing me two drives and trash can.

That's good, because that is what TOS looks like. At least as regards your TOS it is working. However it sounds like the drive may be bad.

A little history:

The first 520STs were shipped with TOS on a disk. Everyone since then has shipped with TOS on ROMs in the computer. No disks necessary. Most early machines had the TOS chips installed shortly after delivery. That is probably what happened to yours. The original instructions called for the use of the disk.

>Jaz. Big, fast, reliable.
>
>
From what I've heard it seems that the Jazz isn't so reliable. Quite a
few of them have some technical problems. Don't ask me what kind of
trouble but that's what a Mac retailer has told me.
On the other hand the Zip is very reliable. I've a Zip connected to my
TT for almost a year now and I haven't encountered any problem
whatsoever. Ofcourse the Zip isn't so fast as a Jazz but IMHO the Zip
is fast enough for the most common applications.

4391. Atari Computers For Sale!

Newsgroup: comp.sys.atari.st
Date: 1997-06-27 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5p1lflgst1@kelly.teleport.com>
Source record: 120403
Cross-posted to: pnw.forsale,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

I've been recuperating from serious depression. I've still got bills to pay, so I'm going back to work in a limited capacity. Selling Atari in the U.S. I can handle. But for now, I'm cutting back on selling abroad as it's hard enough when I'm in good shape. So I'm dealing with depression in the usual way. 1) Don't make promises I can't keep. 2) Only set goals within my reach. 3) Commit myself to taking weekends off and keeping my mind off of work. Lessons we could all learn.

I have some Hard Drives I got directly from the Shadow of Shadow SoftWare. He says they've worked since they were pulled from their Computers. These are $25 each as is. They are MFM or RLL. E-Mail: bensmith@teleport.com or call Ben at (503)256-9974

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to

for Help.

Hi! I have an Atari STe rotting away in my sister's room after I upgraded to my new Falcon. I'd love to get a VGA monitor for it, but dammit I just don't have the money :(However, if some brave soul would like that STe system, we will be very happy campers. Here's what the setup includes:

Atari 1040 Ste w/ 1 (maybe 2) Megs of Ram
Atari SC1224 Color Monitor
If desired, I have a 2400 baud modem I'll be happy to throw in free.
Good amount of software that my Falcon can't run, including:
Hard Drivin'
Ballistix
Populous II
Stereo Master (digitizer)
Laser C (w/ manual)
HiSpeed Pascal (w/ manual & my old Pascal book from Intro Programming my first year at college (only 2 years old))
Warp 9 Registered Version (excellent speed up program!)
Plus other little shareware gems I've picked up if desired..

I'm asking $400 (obo) for the entire package plus shipping and handling from the Poconos, Pennsylvania, to wherever the heck you live. The computer and all software includes original docs, software comes with original covers. Computer is in perfect condition except for the right shift key is broken. Other than that, it has been an excellent and dependable machine over the years.

Please email all responses to the same address as this letter is from, quantum@sunlink.net. I wish I had time to read this great newsgroup for responses, but alas, I cannot... :(

Thanks in advance, look forward to talking to you,
George Garner

if it's not available yet from Computer Direct, it should be pretty
soon. The main problem was that at the time the English version of CAB2
was made available, it didn't have a printed manual (although the disk
itself has a manual in ST GUIDE format). Since then the manuals have
been released.

I just received my manual in the mail, BTW (I bought CAB 2 during my
trip to England at the Birmingham Atari show and signed up for the
manual to be sent to me), and it's perhaps the nicest-looking manual
System Solutions has ever produced - for one thing, it has a colour
cover. Good one, Karl.

CAB 2 itself is pretty marvelous.

Does anyone know if a ZIP drive be used with an STFM??

Thanks.

4401. Good News For RGB Users!!!

Newsgroup: comp.sys.atari.st
Date: 1997-06-27 00:00:00 UTC
From: ab453@cleveland.Freenet.Edu
Message-ID: <5ov144$j39@alexander.INS.CWRU.Edu>
Source record: 120474

Good News For RGB Monitor Users!!!!

A new product, the VideoTurtle from Turtle Enterprises, is now
available! This product converts RGB known as TV RGB, into S-Video
signals. Replacing the need for an older TV RGB Monitor.

ANY SYSTEM, that outputs TV RGB, can use the VideoTurtle. Some of the
many are:
Sega Genesis/32X/CD-ROM
Amiga
Atari ST
Neo Geo
Apple IIgs
MSX II/MSX II+
Adam
Commodore 128
TV RGB Monitors(for uses other than computer/video games)
Video Arcade Games, ones that output RGB.
IBM CGA

Please, no flaming! If interested in the VideoTurtle from Turtle
Enterprises, please email me-ab453@cleveland.freenet.edu

Thank you!

James W. Krych

AM>> one that might increase my screen resolution. An suggestions as to
AM>> what sort of monitor would be best suited for such graphics cards
AM>> would be most welcome.

HS>> You need a VME graphics card, such as one of the Matrix, Crazy Dots
HS>> or Nova boards. They each come with their own screen driver
HS>> software, but the general recommendation is to use the NVDI special
HS>> versions (either Matgraph or ET4000 versions).

HS>> System Solutions will have graphics cards of good quality but
HS>> probably expensive. The last I heard Nick Harlow at 16-32 also had
HS>> several Nova boards available at more reasonable prices.

HS>> You'll also *have to* get a VGA or (ideally) SVGA monitor to view
HS>> the output
HS>> (ST monitors cannot work with graphics cards), so that's a
HS>> significant additional cost.

HS>> We are talking hundreds of pounds to go thsi route and you'll need
HS>> to be aware that there are many compatibility issues with graphics
HS>> cards due to the insistence of some software on expecting standard
HS>> ST resolutions.

HS>> For example you can forget *ALL* games bar one that I can think of...

Can you tell me if such a card would fit into the standard STe case, and
what memory, or other system requirements it would require. Could you
also give me a rough estimate of how much such a graphic card would cost
and would you recommend a multisync monitor, so as to get more screen
resolutions - I believe this would allow me to display the ST standard
resolutions - but do tell me if I'm mistaken.

Cheers, Alan.

Message-ID: <5ovjbn$1la@rzunews.unizh.ch>
Source record: 120478

What type of battery keeps the clock running during power-down?
Knowing the exact type will save an additional cycle of unplugging, unscrewing tightening screws, replugging.
As in the near future several batteries will deplete, I think the answer might be considered an entry in the FAQ.

Thank you in advance

H. Klotz

> Does anyone know if a ZIP drive be used with an STFM??

Yes, this is possible. You need a SCSI ZIP (the parallel version won't work!) and one of the usual SCSI host adapters, LINK96/97 if possible. With appropriate driver software (like HDDRIVER) you can even make use of the unique read/write protection features supported by ZIP and JAZ drives.

6 STimul

6.0 STimul
6.1 Where do I find the software?

I: INITIAL PROCEEDINGS

1.0 WELCOME!

Atari ST emulation has been around for a while, yet all this time nobody ever got their noses down to the grindstone in order to create a means for users of emulator the likes of GEMulator, PacifiST, STonX, STonX and STimul to exchange hints and tips, in other words to conceive a basic document that contains information that ST emulation fans would no doubt value like life itself. Well, this is it. It started off as a GEMulator-only FAQ, but it almost logically evolved into a more broad-minded platform.

In case you are not familiar with the concept of FAQs, please read the next paragraph.

1.1 What the FAQ?! ("What is a FAQ?" for the more sensitive)

FAQ simply stands for "Frequently Asked Question", but it has come to indicate a text file full of information about a certain subject. And somewhere in the infinite nooks and crannies of the vastly obscure Internet you can find FAQs for just about anything at all: Sitcoms, rock groups, bomb-building, hallucinogenic substances, Amigas, Serbo-Croatian bonsai tree aficionados, you name it!

1.2 How and where to get updated FAQ versions

The idea for this FAQ came into existence somewhere around the end of 1996, at which instant its creators both started to collect the various messages pertaining to Atari ST emulation that made their way onto the various Atari Usenet groups, most particularly onto the group they quite regularly frequent, comp.sys.atari.st.

There will also be more or less frequent updates of this document, of course, which will be posted to comp.sys.atari.st and comp.emulators.misc. Of course the FAQ will also be put up on the Web. It can be found at the following locations:

http://members.iglou.com/rsg0910/atstemu.faq.html
http://www.users.zetnet.co.uk/fujizone/files/stemufaq.zip

If you want to receive the current version of the FAQ in your email box every time a new one is released, just email to cronos@worldaccess.com with the subject line "Subscribe Atari ST Emulation FAQ".

1.3 How to help improving the FAQ

First of all, please distribute this FAQ to FTP sites, WWW sites, bulletin boards and whichever other places you deem fit. The word must get around so that this FAQ will quickly improve drastically. Right now it contains rather more questions than it does replies, which is a thing that must change.

Second, if you notice anything - anything AT ALL - that is either incorrect or incomplete, please feel free to fill in the gaps (possibly with source reference). Even typo reports are welcome. Most of all, however, we would appreciate your sending in solutions to the problems posed in this document, or submitting procedures that people would need to undertake to render compatible a program so far included in the 'no way' list. Also, we would simply like to know of programs you are using successfully that aren't yet mentioned in the lists of those that work, or ones you've tried but that don't.

You will notice that the STemu and, even more so, the STimul segments in particular are fairly skeletal. Please help us enlarge them.

Cheers!

1.4 Emulation URLs not mentioned elsewhere

Further down in this FAQ, information is given as to where to get all kinds of software specific to the respective emulators. This paragraph lists URLs and the like regarding either emulators that are not (yet) in this FAQ or general stuff that can be used for any emulator.

Do note that the mere fact that some of the below URLs might possibly give way to the illegal distribution of copyrighted software does not mean that the authors of this FAQ condone such an act.

For MagicPC: (German)
http://cip2.e-technik.uni-erlangen.de:8080/hyplan/lafreund/magicpc.html
ftp://members.aol.com/ashftp/demomapc.exe (English)

For TOS2Win:
http://www.aixit.com/tos2win/info.htm

For other emulations go to Matthias Jaap homepage:
http://www.hh.schule.de/hhs/computer/english/emulator.htm

For a Teradesk Desktop Replacement:
ftp://ftp.cnam.fr/pub/Atari/Desktops/tdsk140a.lzh

For software:
ftp.cnam.fr
ftp.archive.umich.edu (a very busy site!)
gopher.archive.umich.edu (preferred)

For the TOS ROMs:
http://nana.nfinity.com/node99 or 206.101.78.248/node99 (slow!)
http://www.geocities.com/SiliconValley/Pines/2425/Tos_roms.zip
http://www.geocities.com/SiliconValley/Pines/7550

Comp.emulators.misc FAQ (maintained by Adam Roach):
http://www.why.net/home/adam/cem/toc.html

1.5 Author information

1.5a Richard Karsmakers

A teacher of English since January 1997, some of you may recognise Richard from some things he's done on the Atari platform, which include the "Ultimate Virus Killer" and the disk magazine "ST News". Although he has in the mean time rounded off the latter, he has vowed to continue developing the former. This, together with his disinclination to convert hundreds of "Superbase" and "1st Word Plus" files to "Access" and "Word" respectively, is the main reason why he is now the owner of a PC set-up with Atari emulation.
He still writes for "Atari Computing" and the Maggie" disk magazine occasionally, and plans to set up a World Wide Web Multi Media Magazine called "WWW-MMM". Having a penchant for loud music, he also maintains the FAQ for the rock group Gwar.

1.5b Robert Goodwin

A deaf computer user since about 1978, Robert has used a number of the older platforms when they were released, and has nothing but respect for them. Though he has built his own 486 system, he still uses his STE and Mega STE, as well as a Sun 3/60 workstation. He's currently attempting to learn more C to write some sort of BBS program or somesuch. Give it time! He's not about to give up his ST systems, though he'll test things out on a variety of ST emulators just to see if they'll run, and then abuse them from there.

1.6 Atari ST Emulation FAQ history

1.0 - 1 March 1997
- Initial compilation rounded off, GEMulator-only

1.5 - 11 May 1997
- Second, improved version
- STonX, PacifiST, STemu, and STimul added

- Reformatted to 75 columns for more universal readability
- Chapter division restructured, hopefully made more logical :-)

1.6 - 28 June 1997
- Compatibility and incompatibility lists added to
- STonX download URL altered
- PacifiST and STemu status information updated

1.7 Thanks

Lots of thanks to the people on Usenet who have reacted positively to the idea of creating this FAQ - this one's for you! Quite a few people have reacted by submitting questions, sometimes even questions accompanied by an answer. Although we'll no doubt have forgotten a few people here, heartfelt 'cheers!' need to go out to Ben-John, Nicholas Bales, John Blackwell, Adrian Bridgett, Damien Burke, Will Fisher, Andrew Foster, Tony Greenwood, Anthony Jacques, William Jones, Matthieu Klein, Ken MacDonald, Miguel Reizinho, Helen Ross, Oliver Schildmann, Harry Sideras, Mark Slagell, Philip Taylor, Jeff Vincent and Manfred Vogelgesang.

II: GEMULATOR CLASSIC AND GEMULATOR96

2.0 GEMulator

GEMulator96 is a software Atari ST emulator for PCs, created by Darek Mihocka of Emulators, Inc. It emulates most of the ST systems released by Atari, the 520/1040ST, STfm, STf, STm, MegaST and MegaSTE.
Darek Mihocka, in case the name rings a bell, used to be the main man of Branch Always Software and has made, among many utilities, the Atari screen speeder "Quick ST".

GEMulator Classic (current version 3.6) can only emulate the Atari ST. This product is freeware (yes, it's for free!) and works on MS-DOS, Windows 3.1, Windows 95 and OS/2 Warp, requiring at least an 80386 processor running at 33 Mhz, with 2-4 Mb of internal RAM.

GEMulator96 (currently version 4.6 of January 1997) costs US$ 69.95 separate, US$ 99.95 with MagiC 2, US$ 119.95 with MagiC 4, US$ 149.95 with TOS 1.04 ROMs on an ISA card, and US$ 179.95 with TOS 2.06 ROMs on an ISA card. Users of MagicPC (a competing product) can upgrade to GEMulator96 for US$ 39.95. It runs on Windows 3.1, Windows 95 and Windows NT, and requires at least an 80486 processor at 33 Mhz, with 6-8 Mb of internal RAM and a VGA monitor. It works on systems equipped with 386/486/Pentium or Pentium Pro.

Emulators, Inc. also offer to send you the latest GEMulator with MagiC 4 if you send them your old ST or (Mega) STE with disk drive and at least one (monochrome or colour) monitor. They'll even pay the shipping of GEMulator to you, the kind souls :-\

GEMulator97 is in the pipeline for the summer of 1997; this one should also support Atari TT emulation, Falcon, ST, STE and Atari 8 bit (yes, all in one package).

2.1 Where do I find the software?

Emulators Inc. can be reached via email at emulators@msn.com, which is also the address where additional questions about GEMulator may be asked. The regular (snailmail) address is:

Emulators, Inc.
14150 NE 20th Street, Suite 302
Bellevue, WA 98007
U.S.A.
Phone 206-236-0540
Fax 206-236-0257

For GEMulator Classic and GEMulator96:
http://www.emulators.com (click on Downloads)

For the virtual drives:
http://home1.swipnet.se/~w-11410/js/gem96dem.zip
(Just take the drives out of the zip file and stick them in your GEMulator directory)

2.2.0 How do I install it?

Darek Mihocka, of Emulators, Inc., has said before that a manual is in the making for the GEMulator Classic, but one has not surfaced yet. There is one on setting up the GEMulator96 (to be found on the Emulators, Inc. home page).

2.2.1 Installing the GEMulator Classic

Create a directory anywhere on your hard drive. GEM is a good one, though you may want a different one. Place GEMUL8R.EXE, and MAGIC_PC.OS in your directory, as well as the .VHD and STHDBOOT.SEC files.

Create the GEMUL8R.INI file. You can use the one below. See 2.2.3 for a breakdown of what each line does.

```
rams 8
mono
quick
com1
disk c: cdrive.vhd
disk d: ddrive.vhd
disk e: edrive.vhd
disk f: fdrive.vhd
magic_pc.os
```

You may have seen somewhere that the .INI file has to go in the root. This is an error. The emulator is looking for it in the same directory it's in. If you want it in the root directory, then make it 'magic c:\magic_pc.os,' and it'll find it there. The nice thing about this sort

of set-up is that you can have multiple operating systems and desktops.
Run the GEMUL8R.EXE program. You should now be able to see the boot-up screen with the Atari logo, at which moment it'll start a memory check. This check can be bypassed by tapping any key on the keyboard. If all goes well, you will be at the desktop with 4 virtual drives C-F, and two floppy drives A and B.
You may also see that you cannot install the ROMs via the program, using the INSTALL command. This is for the plug-in card that Emulators Inc. sells. See their home page for more information. GEMulator will run without the ROM images if you have this card.

2.2.2 Installing GEMulator96

The Emulators Inc. Web page has instructions on doing this. However, there may be some minor errors or whatnot, so watch this space.

2.2.3 Creating the GEMUL8R.INI file

This paragraph features a breakdown of what the individual lines in the GEMUL8R.INI file do.

rams 8
How much memory do you wish for your ST to have? Make sure you have enough RAM as well. A 4 Mb PC should use rams 4. Possibly, the amount of RAM you specify should be lower than what the PC actually has.

mono
What kind of monitor? For now, the GEMulator Classic only uses either low or high resolution.

quick
How fast do you want the emulation to be? Quick or Slow? ST speed or PC speed?

com1
What port is your modem on?

disk c: cdrive.vhd
disk d: ddrive.vhd
disk e: edrive.vhd
disk f: fdrive.vhd
The virtual hard drives. If you don't have them, the emulator will give you an error saying it can't find them, and all you'll have is access to the A: and B: drives. See above where to find them.

magic_pc.os
This is your TOS ROM image. For now, most people are using 2.06. If your image is called TOS.IMG, rename this line to magic tos.img. It will run. Without this line or the .INI file, it will default to searching for the MAGIC_PC.OS file. Do note that no version of TOS 1.00 will work with GEMulator.

g
Will allow you to go straight into the ST screen. This appears not to be

needed when you use Windows 95. With some systems, you see, you'll just get a white screen and nothing will happen is you omit this 'g'.

2.4.0 No Way - What won't run on the GEMulator?

This segment features a list - as complete as we could make it - of various programs that do *not* work on the GEMulator. Individual games (just like Falcons-specific applications such as "Rainbow") are not mentioned, as they generally do not work. Exceptions may be found below, in 2.5.x.

2.4.1 Drawing & Art

Deluxe Paint (the mouse can't be moved)
Kandinsky
NeoChrome
Spectrum 512

2.4.2 DTP, Word Processing and Text Editor

No titles known yet.

2.4.3 MIDI and Sound

No titles known yet.

2.4.4 Programming Utilities

No titles known yet.

2.4.5 Spreadsheets & Databases

No titles known yet.

2.4.6 Communications

No titles known yet.

2.4.7 Disk Magazines

Maggie (probably caused by the music).

2.4.8 Various (including most Utilities)

Autoroute
Diamond Edge
FastCopy pro (appears to work fine if a bit slow, but the target disk has 0 bytes free and no folders)
Freedom (see chapter 5)
Kobold File Copier
LEDPanel (doesn't display anything)
Microtalk QWK Reader
ST Zip (it cant deflate anything; this is not much of a problem, though, as "Winzip.exe" can be assigned to be used, even from GEMulator, and this is much faster anyway)
Xboot (though it can be used to manually rename CPX, AUTO\.PRG and ACC

files, it cannot handle its function key sets)

2.5.0 YES Way - This will run on the GEMulator!

This segment features a list - as complete as we could make it - of various programs that *do* work on the GEMulator. Where needed, hints are given on how to make programs work that may initially seem reluctant to function properly or efficiently.

2.5.1 Drawing & Art

Bitmap View 4
Canvas
Degas Elite
Graph 1.20 (produces graphics as GEM metafiles)
ImageCopy
Papyrus (though right mouse should be avoided, and printing allegedly runs into problems with NVDI, so print to a disk file and use a batch file on the Windows desktop with the contents "COPY /B %1 LPT1" to drag that file onto).

2.5.2 DTP, Word Processing and Text Editor

1st Word Plus 3.20TT
Calamas 1.09n
Calamus SL
Everest
Pagestream
Papyrus (change printer output to "via TOS")
Protext
QED 3.97 (text editor)
Tempus (although it does give a "THIS APPLICATION CAN'T FIND THE FOLDER YOU TRIED TO ACCESS" error whenever it's exited - anyone know why, and how this can be solved?)

2.5.3 MIDI and Sound

No titles known yet.

2.5.4 Programming Utilities

DevPac ST (*the* standard assembler from HiSoft)
GfA Basic 3

2.6.0 GEMulator problems...and how to solve them

This is one of the most important segments of the FAQ for GEMulator users
- the part where practical problems are exposed and consequently -

hopefully - tackled. It's divided in what is hopefully a practical structure.

2.6.1 Software compatibility

FREEDOM

Q: "Freedom" appears not to work properly. When you try to save a file with it and the original file already exists, it will merely update the date and time stamp of the original file, but not change its actual contents.
A: Save under a different filename, then exit, delete the old file, and rename the new. Strange, but that's the best workaround for now.

GENEVA

Q: When installing "Geneva" via its own installation program, one of its vitally important files, GEM.CNF, is always 0 bytes in size. "Geneva" always needs the specifications in this file when, for example, you want to have "NeoDesk" used as default 'shell'.
A: Create a text file such as the one displayed below (edit it to your own specifications):

```
# GEM.CNF: written by INSTALL.PRG
#
setenv ACCPATH=C:\
setenv PATH=.,C:\GENEVA
setenv ACCEXT=ACC,ACX
setenv GEMEXT=PRG,APP,GTP,EXE
setenv TOSEXT=TOS,TTP
setenv SHOWHELP=C:\GENEVA\HELP\GNVAHELP
# setenv TOSRUN=C:\GENEVA\GNVA_TOS.PRG
# Other commands:
# run <program> <parameters...> Runs a program with parameters
# runsleep <program> <parameters...> Runs program, puts it to sleep
shell C:\NEODESK4\NEODESK.EXE Runs program as the shell
#
# end of GEM.CNF
```

GFA BASIC (COMPILER)

Q: When you use "MENU.PRG" to compile a program, you specify "FILE.GFA" but, for some or other reason, the actual compiling module attempts to access the file "FILE.GFA.GFA"; it autonomously puts an additional (and superfluous) extension behind the file, causing it not to be found.
A: This can be solved by having two identical copies of "FILE.GFA", with the second called "FILE" (right, with no extension). Now manually drag "FILE" onto "GFA_BCOM.PRG". The file "FILE.GFA" will be accessed and compiled, resulting in a "FILE.O" file. Now start "MENU.PRG" and act as usual (F2, F10 is what I usually so, then select "FILE.GFA"). The compiling process will give an error (file not found), but that's no problem and the linking process will access "FILE.O". One "but": You cannot specify the compiler options from "MENU.PRG" anymore, so include

them in your source file.

REVENGE DOC DISPLAYER

Q: "Revenge Doc Displayer" refuses to be installed properly as "default" application for applications not yet assigned to other files.
A: There seems to be no other solution than to edit the NEWDESK.INF file and add lines similar to the following (include your own RDD3.PRG path):

```
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.TXT@ @
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.ASC@ @
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.ME@ @
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.1ST@ @
```

STOS

Q: Why don't some compiled STOS programs work? This could have something to do with the TOS version (I'm using 2.06), because a similar problem appeared in real life on the ST a few years ago, but even with the later versions of STOS the mouse/keyboard don't respond...
A: It should be noted that, with the latest version of the STOS compiler, everything should work fine, and the mouse will work too.

XBOOT

Q: "Xboot" cannot read and save its default 'sets', it cannot find its own C:\XBOOT\" path.
A: The solution may be to start using Virtual disk files. Is there a solution for regular (non-Virtual) disk mode?

2.6.2 Programming under GEMulator

END OF FILE RECOGNITION

Q: In "GfA Basic", the EOF(#x) command doesn't find the end of a file.
A: There is no true solution for this one. If the program that needs to read (for example) a configuration file using EOF(#x) still has its source code available, you could change the WHILE NOT EOF(#x)...WEND loop to a DO...LOOP where you exit the loop if an empty line is read (with LINE INPUT). So you have to make sure you add an empty line or two at the end of, in this case, the configuration file.
A: A better workaround:

```
Function EOF(Channel%)
Return (LOC(#Channel%)>=LOF(#Channel%))
Endfunc
```

So instead of WHILE NOT EOF(#x) you can write WHILE NOT @EOF(x).

JOYSTICK EMULATION

Q: Can joysticks be emulated?
A: ?

WRITE-PROTECTED DISKS

Q: There is a perfect way to check the write-protect status of a floppy
disk on *any* Atari system (Falcon, TT, ST, whatever), achieved by the
following piece of code ("GfA Basic"):

```
FUNCTION wrpr(crd%) !crd% contains 0 - drive A or 1 - drive B
SDPOKE &H43E,-1 !Floppy operations off
~XBIOS(29,NOT (2*(crd%+1))) !Select drive
SDPOKE &HFF8606,&H80 !FDC-status register select
buf%=DPEEK(&HFF8604) !FDC-status register read
~XBIOS(30,2*(crd%+1)) !Deselect drive
SDPOKE &H43E,0
buf%=(buf% AND 64)/64 !Isolate WP-bit
RETURN buf%
ENDFUNC
```

Predictably, due to the direct access on addresses FFFF8604 and FFFF8606,
this doesn't work on the GEMulator. How can this be solved?
A: ?

2.6.3 Miscellaneous

Any GEMulator-related problems that didn't fit in either of the two
previous categories will be addressed in this paragraph.

AUTO FOLDER ON DRIVE A:

Q: How do you boot programs from an AUTO folder on drive A?
A: Set the 'Boot disk' option to drive A (RTFM!).

INSTALLING GEMULATOR96 WITHOUT TOS ROM CARD

Q: One beautiful day, my GEMulator96 TOS ROM card was suddenly no longer
recognised by the software. It said 'GEMulator not running'. Don't know
what caused it; I certainly did no fumbling around and added/removed no
hardware or anything. I took the ISA card out and inserted it again, but
no show. Took the ROM chips out and inserted them again. The TOS ROMs are
simply no longer recognised, the 'find TOS' option finds absolutely zilch.
A: I wouldn't know how to solve this. Maybe you should sell the ROM TOS
chips and simply throw away the TOS card, use the GEMulator with TOS on
disk.
Q: OK, all you guys talk about using GEMulator with TOS on disk.
Apparently you should have a file called 'magic_pc.os' in the root
directory of partition C. This does not work. Also, you guys mention
altering the INI file, but that isn't even a simple ASCII file with me!
A: Ah! That's the GEMulator *demo* that you found everybody talking
about. The real thing, the registered version of GEMulator96 you appear to
own, has no ASCII INI file and looks for the file 'magicpc.os' in the root
of C:. Yes, simply leave off the '_' between 'magic' and 'pc' and off you
go.

I/O PROBLEMS ON GEMULATOR CLASSIC

Q: I have several problems with I/O on GEMulator Classic:
- Serial port: there is no DTR signal. Cannot talk the to modem unless I

have first sent "at&d0" (ignore DTR, for USR Sportster 14.4 external) from outside GEMulator before entering Atari mode. But even then it goes unresponsive after connect.
- Parallel port: errant characters are sent to the printer for no reason I can think of. Every now and then the laser printer spits out a page with a single capital "E" in the upper left corner.
- Floppy: media change is seldom recognised. I have to reboot when changing floppies.
A: Regarding the media change, you can tap ESC when changing floppies and it should recognise the media change.

MS-DOS VS. ATARI-FORMAT DISKS

Q: I cannot read all Atari disks on the PC.
A: MS-DOS and Windows are very picky when it comes to being able to read disks. Even though Atari systems use a disk format that is largely compatible with PCs, MS-DOS and Windows require very specific values to be present in a disk's bootsector. Together with GEMulator you should get a program by the name of MOSDOS.PRG. This Atari program will transform Atari-formatted disks into ones that MS-DOS and Windows can read. Do note that this does not work with non-standard Atari format (such as 10 sectors per track 'FAT' disks, hyper-formatted disks, etc.).

PRINTING

Q: When I print, the printer stops before the printer buffer is fully flushed. I have to start another print job to finish my first job. I'm using GEMulator 4.15 on a P133 running Win95. I've tried default, Fast BIOS Printing, and FPPRINT (or whatever it's called) with the same results. I'm trying to print to a Canon BJ-200. I had no such problems using GEMulator 3.x on my old 486 DX2/66.
A: Is it possible that you may need to send the EOF character, that is, a CTRL-Z, for it to actually start printing?

SOUND

Q: On GEMulator Classic, with sound emulation on, the first key press starts a continuous high-pitched tone, not too loud, from both channels (Soundblaster clone, Forte 16). On GEMulator96, there is a constantly repeated sound, as if the volume is turned on and off a few times per second. XBIOS 32 sound is garbled (Soundblaster clone OptiMAD). Setting the blaster environmental variable doesn't help.
A: ?

III: PACIFIST

3.0 PacifiST

PacifiST is a software Atari ST emulator for PCs, created by Fr&#65533;deric Gidouin. It works best under DOS, but also runs smoothly from Windows 3.11 or Windows 95. Minimum configuration is a 100 Mhz 486, and a Soundblaster-

compatible soundcard if you want to hear something. PacifiST emulates the basic ST system released by Atari. PacifiST, amazingly, is FREEWARE, meaning it's for free, although Fr&#65533;deric would like to occasional (and much deserved!) donation as most of his time goes into the programming and developing of this package. The biggest advantages of PacifiST are that it can run quite a few ST demos and games. Also, it can use both big image files *and* regular PC mass storage media simultaneously, where GEMulator can only have one or the other.

The current version is 0.44 (May 29 1997). Fr&#65533;deric claims the next version will be an important leap pertaining compatibility and capability.

3.1 Where do I find the software?

The programmer, Fr&#65533;deric Gidouin, can be reached at email address frederic.gidouin@hol.fr, or via the snailmail address below.

Frederic Gidouin
9, Allee du Chevrefeuille
F-29280 Plouzane
FRANCE

Official PacifiST home pages:

http://ourworld.compuserve.com/homepages/bfozard/pacifist.htm

A variety of PacifiST utilities can be found around the Web, too.

AssiST:
http://www.iol.ie/~ajankows/st/pacifist.html

PaCiLOAD:
http://www.labyrinth.net.au/~contact/paciload.zip

MSAtoST:
http://www.jetman.demon.co.uk/st/index.html

IMGBUILD:
http://www.geocities.com/SiliconValley/Lakes/6878/download.html or
http://wwwperso.hol.fr/~gidouin/download.html

3.2.0 Installing PacifiST

Place everything in its own directory, and modify the entries as described below in the PACIFIST.INI file, then run the PACIFIST.EXE file.

3.2.1 The PACIFIST.INI file

This file sometimes changes as Frederic puts more changes in Pacifist and
makes it run better. This will attempt to keep up in some way with the
latest revisions as possible. Read the PACIFIST.DOC for more info.

```
; PaCifiST v0.xx INI file
; New directives are commented

[video]

refreshrate = 1
(Every how many frames do you want the screen to be refreshed? 1 is
normal, unless your system gets jerky screens, then increase the number.)

monochrome = no
(Do you want a monochrome screen? Yes for color, no for mono.)

fastvideo=yes
(Do you have a slow video card?)

[system]

pcdrive = no ;REALLY NOT RECOMMENDED. sorry to insist...
(Read the comment. It's not done yet.)

sensitivity = 4 ;Mouse sensitivity (not with build-driver).
internalmouse = no
mousecom=1
(At what COM port is your mouse located?)

joystick=yes
(Are you using a joystick?)

serial=no

autorun=no
(Do you want to go directly from the display monitor to the program?)

ramsize=2
(How much memory do you wish to have? The DOC file contains info on how to
do this. An 8 meg machine can easily handle a RAM size of 6, while those
machines at 16 megs can do 12-14 megs.)

Sound=yes
(Sound or no sound, that is the question.)

volume=255
(How loud do you want it? 0-255 is the limit, though your soundcard setups
can be changed. If it's coming out of a stereo or speakers, use that)

samples=yes
(Play ST sound samples?)

image=c:\pacifist\disk.st
(This is your disk image, your drive A:. Unless pcdrive=yes above, which
it shouldn't be due to some bugs, it'll actually read the floppy. You can
have a second line like this - with a different path specification, of
```

course - for drive B)

mount=c:\pacifist\stfiles
(Your own hard drive image, actually a directory. Change it to where your
directory is located. You can place files in there if you wish merely by
copying them there. This is *not* a virtual disk, like 'image' above)

tos = d:\motorola\tos\tos100.rom ;Of course, you must edit this
line
tosbase= 0xfc0000 ;to indicate YOUR Tos file location.
;tos = d:\motorola\tos\tos162.rom
;tosbase= 0xe00000
tos = d:\motorola\tos\tos206.rom
tosbase= 0xe00000
(These above don't need much explanation. They're the TOS ROMs. Keep the
tosbase address the same, do not change at all. You can change the path
name to the ROM images.)

[debug]

logfile=c:\pacifist\st.log
trapirq = none
logirq = none

3.4.0 No Way - What won't run on PacifiST?

This segment features a list - as complete as we could make it - of
various programs that do *not* work on PacifiST. Individual games (just
like Falcons- specific applications such as "Rainbow") are not mentioned,
as they generally do not work. Exceptions may be found below, in 3.5.x.
Some titles may be in here although they work when you try them; this is
then probably caused by people not have tried both screen modes (so please
contact us soon and tell us in which screen mode it works for you).

3.4.1 Drawing & Art

Photochrome
Speed of Light

3.4.2 DTP, Word Processing and Text Editor

No titles known yet.

3.4.3 MIDI and Sound

K-Rhyme
K-Roget
Mega Depack
NeoDesk 3 (autorun seems impossible though?)
NVDI 2.11
Pack Ice 2.4
Revenge Doc Displayer
Ultimate Virus Killer (can even check images for viruses)
What Is
XControl Panel

3.5.9 Games

Don't Worry be Happy

3.6.0 PacifiST Problems...and how to solve them

This is one of the most important segments of the FAQ for PacifiST users - the part where practical problems are exposed and consequently - hopefully - tackled. It's divided in what is hopefully a practical structure.

AUTO FOLDER

Q: I've got an AUTO folder in the root directory of mounted partition C:, but still it doesn't work. Why?
A: Create a disk image for drive A with an AUTO folder on it, throwing in all stuff you need. You can change the drive A path once PacifiST is running with 2 or 3 keystrokes.

ITEM SELECTOR

Q: The item selector of TOS 2.06 cannot select another drive by means of the shortcut buttons. How come?
A: ?

SUNDOG

Q: I've got PacifiST running great, but roughly every 20-30 minutes it freezes up. The monitor goes all red and nothing in the game I am playing ("Sundog") will work. I can still return to the emulator, but no command seems to help (e.g. F1 screen toggle, etc.). Some background info: I am

running PacifiST on a 486/25 with 3 megs of RAM. I am using TOS version 1.0, 2.6 didn't seem to take too well.
A: Could this just be a "Sundog" incompatibility? Copy protection or such?

GFA BASIC

Q: I get really weird errors in "GfA Basic" source code when in the interpreter, and similarly when I run compiled programs.
A: File I/O goes wrong with GfA Basic unless you run from virtual disks.

THAT'S WRITE

Q: I use pacifist 0.44 and programs like That's Write. I constantly face the problem that I cannot select documents from folders within a given program. I will get the following message instead: "this folder does not exist...". I am still able to read the list of documents included in that folder but will not be able to load any document. To load a document I have to leave That's Write and I have to drag the document on the image of That's Write on the desktop. I face similar problems with fonts I cannot load within That's Write. Some fonts do not appear inside their font folders when looked for within That's Write program. Does somebody have a solution for that problem?
A: There seems to be a small bug with Hard Drive emulation and folders. Try making a BIG floppy disk image (like 4Mb), and run your critical software from there. Most HD problems can be resolved that way, even if it is not the most 'elegant' solution. I believe the author is working on the problem.

3.6.2 Programming under PacifiST

No entries yet.

3.6.3 Miscellaneous

Any PacifiST-related problems that didn't fit in either of the two previous categories will be addressed in this paragraph.

DATE & TIME STAMP

Q: When you copy files from virtual disks to an actual PC partition, the date and time stamp is all wrong. How come?
A: This is a bug in PacifiST. Fr&#65533;deric is aware of it since 0.43.

KEYBOARD MAPPING

Q: In gemul8r classic some of the keys on the keyboard are not mapped properly. For example Shift+2, which should give the @ symbol gives the " symbol. I also have a problem with one of the slashes (forward or backward, I can't remember). Does anyone have a list of the keyboard mapping?
A: Doesn't this vary per TOS version and per TOS language?

VBE 2.0

Q: To be able to let some games and demos run, you need something called VBE 2.0. Where can it find it?
A: VBE 2.0 is a standard of programming video cards and is much faster than the older VBE 1.1. Some video cards have VBE 1.1 on board, but if they don't then you can install a VBE 2.0 emulator, which is the thing meant here. There are specific versions for specific video cards, but there's also a popular one called "UniVBE" (a.k.a. "Display Doctor") by SciTech (http://www.scitechsoft.com/). This works on most (?) video cards. It comes free with some commercial games and is shareware. The file to look for is sdd53.exe.

III: STONX

4.0 STonX

STonX is an Atari emulator for UNIX written by Marinos Yannikos, currently at version 0.6.5. It's been ported to a DOS environment by Dirk Jansen.
An official port for Windows 95 is underway, supporting such features as DirectX and DirectSound. Expect a new, vastly improved version soon.
There is a rumour floating around that someone is writing an Atari ST Emulator in Java, based on STonX. We'll keep you posted.

4.1 Where do I find the software?

Its author, Marinos Yannikos, can be reached at the following email address: nino@complang.tuwien.ac.at.

Official STonX website:
http://www.complang.tuwien.ac.at/nino/stonx.html4.2

Place everything in its own directory, for example \STONX\. It will go looking for a TOS image file called TOS.IMG. Run the STONX.EXE file, and go from there. Adding a /? will have it come up with a listing of commands. Below is this listing of commands;

usage: STONX.EXE [<options>]
<options> =
-q Be Quiet
-size <W>x<H> (NYI)
-disk <X>:<File> Load diskfile <File> as Drive <X>:
-fs <X>:<Directory> Map <Directory> to Drive <X>:
-colo[u]r|-mono Set `monitor type'
-usec <X> Set <X> microsecond interval timer
-vbl <X> Set <X> * usec VBL interval
-timer-c <X> Set <X> * usec Timer C interval
-refresh <X> Set <X> * VBL refresh interval
-para <file> Use <file> as the parallel port device
-serial <file> Use <file> as the serial port device
-kmap <file> Load the Keyboard mappings from <file>
-noaudio Disable Audio driver
-noshm Disable XShm extension

-chunky Use `chunky' update mode
-warmboot Attempt to simulate a warm-boot
-private Use private colormap (speeds -color up)
-cconws Redirect GEMDOS Cconws() function to terminal
-vdi Use xlib-VDI

Example:

G:\STONX\STONX.EXE -disk a:Disk -color -usec 10000 -vbl 10 -refresh 2
-timer-c 1

...will use `Disk' for drive A:, boot in colour mode, and run Timer C at
100Hz, VBLs at 10Hz, and refresh with 5Hz, if your system allows interval
timers with 10 ms timer intervals (see setitimer(2)).

For the Linux/Unix version, follow the instructions in the documentation
file that came with it.

4.4.0 No Way - What won't run on STonX?

This segment features a list - as complete as we could make it - of
various programs that do *not* work on STonX. Individual games (just like
Falcons- specific applications such as "Rainbow") are not mentioned, as
they generally do not work. Exceptions may be found below, in 4.5.x.

4.4.1 Drawing & Art

No titles known yet.

4.4.2 DTP, Word Processing and Text Editor

No titles known yet.

4.4.3 MIDI and Sound

No titles known yet.

4.4.4 Programming Utilities

No titles known yet.

4.4.5 Spreadsheets & Databases

No titles known yet.

4.4.6 Communications

No titles known yet.

4.4.7 Disk Magazines

No titles known yet.

4.4.8 Various (including most Utilities)

No titles known yet.

4.5.0 YES Way - This will run on STonX!

This segment features a list - as complete as we could make it - of various programs that *do* work on STonX. Where needed, hints are given on how to make programs work that may initially seem reluctant to function properly or efficiently.

4.5.1 Drawing & Art

Bitmap View 4
Imagecopy
Kandinsky
Papyrus

4.5.2 DTP, Word Processing and Text Editor

No titles known yet.

4.5.3 MIDI and Sound

No titles known yet.

4.5.4 Programming Utilities

No titles known yet.

4.5.5 Spreadsheets & Databases

No titles known yet.

4.5.6 Communications

No titles known yet.

4.5.7 Disk Magazines

No titles known yet.

4.5.8 Various (including most Utilities)

Formula (equation editor)
GEMBench (CPU check doesn't work though)
GEMView
Memfile (gets confused, but pressing both SHIFT keys will make sure it's fine)
NVDI

4.5.9 Games

No titles known yet.

4.6.0 STonX Problems...and how to solve them

This is one of the most important segments of the FAQ for STonX users - the part where practical problems are exposed and consequently - hopefully - tackled. It's divided in what is hopefully a practical structure.

4.6.1 Software Compatibility

No entries yet.

4.6.2 Programming under STonX

No entries yet.

4.6.3 Miscellaneous

Any STonX-related problems that didn't fit in either of the two previous categories will be addressed in this paragraph.

IV: STEMU

5.0 STemu

STemu is a somewhat limited ST emulator written by Jochen Frank, uk9a@rz.uni-karlsruhe.de, that emulates a bare-bones ST. It emulates an Atari STE on an MS-DOS/PC machine with an 80486 processor or better. It emulates the 68000 CPU, the standard Atari graphics resolutions, the floppy disk drive, the mouse, the keyboard and the printer port. Games don't work, as the MFP timer chip has not yet been fully implemented. It is to be doubted if ever it will, as Jochen has decided (June 1997) to stop developing it and simply make the source files available.

5.1 Where do I find the software?

http://shaw.iol.ie/~ajankows/st/stemu02.zip

5.2 Installing STemu

STemu requires that you create a directory containing all the files that come in the archive, that is, stemu.exe, dos4gw.exe, and tos.img. The only TOS that seems to run well under STemu is 1.62.

The emulator requires quite a bit of memory, so refer to the readme file included in the archive to see how to give it some virtual memory.

To run the emulator, you will either want the monochrome or the colour version.
Use either;

stemu M for the monochrome version
stemu C for the colour version

Note that it requires the M or C to be in uppercase letters, and will not work with lowercase letters.

5.4.0 No Way - What won't run on STemu

This segment features a list - as complete as we could make it - of various programs that do *not* work on STemu. Individual games (just like Falcons- specific applications such as "Rainbow") are not mentioned, as they generally do not work. Exceptions may be found below, in 5.5.x.

5.4.1 Drawing & Art

No titles known yet.

5.4.2 DTP, Word Processing and Text Editor

No titles known yet.

5.4.3 MIDI and Sound

No titles known yet.

5.4.4 Programming Utilities

No titles known yet.

5.4.5 Spreadsheets & Databases

No titles known yet.

5.4.6 Communications

No titles known yet.

5.4.7 Disk Magazines

No titles known yet.

5.4.8 Various (including most Utilities)

No titles known yet.

5.5.0 YES Way - This will run on STemu

This segment features a list - as complete as we could make it - of various programs that *do* work on STemu. Where needed, hints are given on how to make programs work that may initially seem reluctant to function properly or efficiently.

5.5.1 Drawing & Art

No titles known yet.

5.5.2 DTP, Word Processing and Text Editor

No titles known yet.

5.5.3 MIDI and Sound

No titles known yet.

5.5.4 Programming Utilities

No titles known yet.

5.5.5 Spreadsheets & Databases

No titles known yet.

5.5.6 Communications

No titles known yet.

5.5.7 Disk Magazines

No titles known yet.

5.5.8 Various (including most Utilities)

No titles known yet.

5.5.9 Games

As mentioned in the above description, it will not run any games at the moment, due to the Timer C of the MFP not yet being implemented.

5.6.0 STemu Problems...and how to solve them

This is one of the most important segments of the FAQ for STemu users - the part where practical problems are exposed and consequently - hopefully - tackled. It's divided in what is hopefully a practical structure.

5.6.1 Software Compatibility

No entries yet.

5.6.2 Programming under STemu

No entries yet.

5.6.3 Miscellaneous

Any STonX-related problems that didn't fit in either of the two previous categories will be addressed in this paragraph.

V: STIMUL

6.0 STimul

STimul is another ST emulator currently in development, though there's no release date as of yet. It is being written by Sebastien Brochet.

6.1 Where do I find the software?

Sebastien's email address is tenabiss@micronet.fr. A FAQ of his emulation package (no actual software yet) can be found at the following URL:

http://www.micronet.fr/~tenabiss/anglais/coemu_an.html

4408. File merging program needed

Newsgroup: comp.sys.atari.st
Date: 1997-06-28 00:00:00 UTC
From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.95.970628074940.11734B-100000@moose.erie.net>
Source record: 120331

I have a hundreds of small text files that I have accumulated fomr
my on-line reading the past few years. I;d like to merge them all into
one big file. I'm looking for a program that will let me select all these
files at once from a file selector, then merge them. Any suggestions?

Or GUS now.

> PacifiST emulates the
>basic ST system released by Atari. PacifiST, amazingly, is FREEWARE,

Now giftware.

> The current version is 0.44 (May 29 1997).

0.45 (June 21 1997).

>MSAtoST:
> http://www.jetman.demon.co.uk/st/index.html

Well, http://www.jetman.demon.co.uk/st/download.html really...

And STtoMSA at the same URL.

>3.4.0 No Way - What won't run on PacifiST?

The usefulness of this section is dubious; bear in mind some
programs work in one TOS version but not in others (despite
working in any TOS version on a real ST). Have you tested the
non-working programs using all available TOS versions?

>3.5.0 YES Way - This will run on PacifiST!

Also of dubious usefulness - could be better to cut this down to
only mentioning programs that need fiddling with to get them to
work?

>3.6.0 PacifiST Problems...and how to solve them

> SUNDOG
>
> Q: I've got PacifiST running great, but roughly every 20-30 minutes it
>freezes up.

This is not just Sundog. Other programs lock up too. The time
has varied (for me) between 22 and 44 minutes. Fred's been
informed. Strangely, the first report of this I heard was from
someone using 0.44, but I never had any problems until 0.45.

> KEYBOARD MAPPING
>
> Q: In gemul8r classic...

But isn't this the PaCifiST section?

>5.6.3 Miscellaneous
>
> Any STonX-related problems that didn't fit in either of the two previous
>categories will be addressed in this paragraph.

But isn't this the STemu section? :)

Seriously, the STonX and STemu sections are so empty I wonder
why they are there.

I agree to this sections dubious use.. But because v.45 is so much
better than previous versions.. all the software I have that used to
only work from image now work from PC hard Drive, for example I can
now use STOS and Compiler straight from the PC HD..(so I dont need to
save up for a HD for my ST now :<g>)
Also the software that did not work because of what seemed to be a
bug concerning access to the PC HD will now work,

IMHO this section should simply say that very little will not work
one way or another :)

>>3.5.0 YES Way - This will run on PacifiST!
>
>Also of dubious usefulness - could be better to cut this down to

I agree..the list of working titles for PaCifiST would be stupidly
long.. which of course is nice....

Same here.. I use this emulator a heck of a lot.. and this version is
the first to lock up on me,

Hi Michael,

I'm interested in the monitor. Could you let know how old it is? Also,
I don't know a lot about scan rates but I experience blockyness and
jaggedness when I play Falcon games on my current monitor(NEC 4D 16")
I'd be happy to sacrifice screen size for better resolution. BTW, I'm
just a couple hours north of you here in Seattle. Thanks,

Jim

ONLY AVAILABLE IN THE:
U.S.A, VIRGIN ISLANDS, AND PUERTO RICO CANADA*

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax,
pager, voice-mail, and cellular numbers and give them your New "Virtual Office"
800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone?
Wouldn't it be nice to be able to give everyone just ONE phone number that
will find you anywhere you are? Even out of town, or in a restaurant, or even
on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving,
Even without a fax machine! E-Mail Notification and Delivery, Without a PC!,
Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888
Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice
Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial,
Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection,
Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web site:
http://www.mynumber.com

* Based on our best priced plan.
* Canada has a higher per minute rate.

4425. TOS Emulators for Windows

Newsgroup: comp.sys.atari.st
Date: 1997-06-28 00:00:00 UTC
From: bjr@Edison.EbiCom.Net
Message-ID: <5p2247$vv5@einstein.ebicom.net>
Source record: 120411

Aloha,
Sorry to pop in with this question yet again...but I'd like
to know if anyone has found a TOS/GEM emulator for the PC that supports
True Color video, and GEM formated hard disks? If so...how well does
it work for you?
Here's my situation...I have a Falcon 030 that I love dearly
running my Audio workstation in a studio away from home. I have
a Pentium box at home that I use for internet and general home apps.
I'd like a TOS emulator so I can use some of the TOS software
at home (I.E. paint packages...DTP...etc...) for building web-pages.
I really hate the bloat that comes with PC imageing software (yet they
manage to leave out the critical features that are standard even in basic
ST art packages like grids and simple animation features).

The only demo I could get running was MagiC PC (I have no ST TOS image)
and it only seems to support the standard ST(e) video resolutions.
The main reason I'd like "GEM" partition support on the PC, is because
I could easily port sound files between platforms with my external
SCSI drive.

Thanks,
Brian

Hi Harry... I've got one question. Does that statement for all games
still apply even if you are using a multisynch monitor that scans down
to the ST's standard 15khz? Thanks in advance...! :)

Actually we are looking into TTCP for the Atari. Hisoft hasn't made any
mention of porting IBrowse. TTCP was to be able to configure with CAB.

We have run into some troubles with TTCP-Atari and will be sending out a
mailing to find out if there is enough market interest to warrent
continuing work.

Best regards,
Daniel Reichen

ps10600@cedarnet.org wrote:
: In article <5ot47o$g5i@flood.xnet.com>,

: I assume you have a Performa 6300 from your previous post in
: comp.sys.mac.advocacy. If it's a hardware issue, Apple did extend the
: warranty to seven years due to certain hardware gliches in the 6200/6300
: line. I suggest you call Apple up and ask/demand that they replace your
: mother board.

Extended to seven years heh? I could be elated or disgusted depending if
I decide that either my glass is half empty or half full. When did they
extend the warranty? It must have been recently. Thanks for the tip though
man.

This is ironic because I had just read your message after getting back
from droping it off at Computerize in Barrington, IL to have the hardware
fixed. I can still have Apple pay for the repairs though I guess.

: Or there is a extension conflict in the extension folder. Either turn
: off the extensions or get conflict catcher and that will determine
: glich.

Nope, I "wiped" the hard disk and reinstalled the OS and the CD drivers.
Actually, I'm convinced that extension conflicts are not the only OS
related goobers to happen on Macs.

: As for paying $2500 for a system, thats life.. Computers are a lousy
: investment unless you are using to earn a living. I will never spend
: that kind of money unless I am making a living off of it. If I were to
: buy a new box today would be the $950 Umax 500/180 which is faster than
: your 6300.

Oh joy. Slower than a $950 Umax and a lemon to boot, I won't be able to
get $300 for it now including monitor ":^)

: My father bought a Dell Demension xps Pentium 133 for about $2600 two
: years ago and is worth less than half today. He has used it to publish
: a book and journal articles. So the cost is justifiable..

Good for him.

: Apple is expected to bounce back this quarter with increased sales and a
: lower loss than from last quarter.

I'll believe that when I see it.

: Philip Morris has bought upto 7000 PowerBook 3400's to replace their
: aging Duo's and PowerBook 170's..

Well, I'm glad that they are getting what is best for them.

: Plus Motorola, PowerComputing and Umax are doing very well. There will
: be exciting cpu models comming out by fall called the Gossamer using the
: Arthur processors that will continue to past what ever Intel has.

Something to think about.

: > And, it looks like Raphosdy is going to be a joke. Take housepaint and
: > cottage cheese and place them in a blender and set for liquify. Mixing
: > Unix and MacOS is like mixing DNA types of beings from separate solar
: > systems. I just don't see how this thing is going to be both compatable
: > and stable.
:
: You have no idea what Rhapsody is. Rhapsody will surpass NT plus with
: ease of use in setup.

I stand my my statement.

: Rhapsody is ahead of schedule and that the upcomming Mac OS8 will be
: released on July 22.

You said software and ahead of schedule in the same sentence. I'm not
convinced that that particular tidbit was not just bullshit passed along
out the the asshole of Apple. Not that you ment to be bad here.

: > Thus, I'm going to have to monkey with it anyway. I want something that
: > does not have Hidden Behaviour-itus.
:
: Why not get your 6300 repaired and get Virtual PC..

Why not just get a PC and a Falcon. Why not have Two computers?

:
: Windows 95 is an alright upgrade for the ones who were using Wintel 3.1
: and DOS. Still not as nice as OS8..
:
: And you think the current state of TOS is Christ?

Not on your life! Do you think that MacOS and Apple are God? Maybe you
are part of the Evangelist? Well I'm a confirmed Pagan! Ha Ha He He Ho Ho.

To put it bluntly, there isn't a decent version of Forth the the Mac.
There is only one commercial Forth available for the Mac and its called
PowerMac Forth and it blows chucks. I tried it, I got my money back. It
reeked.

ForthMacs on the old AtariSt kicks its ass.

Atari has also had more than its fair share of lame Forths though.

: > Anyway, what if MacOS and Unix and WindozeXX keep sleeping together and

: > yogi?
:
: You need to get help!

Ha Ha He He Ho Ho. Super Zapper Recharge!

To keep this thread somewhat on topic, I will mention that I am posting this message with an Atari Ste via Flash and Unix Shell. This thing sure makes a great backup computer if nothing else. I'll probably keep it hooked up untill it goes kblooey. That is unless I decide to get a Falcon to take its place. It might be fun to play catchup on the Atari side somewhat. Mint VS MagiC heh?

I'm going to brouse the web for Atari Computers. ":^)

BTW, I didn't not want to imply that Mint was necessarily evil because it is a hybrid os. I haven't even tried it out yet to be rather frank.

Nostrodamus phrophesised this from Harry to hallvart@sn.no...

Hi Harry!

h>>
h>> I'm working on the setup file for the wonderful MagiC utility "Start
h>> Me Up", and currently spend a lot of time checking out file paths...
h>> Is there a utility which can automate this process by "dumping" the
h>> whole file-paths for the various files/folders to a text file so all
h>> I need to do from then on is to cut/paste into the Start Me Up setup
h>> file?

Hallvard could use Freedom, that fileselector allows pathnames to be copied
into the clipboard, from where they may be pasted into the .inf file.

HS> I've got a utility called SMUSETUP by Heiko Sch�fer, but I can't
HS> recall where I picked it up from. Possibly a link from Thomas's home
HS> patch?

I used a search engine for SMU setup and found it straightaway, however (I
don't know if this is a problem) it's in German.

Having spent a couple of hours and only partially completing the Start Me Up
config, I may spend a few minutes making some Everest kurzels to partially
automate the endless round of /menu, /file and /end statements...

Speak to 'ya later!

I'm not sure about other cards, but the NOVA is a seperate video card
with it's own connector. You can still leave a SC1224 connected and
bypass the drivers in the auto folder. If you have a monitor switch
and a multisync, run an extension cable from your RGB adapter to your
switchbox, and a VGA cable from the NOVA connector to the switchbox,
with the monitor in the middle. You could use one monitor for both
setups that way. That is how Ihad one of my Falcons setup.

4446. Falcon System 4sale

Newsgroup: comp.sys.atari.st
Date: 1997-06-29 00:00:00 UTC
From: "Daniel W. McAndrew" <mcandrdw@toad.net>
Message-ID: <01bc8422$87f90650$f6b6c5cd@simulator>
Source record: 120349

Hello, folks. I am testing the waters to see if there would be any interest in a complete system (well, almost complete) for sale.

This would include a Falcon with maximum memory (16Mbytes), original 80 Mbyte hard drive, 14 or 15" color multisynch monitor, 270 Mbyte Syquest removable external Hard drive. Tha's as far as hardware goes. Software will include a lot of high end stuff. To name a few would be Calamus SL (latest version before sold to MGI), GT Look II (scsi scanner software), Positive Image, Touch Up, Silohuette, LDW Power spreadsheet, dBMan IV database, Geneva and Neodesk 4. There is a considerable collection of software which I'd like to include with the sale - far too much to include here in this post. Oh, and HD Driver 6.0 for using external drives of almost any size. If interested, I will send a list of the apps that would be included. I would rather not parcel/break up the package as it would probably make for a better setup if it stays together. Oh, and all of the manuals would be a part of this as well.

For location, I reside in Maryland, USA, if you are interested. It would be nice if seriously interested people are somewhere here in the states as well.

I also have a Stacy computer (4 Mbytes & Adspeed accellerator w/120 Mbyte hard drive) available. While it works fine, the LCD screen occasionally dims. I have used a mono monitor which I would include for only shipping & handling if anyone may be interested in those two items.

I would like to open bidding for the Falcon package at $1200 and we will take it from there. I will not fix a price for the Stacy setup at this time but will entertain any reasonable/best offer.

Would any interested please contact me at:

mcandrdw@toad.net

Thank you. If it matters to anyone, the only reason I am doing this is that my work is increasingly demanding and now takes a more serious turn into the PC/Microsoft universe. I can no longer afford the space and time to support these other wonderful computers. Personally, I hate to see them go to waste.

Well, I haven't tried recently. This was when v960402 was released.
I tried for several weeks and then just gave up. I doesn't really
seem like being registered would've mattered that much being as the
whole idea was for his program to become more useful to greater number
of people.

: files at once from a file selector, then merge them. Any suggestions?

I don't know about one that lets you select them from a fileselector, but
if you have a UNIX box around you could simply use cat:

example% cat * > /some_place/complete-list

You don't want to put the result in the current directory since it would
then try to add the result onto itself.

4464. Oxyd on Atari 1040STE gives bus error - how to fix?

Newsgroup: comp.sys.atari.st
Date: 1997-06-29 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <Y2ZNCDE@tos.pl.net>
Source record: 120367

A member of our local Atari/TOS user group has recently purchased the game Oxyd Magnum from Toad Computers. Unfortunately the game does not seem to be working correctly on an Atari 1040STE computer.

After turning the computer on and inserting the disc in drive A, the desktop appears, with a window containing an icon marked OXYD.PRG. Double clicking on this icon, which should start the game, results in a bus error (2 bombs) occuring and the desktop reappears. The problem apparently occurs no matter how many times the above procedure is tried.

Is this a known problem? Is there any way to avoid it?

Any help would be much appreciated.

4466. POPwatch v2.01 now available

Newsgroup: comp.sys.atari.st
Date: 1997-06-29 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <10200345_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 120369
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

This new version is only required if you use POPwatch with Oasis2. In particular Oasis2.10.

There is a bug in Oasis2.10 that causes POPwatch to hang when sending emails.

Thanks to Paul Malcolm for spotting this problem :)

If you are using POPwatch 2.00 and Oasis2.10, then I strongly suggest that you get hold of POPwatch 2.01 from my web site, which works around this problem. If you aren't then don't worry about it :)

Regards, Gary

4469. New colourfull game!

Newsgroup: comp.sys.atari.st
Date: 1997-06-29 00:00:00 UTC
From: Matthias Jaap <mjaap@hsw.ifl.uni-hamburg.de>
Message-ID: <33B75157.6734@hsw.ifl.uni-hamburg.de>
Source record: 120372

Hi there!

I have released a colourfull game (256 colours) for all TOS
computers. It's a Dr. Who quiz but even if you don't know the series
you might check this game out. There is also some music (mod file)
that can be played if you have installed Paula. The program itself
is a clean GEM application.

Hardware requirements:
- 1 MByte
- 256 colour mode
- 640*400 or higher
- system must support colour icons

It won't run in resolutions which offer less than 256 colours.

The page:
http://www.hh.schule.de/hhs/mjaap/who.htm

Greets,
Matthias.

4470. Trying to find C&R Systems (or whoever controls BBS! Express now)

Since my efforts to find source code for my favourite old
BBS games and BBS systems has resulted in little fruit... do you think
people would like a rewritten BBS system, engineered in the style of
the merry old days... A BBS emulator, as it were. People could telnet
to it.. say, I'd make it parallel, and allow say 10 or 20 people at a
time. Have arbitrary kick-off periods (say, max time of 30 mins a day),
and the like. Menus, message bases (non networked, of course...),
download areas. Really bad games.

Do you think people woudl actually use it? For uber-wank value? :P

Jeff

Retrocomputers, I know. I write arcade emulations... I know :)
I'll try and watch the group.. but respond in email or both
if you could. I'm terrible busy :(

4476. **** NEW STIK WEB PAGE ****

Newsgroup: comp.sys.atari.st
Date: 1997-06-29 00:00:00 UTC
From: quantum@sunlink.net
Message-ID: <5p6j55$nbm@mars.sunlink.net>
Source record: 120379

There's a brand new web page featuring software for the Atari
Internet. Visit http://www.sunlink.net/~quantum/ for the latest in STiK,
STiNG, and all of their compatable software. Atari Intenet if updated
frequently, so you won't have to wait for the latest and the best of
software for the Internet.

Again, that page is:------> http://www.sunlink.net/~quantum/

I look forward to seeing you there, and I hope it becomes your source
for the latest of Atari Intenet software.

Sincerely,
George Garner, Atari Internet

Dear Internet user,

If you are paying for your Internet services then you have
not heard about 1stFamily. We have a marketing method
that guarantees you will not have to pay one dollar to
access the Internet.

* You will never again have a busy signal !

* You will always have the fastest access you have ever seen !

* Residual income for the rest of your life !

* and much much more.

This opportunity is for YOU to take advantage of !

Do you wish to continue the rest of your life paying $19.95/month
to access the Internet when you can access it for free with speed
and reliability that exceeds the other competitors ??? We did not
think so. That is why our company is the best and fastest growing
of it's kind and will soon compete with AT&T and MCI and all the
big companies in providing Internet Service.

For complete information please mailto:ASE1000@1stfamily.com
and type "More Info" in the subject box.

You will receive our webpage address where you can get enrolled in
seconds !!

There isn't an interface - just a printer driver and a DMA lead.

Sure, but it's not too hard doing it manually. The error messages after
rebooting are a slow way of checking things out, but they're informative
enough to sort out the problems.

Hi Roland, on 26 Jun 97 you wrote: ...respect, brethren
p>
p> The version I have has a 1MB video memory. Taking into account that
p> it needs 4 bits for 16 colors, 8 bits for 256 colors, 16 bits for
p> high color and 24 bits for true color, it is easy to calculate the
p> maximum theoretical resolution that you can obtain for a given number
p> of colors. I use routinely 1024x768 in 256 colors, however 1152x864
p> works also, for example.

Using an 80MHz dot clock, theoretically you should be able to obtain a
resolution of 1184*880 @ 256 colours, giving a horizontal frequency of 54kHz
and a vertical of 58Hz.

Remember, 1Mb is 1024 * 1024 bytes = 1,048,576 bytes.

u>
u> Is there some program which would help me to rename and move files
u> and directories? I want to organize my disk better without deleting
u> the files and writing them once again.

In what way do you mean? I think I understand, but could you make it clearer?

If you mean you wnat to change filenames that follow one sort of fil-pattern
and automatically copy and rename them to a different file pattern I have
done it with Jeremy Hughes' Trimfont that comes as part of the Fontkit pac

Otherwise I'd imagine you need some kind of CLI package.

Please explain further...

: this group?

Ummm...I think he made an honest mistake...meant to email it to me
I'm sure, and hit the wrong reply key perhaps?

At any rate, I didn't get the mail he refered to, and I guess my
news server doesn't get his posts, (I've noticed my server misses
a lot of stuff...how/why?). In fact, the only refrence to his post I
got at all was what Hallavard pasted in his reply.

I've heard about TOS2WIN before...anyone know the URL I can find it?
Hopefuly an ENGLISH one or it's no good to me. I've tried messing
with "non english" software before, and it cost me a LOT of time
fixing my hard disk, as I wasn't able to follow the directions correctly
and did something wrong :/

Anyway...Hallavard...sorry this thread ended up causing problems on
your end. I do think the guy made an "honest mistake". It CAN and
does happen to all of us at times.

4489. Lowest INTERNATIONAL Calling RATES Available !!

Newsgroup: comp.sys.atari.st
Date: 1997-06-30 00:00:00 UTC
From: remove@freemail.nll
Message-ID: <5p7fsp$945$2741@cadmium.aware.nl>
Source record: 120293

We offer very competitive low international calling rates worldwide, with saving up to 85% !!!

Some examples:

Australia - USA = 0.29 US$/minute
Hong Kong - UK = 0.61 US$/minute
New Zealand - Netherlands = 0.66 US$/minute
Japan - Germany = 0.61 US$/minute
Singapore - USA = 0.35 US$/minute
Sweden- Canada = 0.36 US$/minute
Germany- Dom Rep =0.71 US$/minute
France - Bahamas = 0.60 US$/minute

There are no fees, other than usage !!

If you might be interested in more information on our services and rates to other countries, please visit our website at http://www.angelfire.com/biz/GTconsult or send us a message to GTconsult@freemail.nl and tell us the countries you call now, what you are paying now and which service you use at the moment !!

If you think this is not the appropriate newsgroup to place this advert, please let us know by sending an e-mail to remove@freemail.nl and mention the newsgroup in the subject heading, so that in future we will not advertise in this newsgroup again !!

There is so much going on now, that you would soon forget the other two
worlds (unless your into Amigas:). It took a little work, but I have my
Falcon with an 040 chip, 68mb's of 32bit ram, a 4mb ATI Graphics Pro Turbo
installed all in a rack mount case. This sucker is awsome for a toy:).
Guaddam thing dosen't even resemble the thing that came in the plastic
case (but I do miss the protability. That is why I have three:). I'd post
a benchmark, but what the hell, it dosen't mean anything. It fast for what
I want. Cripes, if someone gets an 060 up and going.....

Drop what I said about getting MagiC Mac:). Orderup one of these burgers:)

4493. BJ-200 Driver for Calamus S?

Newsgroup: comp.sys.atari.st
Date: 1997-06-30 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@sunderland.ac.uk>
Message-ID: <33B77B77.815C0F42@sunderland.ac.uk>
Source record: 120297

Hi,

Does anyone know where I can get a Canon BJ-200ex compatible printer driver for Calamus S? The BJ compatible drivers that come with Calamus S do not have support for A4 size pages which I need.

I am currently using a driver that worked with Calamus 1.09 but does not work correctly with Calamus S. Calamus S drivers have a CPD extension but it still loaded the 1.09 driver with the CPT extension, however it does not send a form feed at the end of each page and seems to take much longer to start printing. Obviously I need a driver that is written specifically for Calamus S.

Thanks for any help,

Michael

Michael, I'm with you on this. I have ver 1.09 and I can't print a
14"x8.5" page. It wouldn't print (14 X 8.5) on the Canon BJ-200ex
or HP

Hi Mario,
I had the same problem a while ago. After some searching I figured
out that starting oxyd causes a bus error when some accessories are loaded.
I got this error when controlpanel or ledpanel or park_hd was loaded.
Xcontrol seems to be no problem.
You may check out which ACC's or other programs (via AUTO-folder) are loaded
before running oxyd. If neccessary, remove them.

Hope this helps...
Martin.

BTW: What TOS are you running? I heard rumours that oxyd won't run under
anything newer than 1.04 (I'm running 1.02 so I can't confirm)

Source record: 120307

Hello!
It's been written many times about reading ST disks on a PC, and it is already a part of the FAQs. Now I've noticed something with Unix's mtools. mtools is a set(? sorry, poor english) of programs (wdir, mcopy, ...) to read MS-DOS disks on a Unix system (or maybe XWindows?). At least at the computers I am working with, there are disks which *are readable from DOS* machines, but they cause an "wrong FAT" message with mtools. I thing this version of mtools that they have here looks for a certain FAT length. I think so, because all these diskettes had a 5-sector FAT, while I didn't have the problem with diskettes with a 3-sector FAT. (In my case, 720K disks from TOS 1.02, but formatted with other programs).
I could try to convert the information on the diskettes, but since they were three or four, it was easier to format them again with another program that produced 3 sector long FATs.

: p> of colors. I use routinely 1024x768 in 256 colors, however 1152x864
: p> works also, for example.
:Using an 80MHz dot clock, theoretically you should be able to obtain a
:resolution of 1184*880 @ 256 colours, giving a horizontal frequency of 54kHz
:and a vertical of 58Hz.
:Remember, 1Mb is 1024 * 1024 bytes = 1,048,576 bytes.
^^^^^^^^^^^^^^^
Ho well, Harry, thanks a lot for the information!!! However, I happened
to know that...
I mentioned this figure of 1152x864 as an example only.
Because it was the highest I've found that fits in the 1024*1024 bytes
AND respects the same horizontal/vertical ratio as 1024x768, which occupies
best the space on my multisync screen, AND is at the limit of readability for
the 6x6 system font on that screen (1168x876 is almost unusable).

Cheers.

Roland

4510. TOS output from GEM (was: Are pipes and Pause key combinations possible (TOS)?)

Newsgroup: comp.sys.atari.st
Date: 1997-06-30 00:00:00 UTC
From: Guentcho Skordev <ut13@ab103.rz.uni-karlsruhe.de>
Message-ID: <5p90qcjek1@nz12.rz.uni-karlsruhe.de>
Source record: 120314

Another similar question.
Here is what happens with a lot of .TOS and .TTP programs: they produce a page or few lines of output, then they end and the desktop is restored. This goes fast and I can't read anything. I guess that it would be better with a shell. But is there another way to change it?
Mega ST, TOS 1.02

Regards
Guentcho

I wrote one for my own personal use.
First you select destination file, then you add one file at a time.
All done with the file selector.
It does not handle multiple file selection though.
I could make it available...

The story so far...

I went to a friend's house(one of the few Atari users in the area)
and got a copy of the TOS 1.0 boot disk. My question is, how can
load the TOS.IMG file into the 1040STe? I know that on the old 520
ST's they had a bootstrap program for loading TOS on a disk.

Please someone help me as I very much like to play Starglider after
paying $5 for it...
